

2025 Electricity Rates

Effective April 1, 2025

**Hydro-Québec's electricity rates for its electricity
distribution activities, effective April 1, 2025**

Established in accordance with Schedule 1
of the *Hydro-Québec Act*

Legal deposit, Bibliothèque et Archives
nationales du Québec, 2nd quarter 2025

CHAPTER 1

INTERPRETATIVE PROVISIONS

Definitions

1.1

In these *Electricity Rates*, the following terms and expressions have the meanings ascribed below, unless the context indicates otherwise:

Act respecting health services and social services: The Québec *Act respecting health services and social services* (CQLR, chapter S-4.2).

annual contract: A contract with a term of at least 12 consecutive monthly periods.

apartment building: All or part of a building comprising more than one dwelling.

available power: The amount of power which the customer may not exceed for a given contract without the authorization of Hydro-Québec.

commercial activity: Any activity involved in the marketing or sale of products or services.

common areas and collective services: Areas and services of an apartment building, community residence or rooming house that are used exclusively by the occupants of such apartment building, community residence or rooming house.

community residence: A private building or part of a private building which is for habitation purposes, contains dwellings or rooms, or both, that are rented or allocated to different people, and has common areas and collective services. Also considered to be community residences, for purposes of these *Rates*, are intermediate resources, as defined in the *Act respecting health services and social services*, that meet the criteria stated in this paragraph.

connected load: That part of the installed capacity which is connected to the Hydro-Québec system.

connection point: The point where the electrical installation is connected to the line. When there is a distribution service loop, the connection point is the point where the customer's service entrance and the distribution service loop meet.

consumption period: A period during which electricity is delivered to the customer and which extends between the two dates used by Hydro-Québec for calculation of the bill.

contract: An agreement entered into between a customer and Hydro-Québec for electricity service and the delivery of electricity.

customer: An individual or body corporate, including a partnership, an agency acting through its agent or an organization, that is responsible for one or more electricity service contracts.

delivery of electricity: The application and maintaining of voltage at the delivery point, whether or not electricity is consumed.

delivery point: The point at which Hydro-Québec delivers electricity and from which the customer may use such electricity, located immediately on the load side of Hydro-Québec's metering equipment. In cases where Hydro-Québec does not install metering equipment, or where such equipment is located on the supply side of the connection point, the delivery point is the connection point.

demand charge: An amount to be paid, depending on the rate, per kilowatt of billing demand.

distribution service loop: Any portion of a power line not located along a public highway, extending the Hydro-Québec system to the connection point.

domestic rate: A rate at which the electricity delivered for domestic use, i.e., exclusively for habitation or farming purposes, is billed under the conditions set forth in these *Rates*.

domestic use: The use of electricity exclusively for habitation or farming purposes.

dwelling: Private living quarters equipped with lodging and eating facilities, including in particular a kitchen or kitchenette, along with a private entrance and a complete sanitary facility, in which the occupants have free access to all rooms. A complete sanitary facility consists of a sink, a toilet and a bath or shower.

electricity: The electricity supplied by Hydro-Québec.

electricity management system: Operational and material means implemented by the customer to optimize their electricity use on an ongoing basis.

electricity service: The application and maintaining of voltage at the connection point, at a frequency of approximately 60 hertz.

farm: Land, buildings and equipment used to raise crops or livestock, excluding any dwelling or any facility used for industrial or commercial activity.

flat rate: A rate comprising only a fixed amount to be paid for a fixed period, regardless of the amount of energy consumed.

general rate: A rate at which the electricity delivered for general use is billed, except in cases where another rate is explicitly provided for in these *Rates*.

general use: The use of electricity for all purposes other than those explicitly provided for in these *Rates*.

Hydro-Québec: Hydro-Québec in its electricity distribution activities.

independent producer: A producer of electrical power who either consumes for their own needs or sells all or part of the electrical power they produce to one or more third parties or to Hydro-Québec.

industrial activity: Any activity involved in the manufacture, assembly or processing of merchandise or food products, or the extraction of raw materials.

installed capacity: The total rated capacity of the customer's electrical equipment.

in writing: Any communication sent to Hydro-Québec by the customer via the Hydro-Québec website, including the Customer Space, or via email, regular mail or fax, and to the customer by Hydro-Québec via the Customer Space, email, regular mail, fax or any other method agreed upon with the customer.

lumen: A unit of measurement, to within 15%, of the average luminous flux of a bulb during its useful life, as specified by the manufacturer.

luminaire: An outside lighting fixture fitted to a pole and comprising, unless otherwise indicated, a support no more than 2.5 metres in length, a reflector inside a metal housing, a bulb, a diffuser and, in some instances, a photoelectric cell.

maximum power demand: A value which, for application of these *Rates*, is expressed in kilowatts and corresponds to the higher of the following values:

- the highest real power demand in kilowatts, or
- 90% of the highest apparent power demand in kilovoltamperes for domestic and small- and medium-power contracts, or 95% for large-power contracts.

These power demands are determined for integration periods of 15 minutes, by one or more types of metering equipment approved by the competent authorities. If the characteristics of the customer's load so justify, only the metering equipment needed for billing is kept in service.

mixed use: Use of electricity both for habitation or farming purpose and for other purposes under a single contract.

monthly: Relating to a period of 30 consecutive days.

multiplier: The multiplication factor applied to the system access charge, to the number of kilowatts used to determine the base billing demand, and to the number of kilowatthours to which the first-tier energy price of certain domestic rates applies.

municipal system: A power system operated by a municipality or by the Coopérative régionale d'électricité de Saint-Jean-Baptiste-de-Rouville, and supplied by Hydro-Québec.

off-grid system: A system for the generation and distribution of electricity that is not connected to the bulk system.

power:

- a) small power: a demand that is billed only if it exceeds 50 kilowatts;
- b) medium power: a minimum billing demand of less than 5,000 kilowatts;

c) large power: a minimum billing demand of 5,000 kilowatts or more.

public lighting: Lighting of streets, lanes, roads, highways, expressways, bridges, wharves, bicycle paths, pedestrian walkways, and other public thoroughfares, but excluding parking lots, playgrounds and similar places.

rate: The set of prices, their conditions of application and the calculation methods that apply to the billing of electricity and services supplied by Hydro-Québec under a contract.

