Autumn 2026

Tour of the Côte-Saint-Luc substation construction site

Côte-Saint-Luc – At the end of September, Hydro-Québec's teams welcomed Côte-Saint-Luc mayor David Tordjman and key officials of the municipal administration to the site of Côte-Saint-Luc substation, which is currently under construction.

During the tour, Mr. Tordjman had an opportunity to observe the progress made on the project. The excavation work was completed this past summer. In the meantime, construction of the concrete foundations will commence this fall, followed by the erection of the building structure in the spring, marking the beginning of a new phase of the project.

"We are encouraged by the progress of the work, which demonstrates Hydro-Québec's commitment to ensuring service quality in Côte-Saint-Luc. Despite the inconveniences, residents understand the importance of this strategic location, which will reduce the number of outages in the long term."

David Tordjman, mayor of Côte-Saint-Luc

"Improving service quality in the Côte-Saint-Luc area is dependent on the invaluable cooperation of the City, our partners and the residents who live near the site. We communicate with them on an ongoing basis and are grateful for their patience and understanding while the work is carried out."

Francis Boucher, Advisor – Regional Affairs – Montréal

The tour was organized following the increased activity in the project's preparatory work, which was announced last winter, to improve service quality and bolster the system's capacity in the Côte-Saint-Luc, Côte-des-Neiges–Notre-Dame-de-Grâce, Hampstead and Montréal-Ouest areas.
The project includes:

- construction of Côte-Saint-Luc substation
- construction of a 315-kV transmission line approximately 18 km in length
- conversion of the distribution system to a higher voltage, in parallel with the construction work
