

INFO-TRAVAUX

Start of construction on the 120-kV Langlois–Vaudreuil–Soulanges line **February 2017**

The project

Hydro-Québec has begun construction on the new Langlois–Vaudreuil–Soulanges line, to meet the growing demand for electricity in the Vaudreuil–Soulanges region.

This project, valued at \$45 million, involves building a new 120-kV transmission line between Les Cèdres and Dorion substations, and dismantling and rebuilding part of the line between Dorion and Vaudreuil–Soulanges substations.

In addition, the construction of a line segment for supplying the Ericsson facility in Vaudreuil–Dorion, which was announced as part of the current project, will be carried out in the coming years, based on the growth of the customer's needs.

Work

The work includes the following:

- Clearing required for the right-of-way of the new line between Les Cèdres and Dorion substations
- Clearing within the boundaries of the existing right-of-way for the reconstruction of the line between Dorion and Vaudreuil–Soulanges substations
- Construction of access roads
- Dismantling the line on wooden H-frames between Dorion and Vaudreuil–Soulanges substations

- Laying of foundations: excavation, filling and leveling
- Tower assembly and conductor unwinding
- Site restoration

Compliance monitoring

During the construction period, a Hydro-Québec environment specialist will be onsite to monitor the project's progress and ensure that the work is carried out with due respect for the environment.

The environment specialist will also be in charge of maintaining constant communication with affected landowners.

Project schedule

Construction will start in February 2017 and continue until October 2017.

Work will be carried out from Monday to Friday, between 7:00 a.m. and 5:30 p.m.