Rates: The document that sets forth the electricity rates of Hydro-Québec in its electricity distribution activities, as approved by the Régie de l'énergie.

residential outbuilding: Any building or installations appurtenant to premises used for habitation purposes; farms are excluded from this definition.

rooming house: A building or part of a building devoted exclusively to habitation purposes, in which lodgings, each of no more than 2 rooms and not constituting a dwelling, are let to different occupants.

short-term contract: A contract with a term of less than 12 consecutive monthly periods.

summer period: The period from April 1 through November 30, inclusive.

system access charge: A set amount to be paid for each contract for a given period, regardless of the amount of electricity consumed.

Tourist Accommodation Act: The Québec *Tourist Accommodation Act* (CQLR, chapter H-1.01).

voltage:

a) low voltage: nominal phase-to-phase voltage not exceeding 750 volts;

b) medium voltage: nominal phase-to-phase voltage of more than 750 volts, but less than 44,000 volts. The term 25 kilovolts (kV) means three-phase voltage at 14.4/24.94 kV, grounded wye;

c) high voltage: nominal phase-to-phase voltage of 44,000 volts or more.

weekly contract: A contract with a minimum term of 7 consecutive days.

winter period: The period from December 1 of one year through March 31 of the next year, inclusive.

Units of measurement

1.2

For the application of these *Rates*, power and real power are expressed in kilowatts (kW), apparent power in kilovoltamperes (kVA) and energy (consumption) in kilowatthours (kWh).

When the unit of power is not given, power is understood to be expressed in kilowatts.

CHAPTER 2

DOMESTIC RATES

SECTION 1

GENERAL PROVISIONS

Application of domestic rates **2.1**

The domestic rates apply only to contracts under which electricity is delivered for domestic use, apart from the exceptions provided for in this chapter.

Installation of maximum-demand meter **2.2**

In the case of a contract at a domestic rate, Hydro-Québec installs a maximum-demand meter when the electrical installation is such that the maximum power demand is likely to exceed 50 kilowatts.

Choice of rate **2.3**

Unless otherwise provided for in these *Rates*:

- a) A customer with a domestic contract may choose between any of the domestic rates for which the contract is eligible, subject to the conditions of application, and the applicable general rate;
- b) A customer with a domestic contract may submit a request in writing for a change of rate during the term of the contract. The change of rate takes effect, at the customer's discretion, either at the beginning of the consumption period during which Hydro-Québec receives the written request, at the beginning of the previous consumption period or at the beginning of any subsequent consumption period;
- c) In the case of a new domestic contract and only during the first 12 monthly periods, the customer may, only once, request a change of rate that would take effect at the beginning of the contract or at the beginning of any one of the consumption periods preceding the request.

To obtain a change of rate under this subparagraph, the customer must submit a request to Hydro-Québec in writing before the end of the 14th monthly period following the date of the beginning of the contract.

SECTION 2

RATE D

Application **2.4**

Domestic Rate D applies to a contract for domestic use in a dwelling where the electricity is metered separately and the maximum power demand was less than 65 kilowatts during the 12 consecutive monthly periods ending at the end of the consumption period in question.

Barring provisions to the contrary, it does not apply:

- a) to youth or general tourist accommodation establishments covered in the *Tourist Accommodation Act* and its implementing regulation;
- b) to establishments covered in the *Act respecting health services and social services*.

Structure of Rate D **2.5**

The structure of Rate D for a weekly contract is as follows:

- 46.154¢ system access charge for each day in the consumption period
- plus
- 6.905¢ per kilowatthour for energy consumed, up to the product of 40 kilowatthours and the number of days in the consumption period, and
- 10.652¢ per kilowatthour for the remaining consumption.

If applicable, the credit for supply, as described in Article 12.3, applies.

Change from Rate D to Rate DP for a contract with a maximum power demand of at least 50 kilowatts but less than 65 kilowatts **2.6**

Each year, after the new rates come into effect on April 1, Hydro-Québec will determine if it would be more advantageous for the customer to change to Rate DP.

Hydro-Québec will automatically replace Rate D by Rate DP as of the consumption period beginning on or after April 1 of the current year if, for the 12 consecutive monthly periods immediately preceding this period, the following conditions are met:

- a) The maximum power demand under the contract was at least 50 kilowatts but less than 65 kilowatts;
- b) Applying Rate DP yields savings of at least 3% on the customer's electricity bill in comparison to the amount payable under Rate D, based on the new prices in effect.

A customer whose rate is changed by Hydro-Québec under this article may, once only, choose another rate for which the contract is eligible. The rate change request must be sent to Hydro-Québec before the end of the 3rd monthly period after the rate was changed by Hydro-Québec. The change takes effect at the beginning of the period during which the rate was changed by Hydro-Québec.

If a customer whose rate has been changed requests to see the details of the optimization analysis, Hydro-Québec shall provide this information before the end of the consumption period following the period when the request was received.

Change from Rate D to Rate DP for a contract with a maximum power demand of 65 kilowatts or more 2.7

When the maximum power demand reaches or exceeds 65 kilowatts, the contract ceases to be eligible for Rate D. It then becomes subject to Rate DP, which applies as of the beginning of the consumption period during which the maximum power demand reached or exceeded 65 kilowatts.

Apartment building, community residence or rooming house 2.8

On condition that the electricity is exclusively for habitation purposes, including in the common areas and for collective services, Rate D also applies when the electricity is delivered to:

- a) a dwelling of an apartment building or a community residence consisting of dwellings, where there is separate metering;

- b) the common areas and collective services, if they are metered separately;
- c) a rooming house or community residence with rooms only. If it includes 10 rooms or more, its construction must have begun on or after April 1, 2008;
- d) an apartment building where there is bulk metering and whose construction began on or after April 1, 2008;
- e) a community residence consisting of dwellings, or both dwellings and rooms, where there is bulk metering and whose construction began on or after April 1, 2008.

When the electricity is not exclusively for habitation purposes, Rate D applies in accordance with the provisions of Article 2.12.

Bed and breakfast or tourist home 2.9

Rate D applies to a contract for electricity delivered to a dwelling operated as a bed and breakfast as defined in the *Tourist Accommodation Act* and its implementing regulation.

Rate D also applies to a contract for electricity delivered to a dwelling operated as a tourist home as defined in the *Tourist Accommodation Act* and its implementing regulation.

If the bed and breakfast or tourist home does not meet these conditions, Rate D applies in accordance with the provisions of Article 2.12.

Accommodations in a foster family or a foster home 2.10

Rate D applies to a contract for electricity delivered to a dwelling where 9 or fewer persons are accommodated in a foster family or a foster home as defined in the *Act respecting health services and social services*.

