

Question 4 (translated from French):

"The wind conditions must be evaluated using at least one meteorological mast for each wind farm being proposed."

Is it necessary to understand that each bid has to use a different mast? Can the same mast be used for two independent bids which are near each other?

Answer 4:

It is not necessary to use a different meteorological mast for every bid.

If the bidder presents two (2) bids on sites near one another, he can use the same meteorological mast by making sure however that the distance with the meteorological mast does not exceed 2 km of the closest wind turbine for each of the offered projects.