Residential outbuildings 2.11

Rate D applies to a contract for electricity delivered to one or more residential outbuildings, provided that each meets the following two conditions:

- a) The outbuilding is used exclusively by the persons occupying the dwelling or apartment building;

b) It is used exclusively for purposes related to those of the dwelling or apartment building.

In all other cases, the electricity delivered to a residential outbuilding is subject to the appropriate general rate.

Mixed use **2.12**

When the electricity is not exclusively for habitation purposes, Rate D applies on condition that the installed capacity for purposes other than habitation does not exceed 10 kilowatts. If the installed capacity for purposes other than habitation exceeds 10 kilowatts, the appropriate general rate applies.

In determining the installed capacity for purposes other than habitation, any central water heating, space heating or air conditioning equipment for both habitation and other purposes is not considered.

Farms **2.13**

Electricity supplied to a farm is subject to a domestic rate.

Electricity not directly used for a dwelling, residential outbuildings or the farm is measured by an additional meter and billed at the appropriate general rate.

If there is no additional meter, Rate D applies only when the installed capacity of the premises, other than the dwelling, the residential outbuildings and the farm, does not exceed 10 kilowatts. If the installed capacity of the premises exceeds 10 kilowatts, the appropriate general rate applies.

.....

SECTION 3

RATE DP

Application **2.14**

Domestic Rate DP applies to a contract for domestic use in a dwelling where the electricity is metered separately and the maximum power demand was at least 50 kilowatts during one of the 12 consecutive monthly periods ending at the end of the consumption period in question.

Rate DP also applies to the exceptions provided for in articles 2.8 to 2.13 if the maximum power demand was at least 50 kilowatts during one of the consumption periods included in the 12 consecutive monthly periods ending at the end of the consumption period in question. Barring provisions to the contrary, it does not apply:

- a) to youth or general tourist accommodation establishments covered in the *Tourist Accommodation Act* and its implementing regulation;
- b) to establishments covered in the *Act respecting health services and social services*.

Structure of Rate DP	2.15
-----------------------------	-------------

The structure of Rate DP for a weekly contract is as follows:

6.678¢ per kilowatthour, up to 1,200 kilowatthours per monthly period, and

10.153¢ per kilowatthour for the remaining consumption

plus a monthly charge of

\$5.213 per kilowatt of billing demand in excess of 50 kilowatts during the summer period, or

\$7.054 per kilowatt of billing demand in excess of 50 kilowatts during the winter period.

When a consumption period overlaps with the beginning or end of the winter period, the demand charge is prorated according to the number of days in the consumption period that fall within the summer period and the winter period, respectively.

The minimum monthly bill is \$13.833 when single-phase electricity is delivered or \$20.750 when three-phase electricity is delivered.

If applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4, apply.

Billing demand **2.16**

The billing demand at Rate DP is equal to the maximum power demand during the consumption period in question, but is never less than the minimum billing demand as defined in Article 2.17.

Minimum billing demand (interim provision) **2.17**

The minimum billing demand for any given consumption period is equal to 65% of the maximum power demand during a consumption period that falls wholly within the winter period included in the 12 consecutive monthly periods ending at the end of the consumption period in question.

For a change to Rate DP from Rate DT or a general rate, the minimum billing demand is determined as specified in this article.

When a customer terminates a weekly contract and signs another for the delivery of electricity at the same location and for similar purposes within the following 12 consecutive monthly periods, these two contracts are considered to be a single contract for calculation of the minimum billing demand.

Change from Rate DP to Rate D for a contract with a maximum power demand of at least 50 kilowatts but less than 65 kilowatts **2.18**

Each year, after the new rates come into effect on April 1, Hydro-Québec will determine if it would be more advantageous for the customer to change to Rate D. Hydro-Québec will automatically replace Rate DP by Rate D as of the consumption period beginning on or after April 1 of the current year if, for the 12 consecutive monthly periods immediately preceding this period, the following conditions are met:

- a) The maximum power demand under the contract was at least 50 kilowatts but less than 65 kilowatts;
- b) Applying Rate D yields savings of at least 3% on the customer's electricity bill in comparison to the amount payable under Rate DP, based on the new prices in effect.

A customer whose rate is changed by Hydro-Québec under this article may, once only, choose another rate for which the contract is eligible. The rate change request must be sent to Hydro-Québec before the end of the 3rd monthly period after the rate was changed by Hydro-Québec. The change takes effect at the beginning of the period during which the rate was changed by Hydro-Québec.

Change from Rate DP to Rate D for a contract with a maximum power demand of less than 50 kilowatts 2.19

If the maximum power demand was less than 50 kilowatts during the 12 consecutive monthly periods ending at the end of the consumption period in question, the contract ceases to be eligible for Rate DP. It then becomes subject to Rate D, which applies as of the beginning of the consumption period in question.

Installation of maximum-demand meter 2.20

Hydro-Québec installs a maximum-demand meter for all Rate DP contracts in order to measure the maximum power demand.

SECTION 4

RATE DM

Application 2.21

Domestic Rate DM applies only to a contract which was eligible for it on May 31, 2009, and for which electricity is delivered to an apartment building or a community residence consisting of dwellings where there is bulk metering.

Barring provisions to the contrary, it does not apply:

- a) to youth and general tourist accommodation establishments covered in the *Tourist Accommodation Act* and its implementing regulation;
- b) to establishments covered in the *Act respecting health services and social services*.

Community residence consisting of dwellings and rooms, or community residence or rooming house with 10 rooms or more **2.22**

On condition that the electricity is exclusively for habitation purposes, including the electricity for common areas and collective services, Rate DM also applies when the electricity is delivered to:

- a) a community residence consisting of dwellings and rooms, where there is bulk metering;
- b) a rooming house or community residence with 10 rooms or more.

When the electricity is not exclusively for habitation purposes, Rate DM applies in accordance with the provisions of Article 2.28.

Structure of Rate DM **2.23**

The structure of Rate DM for a weekly contract is as follows:

- 46.154¢ system access charge for each day in the consumption period, times the multiplier,
plus
- 6.905¢ per kilowatthour for energy consumed, up to the product of 40 kilowatthours, the number of days in the consumption period and the multiplier, and
- 10.652¢ per kilowatthour for the remaining consumption
plus a monthly charge of
- \$7.054 per kilowatt of billing demand in excess of the base billing demand.

If applicable, the credit for supply, as described in Article 12.3, applies.

Billing demand **2.24**

The billing demand at Rate DM is equal to the maximum power demand during the consumption period in question, but is never less than the minimum billing demand as defined in Article 2.25.

Minimum billing demand (interim provision) 2.25

The minimum billing demand for any given consumption period is equal to 65% of the maximum power demand during a consumption period that falls wholly within the winter period included in the 12 consecutive monthly periods ending at the end of the consumption period in question.

For a change to Rate DM from Rate DT or a general rate, the minimum billing demand is determined as specified in this article.

When a customer terminates a weekly contract and signs another for the delivery of electricity at the same location and for similar purposes within the following 12 consecutive monthly periods, these two contracts are considered to be a single contract for calculation of the minimum billing demand.

Base billing demand 2.26

The base billing demand is the higher of the following values:

- a) 50 kilowatts or
- b) 4 kilowatts times the multiplier.

Multiplier 2.27

The multiplier is determined as follows:

a) Apartment building or community residence consisting of dwellings:

Number of dwellings in the apartment building or community residence.

b) Community residence consisting of dwellings and rooms:

Number of dwellings in the community residence

plus

1 for the first 9 rooms

plus

1 for each additional room.

c) **Rooming house or community residence with 10 rooms or more:**

1 for the first 9 rooms

plus

1 for each additional room.

Mixed use

2.28

When the electricity is not exclusively for habitation purposes, Rate DM applies on condition that the installed capacity for purposes other than habitation does not exceed 10 kilowatts. In such cases, the multiplier, as defined in Article 2.27, is incremented by 1.

If the installed capacity for purposes other than habitation exceeds 10 kilowatts, the appropriate general rate applies.

In determining the installed capacity for purposes other than habitation, any central water heating, space heating or air conditioning equipment for both habitation and other purposes is not considered.

SECTION 5

RATE DT

Application

2.29

Rate DT applies to a contract eligible for one of the domestic rates when the customer uses a dual-energy system that meets the conditions stipulated in Article 2.31.

In that case, Rate DT applies to all of the customer's consumption.

Definition

2.30

In this section, the following definition applies:

dual-energy system: A central system used for the heating of space and water, and designed in such a way that electricity can be used as the main heating source and a fuel as the auxiliary source.

Characteristics of the dual-energy system**2.31**

The dual-energy system must meet all of the following conditions:

- a) The capacity of the dual-energy system in fuel mode must be sufficient to heat the premises in question. The energy sources of the dual-energy system must not be used simultaneously;
- b) The dual-energy system must be equipped with an automatic switch permitting transfer from one source of energy to the other. For this purpose, the automatic switch must be connected to a temperature gauge in accordance with the provisions of subparagraph c) hereinafter;
- c) The temperature gauge is supplied and installed by Hydro-Québec in a location and under conditions which Hydro-Québec determines. The gauge indicates to the automatic switch when a change of operating mode is required in view of the outdoor temperature. The fuel mode is used when the outdoor temperature is below -12°C or -15°C , depending on the climate zones defined by Hydro-Québec;
- d) The customer may also use a manual switch to change from one source of energy to the other.

Sign up for Rate DT**2.32**

To sign up for Rate DT, the customer must submit an application to Hydro-Québec in writing by completing the *Certificate of Eligibility - Dual Energy* form available at www.hydroquebec.com.

The customer must notify Hydro-Québec of any change made to the dual-energy system during the term of the contract that would render it ineligible for Rate DT.

Recovery after a power failure**2.33**

The dual-energy system may be equipped with a device that, after a power failure, makes it possible for the dual-energy system to operate, for some time, on the auxiliary energy source only, regardless of the outdoor temperature. The device must meet Hydro-Québec's requirements.

Structure of Rate DT**2.34**

The structure of Rate DT for a weekly contract is as follows:

- 46.154¢ system access charge for each day in the consumption period, times the multiplier,
plus
- 4.963¢ per kilowatthour for energy consumed when the temperature is equal to or higher than -12°C or -15°C, depending on the climate zones defined by Hydro-Québec, and
- 29.018¢ per kilowatthour for energy consumed when the temperature is below -12°C or -15°C, as applicable,
plus a monthly charge of
- \$7.054 per kilowatt of billing demand in excess of the base billing demand.

If applicable, the credit for supply, as described in Article 12.3, applies.

Multiplier**2.35**

For a contract at Rate DT, the multiplier is 1 except when there is bulk metering that includes the consumption of the dual-energy system, and when the contract was subject to Rate DT or eligible for Rate DM on May 31, 2009.

When the multiplier is not 1, it is determined as specified in Article 2.27.

Billing demand**2.36**

The billing demand at Rate DT is equal to the maximum power demand during the consumption period in question, but is never less than the minimum billing demand as defined in Article 2.37.

Minimum billing demand (interim provision)**2.37**

The minimum billing demand for any given consumption period is equal to 65% of the maximum power demand during a consumption period that falls wholly within the

winter period included in the 12 consecutive monthly periods ending at the end of the consumption period in question.

For a change to Rate DT from Rate DP, Rate DM or a general rate, the minimum billing demand is determined as specified in this article.

When a customer terminates a weekly contract and signs another for the delivery of electricity at the same location and for similar purposes within the following 12 consecutive monthly periods, these two contracts are considered to be a single contract for calculation of the minimum billing demand.

Base billing demand **2.38**

The base billing demand is the higher of the following values:

- a) 50 kilowatts or
- b) 4 kilowatts times the multiplier.

Apartment building, community residence or rooming house with a dual-energy system **2.39**

For an apartment building, community residence or rooming house, a customer who uses a dual-energy system that meets the conditions in Article 2.31 may opt for Rate DT. If the electricity is exclusively for habitation purposes, Rate DT applies in accordance with the following conditions:

- a) When the electricity for a dwelling is metered separately and the meter records the consumption of a dual-energy system, the contract for such dwelling is subject to Rate DT;
- b) When the electricity for the common areas and collective services is metered separately and the meter records the consumption of the dual-energy system, the contract is subject to Rate DT;
- c) When there is bulk metering and the meter records the consumption of the dual-energy system, the contract is subject to Rate DT;

- d) When there is bulk metering but the dual-energy system is metered separately, such system is subject to a distinct contract at Rate DT.

When the electricity is not exclusively for habitation purposes, Rate DT applies under the provisions of Article 2.40.

Mixed use **2.40**

When the electricity is not exclusively for habitation purposes, Rate DT applies on condition that the installed capacity for purposes other than habitation does not exceed 10 kilowatts.

Where there is bulk metering, where the meter records the consumption of the dual-energy system and where the contract was subject to Rate DT or eligible for Rate DM on May 31, 2009, the multiplier, as defined in Article 2.35, is incremented by 1.

If the installed capacity for purposes other than habitation exceeds 10 kilowatts, the appropriate general rate applies.

In determining the installed capacity for purposes other than habitation, any central water or space heating or air conditioning equipment for both habitation and other purposes is not considered.

Farm **2.41**

When a distribution service loop supplies a farm, or both a farm and a dwelling, Rate DT applies if the following conditions are met:

- a) This distribution service loop must supply at least one dual-energy system;
- b) Each dual-energy system must meet all of the conditions specified in Article 2.31;
- c) The installed capacity of each dual-energy system must be no less than 50% of the installed capacity of the premises it serves;
- d) The installed capacity of all premises supplied by this distribution service loop that are not served by a dual-energy system must not exceed 10 kilowatts.

If the farm does not meet these conditions, it shall be subject to the appropriate domestic rate, if it is eligible for such rate, or to the appropriate general rate.

Duration of rate application **2.42**

Rate DT applies as of the date the appropriate meter is installed. A customer may, at any time, opt for another rate for which the contract is eligible. The new rate comes into effect either at the beginning of the consumption period during which Hydro-Québec receives the customer's written request or at the beginning of the consumption period following the request. It will apply for a minimum of 12 consecutive monthly periods, after which the customer may sign up for another rate for which the contract is eligible by submitting a rate change request.

Non-compliance with conditions **2.43**

If Hydro-Québec is notified by the customer or notes that a dual-energy system no longer meets one of the conditions of application of Rate DT, the contract then becomes subject to the appropriate domestic rate, if it is eligible for such rate, or to the appropriate general rate. Unless the customer corrects the situation within 10 business days, the new rate comes into effect at the beginning of the consumption period during which the non-compliance was reported by the customer or noted by Hydro-Québec. Alternatively, at the customer's discretion, it may take effect at the beginning of one of the 12 previous monthly periods. The new rate will apply for a minimum of 12 consecutive monthly periods, after which the customer may sign up for another rate for which the contract is eligible by submitting a rate change request.

Fraud **2.44**

If the customer commits fraud, manipulates or alters the dual-energy system, hinders its functioning in any way, or uses it for purposes other than those provided for under these *Rates*, Hydro-Québec will terminate the contract at Rate DT. The contract then becomes subject to the appropriate domestic rate, if it is eligible for such rate, or to the appropriate general rate. Rate DT can only apply again to the same contract after a period of 365 days.

SECTION 6

NET METERING FOR CUSTOMER-GENERATORS - OPTION I (INTERIM RATE)

Application 2.45

The Net Metering Option described in this section applies to a Rate D or Rate DM contract where the maximum power demand never exceeded 50 kilowatts during the 12 consecutive monthly periods ending at the end of the consumption period in question.

Definitions 2.46

In this section, the following definitions apply:

customer-generator: A customer who generates electricity at a facility they own and operate to satisfy all or part of their electricity needs.

electricity delivered: The electricity supplied by Hydro-Québec during a consumption period.

electricity injected: The electricity fed into the Hydro-Québec system by the customer-generator during a consumption period.

net consumption: The difference between the volume of electricity delivered and the volume of electricity injected, when the volume of electricity delivered is greater than the volume of electricity injected.

net surplus: The difference between the volume of electricity injected and the volume of electricity delivered, when the volume of electricity injected is greater than the volume of electricity delivered.

surplus bank: A bank in which the net surplus accumulates and from which the net consumption is subtracted.

When net consumption (C_t) for a consumption period is 0:

$$B_t = B_{t-1} + S_t$$

When net consumption (C_t) for a consumption period is greater than 0:

$$B_t = B_{t-1} - C_t$$

where

B_t = the surplus bank for the consumption period;

B_{t-1} = the surplus bank for the preceding consumption period;

C_t = the net consumption for the consumption period;

S_t = the net surplus for the consumption period;

t = the consumption period.

Sign-up procedure

2.47

To sign up for this option, the customer must submit an application to Hydro-Québec in writing by completing the *Net Metering Enrollment Application* form available at www.hydroquebec.com.

Hydro-Québec notifies the customer in writing of its decision to accept or deny their request to connect their self-generation facility to the grid and sign up for this option.

Eligibility

2.48

To be eligible for this option, the customer must meet the following conditions:

- a) The customer's maximum generating capacity must not exceed the lesser of:
 - 50 kilowatts or
 - the estimated maximum power demand for the contract;
- b) The electricity must be generated at a facility that is located at the same delivery point as the contract;
- c) The customer must use one or more of the following types of generation only:
 - wind power,
 - photovoltaic power,
 - hydroelectric power,

- geothermal power for generation of electricity,
- bioenergy (biogas or forest biomass residue).

Sign-up date **2.49**

This option takes effect at the start of the first consumption period following installation of the appropriate metering equipment.

Billing **2.50**

During the entire period in which the Net Metering Option is in effect, the bill for each consumption period is established as follows:

- a) the system access charge for the rate applicable to the contract

plus
- b) the amount billed for the electricity delivered, minus the balance in the surplus bank, based on the prices and conditions for the applicable rate and taking into account, if applicable, the credit for supply applicable to domestic rates as described in Article 12.3.
The amount billed cannot be negative.

Surplus bank restrictions **2.51**

The surplus bank is reset to 0 either:

- a) at the start of the consumption period beginning on or after March 31 following the sign-up date established in accordance with Article 2.49 and on March 31 of all years ending with an even number thereafter;
- b) at the start of the consumption period beginning after a date selected by the customer that falls within the 24 months following the sign-up date established in accordance with Article 2.49 and every 24 months thereafter;
- c) when this option ceases to apply.

When the surplus bank is reset to 0, the customer is credited the balance at the price of the average cost of electricity supply, i.e., 4.600¢ per kilowatt-hour.

The balance in the surplus bank may not be applied to a different contract.

Restrictions**2.52**

Hydro-Québec reserves the right to deny a customer's sign-up request based on system management requirements and the system's capacity to handle the electricity injected.

Moreover, the provisions of the Net Metering Option shall not be interpreted as an obligation on the part of Hydro-Québec to assume additional costs to install equipment or reinforce the transmission or distribution system in order to supply a customer wishing to sign up for this option. Hydro-Québec will not build any new facilities to offer this option, nor allocate existing facilities to guarantee the possibility of injecting electricity into the system. The customer shall assume any and all costs associated with the injection of electricity under the Net Metering Option.

Termination**2.53**

A customer who no longer wishes to benefit from this option must notify Hydro-Québec in writing.

The option ceases to apply at the end of the consumption period in which Hydro-Québec receives the written termination notification from the customer.

The customer is not eligible to sign up for this option again until at least 12 consecutive months after the termination date.

A customer who wishes to sign up once again for this option must submit a new application to Hydro-Québec in accordance with the provisions of Article 2.47.

SECTION 7

ADDITIONAL ELECTRICITY OPTION FOR PHOTOSYNTHETIC LIGHTING OR SPACE HEATING TO RAISE CROPS (INTERIM RATE)

Application 2.54

The Additional Electricity Option, described in Section 4 of Chapter 6, applies to the domestic Rate D, DP or DM contract of a customer who uses electricity for photosynthetic lighting or for space heating to raise crops, where the maximum power demand has been at least 50 kilowatts during a consumption period included in the 12 consecutive monthly periods preceding the date of the sign-up request, subject to the provisions of articles 2.55, 2.56 and 2.57.

It does not apply to a Rate D contract when the customer is signed up for the Winter Credit Option described in Section 8 of this chapter. Customers with a Rate Flex D contract described in Section 9 or a Time-of-Use Rate D contract described in Section 11 of this chapter are also ineligible.

Sign-up procedure 2.55

A customer wishing to sign up for the Additional Electricity Option must submit a request to Hydro-Québec in writing at least 15 business days before the start of the consumption period for which the option is being requested. Subject to installation of the appropriate metering equipment, agreement on the reference power and Hydro-Québec's written approval, the option takes effect at the beginning of the consumption period following the period during which Hydro-Québec receives the written request.

Establishing reference power 2.56

Upon receiving a request for the Additional Electricity Option for Photosynthetic Lighting or Space Heating to Raise Crops, Hydro-Québec may base the reference power on the normal consumption profile, i.e., excluding these two uses.

Conditions of application **2.57**

The conditions defined in Section 4 of Chapter 6 apply, with the following adjustments:

- a) The price of additional electricity set according to Article 6.52 cannot be lower than the average price at Rate M, based only on the second-tier energy price for 25-kV service and a 100% load factor;
- b) Rate L and Rate LG mentioned in articles 6.47, 6.51, 6.54 and 6.55 are replaced by rates D, DP and DM;
- c) The adjustment for the difference in power factor provided for in Article 6.55 is made if the power factor for the actual consumption or the reference power, or for both, is lower than 90%.

SECTION 8

WINTER CREDIT OPTION FOR RATE D CUSTOMERS (INTERIM RATE)

Application **2.58**

The Winter Credit Option described in this section applies to the Rate D contract of a customer who is able to reduce consumption at Hydro-Québec's request during peak hours as defined in Article 2.59.

Definitions **2.59**

In this section, the following definitions apply:

energy curtailed: A value, expressed in kilowatthours, corresponding to the difference between the reference energy and the energy consumption during the peak demand event. This value cannot be negative.

peak demand event: The sequence of peak hours indicated by Hydro-Québec in the peak demand event notification sent to the customer in accordance with Article 2.62.

peak hours: All hours from 06:00 to 10:00 and from 16:00 to 20:00 during the winter period, excluding December 24, 25, 26 and 31, January 1 and 2, as well as Good Friday and Easter Monday when the latter fall within the winter period.

reference energy: A value, expressed in kilowatthours, representing the customer's estimated energy consumption during the peak demand event according to their normal consumption profile. This value is equal to the sum of the averages of the actual values recorded each hour during the relevant time range in the reference period, excluding the minimum and maximum values for each hour, and the temperature adjustment.

reference period: Depending on whether the peak demand event occurs on a weekday or weekend, the period corresponding to the peak hours of the 5 weekdays or 5 weekend days preceding the day of the peak demand event and during which there was no such event.

temperature adjustment: A value, expressed in kilowatthours, that is equal to the difference between:

- the sum of the actual values recorded each hour during the period of 3 consecutive hours beginning 5 hours before the start of a peak demand event that occurs in the morning, and
- the sum of the averages of the actual values recorded each hour during the corresponding time ranges in the reference period, excluding the minimum and maximum values for each hour;

or

- the sum of the actual values recorded each hour during the period of 2 consecutive hours beginning 4 hours before the start of a peak demand event occurring in the evening, and
- the sum of the averages of the actual values recorded each hour during the corresponding time ranges in the reference period, excluding the minimum and maximum values for each hour;

except if the energy curtailed exceeds 40 kWh, in which case the temperature adjustment is limited to:

- 2 times the sum of the averages of the actual values recorded each hour during the periods of 3 consecutive hours beginning 5 hours before all the corresponding time ranges in the reference period if the peak demand event occurs in the morning, excluding the minimum and maximum values for each hour;

or

- 2 times the sum of the averages of the actual values recorded each hour during the periods of 2 consecutive hours beginning 4 hours before the start of all the corresponding time ranges in the reference period if the peak demand event occurs in the evening, excluding the minimum and maximum values for each hour.

This value is prorated according to the number of hours included in the peak demand event.

Sign-up procedure

2.60

To sign up for this option, the customer must submit a request either through the Customer Space at www.hydroquebec.com or by contacting Hydro-Québec's customer services.

Hydro-Québec notifies the customer in writing of its decision to accept or deny the request within 5 business days of receiving it. If the request is accepted, the option applies as of the day following Hydro-Québec's acceptance.

Hydro-Québec reserves the right to deny a customer's sign-up request or terminate a customer's enrollment in this option if it encounters recurring problems in gathering hourly metering data.

Eligibility

2.61

To be eligible for this option, the customer must meet the following conditions:

- a) Metering at each delivery point must be done by a single communicating meter installed by Hydro-Québec;
- b) The customer must have created a Customer Space at www.hydroquebec.com and, for as long as this option applies, this Space must include a valid email address to which the peak demand event notifications will be sent;
- c) The customer's contract must have a consumption history of at least 1 monthly period;

- d) The electrical installation must not be supplied by an off-grid system;
- e) The customer must not be signed up for a Net Metering Option. However, this condition will cease to apply on March 31, 2026.

Conditions applicable to peak demand events 2.62

Peak events may occur at any time during peak hours. They must meet the following conditions:

Maximum number of events per day:	2
Minimum interval between 2 events (hours):	6
Duration of each event (hours):	4
Maximum duration of events per winter period (hours):	120

Peak demand event notifications 2.63

As of the time the option applies, Hydro-Québec will send a peak demand event notification by email, push notification or both, or via any other method agreed upon with the customer, before 15:00 on the day prior to each peak demand event. The notifications shall include the event's start and end times.

Delivery times for notifications may vary depending on the transmission process used by the customer's telecommunications provider.

If a peak demand event occurs the day after Hydro-Québec's acceptance, the notification may be sent after 15:00.

Hydro-Québec will also post all peak demand event notifications on its website at www.hydroquebec.com.

Hydro-Québec cannot be held responsible for non-receipt of a notification due to the failure of systems or equipment belonging to the customer or their telecommunications provider.

Credit **2.64**

For each consumption period during which one or more peak demand events occur, the customer is entitled to the following credit:

56.786¢ per kilowatthour of energy curtailed.

No credit is given for a peak demand event if the value of the energy curtailed is less than 1.000¢.

Termination **2.65**

A customer who no longer wishes to benefit from this option must notify Hydro-Québec in writing through the Customer Space at www.hydroquebec.com or by calling customer services.

The option will cease to apply the day after Hydro-Québec is notified.

SECTION 9

RATE FLEX D (INTERIM RATE)

Application **2.66**

Rate Flex D applies to the Rate D-eligible contract of a customer who is able to reduce consumption, at Hydro-Québec's request, during peak hours as defined in Article 2.67.

Definitions **2.67**

In this section, the following definitions apply:

peak demand event: The sequence of peak hours indicated by Hydro-Québec in the peak demand event notification sent to the customer in accordance with Article 2.71.

peak hours: All hours from 06:00 to 09:00 and from 16:00 to 20:00 during the winter period, excluding December 24, 25, 26 and 31, January 1 and 2, as well as Good Friday and Easter Monday when the latter fall within the winter period.

Sign-up procedure**2.68**

To sign up for this rate, the customer must submit a request through the Customer Space at www.hydroquebec.com, through the site www.hiloenergie.com, or by contacting Hydro-Québec's customer services.

Hydro-Québec notifies the customer in writing of its decision to accept or deny the request within 5 business days of receiving it. The rate applies as of the day following Hydro-Québec's acceptance.

Hydro-Québec reserves the right to deny the customer's sign-up request or terminate their Rate Flex D contract if it encounters recurring problems in gathering hourly metering data.

Eligibility**2.69**

For the contract to be eligible for this rate, the following conditions must be met:

- a) Metering at each delivery point must be done by a single communicating meter installed by Hydro-Québec;
- b) The customer must have created a Customer Space at www.hydroquebec.com and, for as long as this rate applies, this Space must include a valid email address to which the peak demand event notifications will be sent;
- c) Barring any exceptions determined by Hydro-Québec, the customer who terminates their contract at this rate without having prevailed themselves of it for a complete winter period cannot sign up again during that same winter or the following winter period;
- d) The electrical installation must not be supplied by an off-grid system;
- e) The customer must not be signed up for the Winter Credit Option described in Section 8 of this chapter;
- f) The customer must not be signed up for a Net Metering Option. However, this condition will cease to apply on March 31, 2026.

Conditions applicable to peak demand events **2.70**

Peak events may occur at any time during peak hours. They must meet the following conditions:

Maximum number of events per day: 2

Minimum interval between 2 events (hours): 6

Duration of each event (hours): 4

Maximum duration of events per winter period (hours): 120

Peak demand event notifications **2.71**

As of the time Rate Flex D applies, Hydro-Québec will send a peak demand event notification by email, push notification or both, or via any other method agreed upon with the customer, before 15:00 on the day prior to each peak demand event. The notifications shall include the event's start and end times.

Delivery times for notifications may vary depending on the transmission process used by the customer's telecommunications provider.

If a peak demand event occurs the day after Hydro-Québec's acceptance, the notification may be sent after 15:00.

Hydro-Québec will also post all peak demand event notifications on its website at www.hydroquebec.com.

Hydro-Québec cannot be held responsible for non-receipt of a notification due to the failure of systems or equipment belonging to the customer or the customer's telecommunications provider.

Structure of Rate Flex D **2.72**

The structure of Rate Flex D for a weekly contract is as follows:

46.154¢ system access charge for each day in the consumption period

plus

a) During the winter period:

- 4.774¢ per kilowatthour for energy consumed outside peak demand events, up to the product of 40 kilowatthours and the number of days in the consumption period, and
- 8.699¢ per kilowatthour for the remaining energy consumed outside peak demand events, and
- 45.088¢ per kilowatthour for energy consumed during peak demand events;

or

b) During the summer period:

- 6.905¢ per kilowatthour for energy consumed, up to the product of 40 kilowatthours and the number of days in the consumption period, and
- 10.652¢ per kilowatthour for the remaining consumption.

If applicable, the credit for supply, as described in Article 12.3, applies.

Termination

2.73

The customer may terminate the Rate Flex D contract at any time by calling Hydro-Québec's customer services.

The contract will then become subject to Rate D, if it is still eligible, or to any other rate for which it is eligible, the day after Hydro-Québec is notified of the termination.

If the rate change occurs partway through a consumption period, the period will be split into two sub-periods for billing purposes. Consumption will then be billed at Rate Flex D based on Hydro-Québec's meter reading on the day it receives the customer's termination notice and at the new rate based on the reading taken at the end of the consumption period.

SECTION 10

DEMAND RESPONSE - LEEWAY OPTION (INTERIM RATE)

Application 2.74

Until March 31, 2026, the Demand Response Option, described in Section 9 of Chapter 6, applies to the Rate DM or DP contract of a customer capable of reducing their power demand during the winter period at Hydro-Québec's request.

As of April 1, 2026, the Demand Response – Leeway Option (DR Leeway Option), described in Section 3 of Chapter 6, will apply to the Rate DM or DP contract of a customer capable of reducing their power demand during the winter period at Hydro-Québec's request.

Termination 2.75

A customer who no longer wishes to benefit from this option must notify Hydro-Québec by calling customer services.

The option ceases to apply the day after Hydro-Québec is notified by the customer, and no credit is granted.

This article does not, however, apply if the customer terminates the service contract during the winter period.

SECTION 11

TIME-OF-USE RATE D (INTERIM RATE)

Application 2.76

Time-of-Use Rate D applies to the Rate D-eligible contract of a customer who is able to reduce consumption during the on-peak hours defined in Article 2.77.

Customers will be able to sign up for this rate as of December 1, 2026.

Definitions **2.77**

In this section, the following definitions apply:

off-peak hours: All hours that are not on-peak or overnight hours.

on-peak hours: All hours from 06:00 to 10:00 and from 16:00 to 20:00 during the winter period, and from 16:00 to 20:00 during the summer period, excluding:

- a) Saturdays and Sundays;
- b) December 24, 25, 26 and 31, January 1 and 2, Good Friday, Easter Monday, Journée nationale des patriotes, June 24, July 1, Labour Day and Thanksgiving.

overnight hours: All hours between 23:00 and 6:00 from Monday to Sunday.

Sign-up procedure **2.78**

To sign up for this rate, the customer must submit a request through the Customer Space at www.hydroquebec.com, or contact Hydro-Québec's customer services.

Hydro-Québec notifies the customer in writing of its decision to accept or deny the request within 5 business days of receiving it. The option applies as of the day following Hydro-Québec's acceptance.

Hydro-Québec reserves the right to deny the customer's sign-up request or terminate their Time-of-Use Rate D contract if it encounters recurring problems with gathering hourly metering data.

Eligibility **2.79**

For the contract to be eligible for this rate, the following conditions must be met:

- a) Metering must be done by a communicating meter installed by Hydro-Québec;
- b) The customer must not have terminated a Time-of-Use Rate D contract during the previous winter period;
- c) The electrical installation must not be supplied by an off-grid system;

- d) The customer must not be signed up for the Winter Credit Option described in Section 8 of this chapter;
- e) The customer must not be signed up for a Net Metering Option. However, this condition will cease to apply on March 31, 2026.

Structure of Time-of-Use Rate D 2.80

The structure of Time-of-Use Rate D for a weekly contract is as follows:

46.154¢ system access charge for each day in the consumption period

plus, in the winter period,

a) During on-peak hours:

10.272¢ per kilowatthour for energy consumed, up to the product of 10 kilowatthours and the number of days in the consumption period, and

21.964¢ per kilowatthour for the remaining consumption;

b) During off-peak hours:

5.737¢ per kilowatthour for energy consumed, up to the product of 20 kilowatthours and the number of days in the consumption period, and

8.851¢ per kilowatthour for the remaining consumption;

c) During overnight hours:

4.972¢ per kilowatthour for energy consumed, up to the product of 10 kilowatthours and the number of days in the consumption period, and

4.972¢ per kilowatthour for the remaining consumption;

or, in the summer period,

a) During on-peak hours:

8.742¢ per kilowatthour for energy consumed, up to the product of 5 kilowatthours and the number of days in the consumption period, and

18.576¢ per kilowatthour for the remaining consumption;

b) During off-peak hours:

6.905¢ per kilowatthour for energy consumed, up to the product of 20 kilowatthours and the number of days in the consumption period, and

10.652¢ per kilowatthour for the remaining consumption;

c) During overnight hours:

4.972¢ per kilowatthour for energy consumed, up to the product of 15 kilowatthours and the number of days in the consumption period, and

4.972¢ per kilowatthour for the remaining consumption.

Limitation

2.81

Hydro-Québec reserves the right to terminate the customer's Time-of-Use Rate D contract if it encounters recurring problems in gathering hourly metering data.

Termination

2.82

A customer may terminate their Time-of-Use Rate D contract at any time by notifying Hydro-Québec in writing through the Customer Space or by calling customer services.

The contract will then become subject to Rate D, if it is still eligible, or to any other rate for which it is eligible, the day after Hydro-Québec is notified of the termination.

If the rate change occurs partway through a consumption period, the period will be split into two sub-periods for billing purposes. Consumption will then be billed at Time-of-Use Rate D based on Hydro-Québec's meter reading on the day it receives the customer's termination notice and at the new rate based on the reading taken at the end of the consumption period.

CHAPTER 3

RATES FOR SMALL POWER

SECTION 1

RATE G

Application **3.1**

General Rate G applies to a small-power contract with a minimum billing demand of less than 65 kilowatts.

Rate G does not apply to electricity delivered for the purpose of supplying a direct-current electric vehicle charging station rated 400 volts or more.

Structure of Rate G **3.2**

The structure of monthly Rate G for an annual contract is as follows:

\$14.860 system access charge

plus

\$21.261 per kilowatt of billing demand in excess of 50 kilowatts

plus

11.933¢ per kilowatthour for the first 15,090 kilowatthours, and

9.184¢ per kilowatthour for the remaining consumption.

The minimum monthly bill is \$14.860 when single-phase electricity is delivered or \$44.581 when three-phase electricity is delivered.

If applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4, apply.

Billing demand **3.3**

The billing demand at Rate G is equal to the maximum power demand during the consumption period in question, but is never less than the minimum billing demand as defined in Article 3.4.

Minimum billing demand **3.4**

The minimum billing demand for any given consumption period is equal to 65% of the maximum power demand during a consumption period that falls wholly within the winter period included in the 12 consecutive monthly periods ending at the end of the given consumption period.

When the minimum billing demand reaches or exceeds 65 kilowatts, the contract ceases to be eligible for Rate G. It then becomes subject to Rate M or, if the average load factor for the last 12 consumption periods is less than 26%, to Rate G9.

Rate M or Rate G9 applies from the start of the consumption period during which the minimum billing demand reaches or exceeds 65 kilowatts.

When a customer terminates an annual contract and signs another for the delivery of electricity at the same location and for similar purposes within the following 12 consecutive monthly periods, these two contracts are considered to be a single contract for calculation of the minimum billing demand.

For a change to Rate G from Rate G9, Rate M or a domestic rate, the minimum billing demand is determined as specified in the first paragraph of this article.

Short-term contract **3.5**

A short-term contract for general use of small power, where the electricity delivered is metered and the contract has a term of at least 1 monthly period, is eligible for Rate G, but the system access charge and minimum monthly bill are increased by \$14.860.

In the winter period, the monthly demand charge is increased by \$7.266.

When a consumption period to which the increased monthly demand charge applies overlaps with the beginning or the end of the winter period, this increase is prorated to the number of days in the consumption period that fall within the winter period.

When a customer terminates a short-term contract and signs another for the delivery of electricity at the same location and for similar purposes within the following 12 consecutive monthly periods, these two contracts are considered to be a single contract for calculation of the minimum billing demand.

Installation of maximum-demand meter 3.6

In the case of a contract at Rate G, Hydro-Québec installs a maximum-demand meter when the electrical installation is such that the maximum power demand is likely to exceed 50 kilowatts.

**Provisions related to the elimination of energy price
degressivity under Rate G 3.7**

Each year, further to the increase in the second-tier energy price that comes into effect on April 1 and is designed to eliminate Rate G's energy price degressivity, Hydro-Québec will determine if it would be more advantageous for the customer to change to another rate. Hydro-Québec will automatically replace Rate G by Rate M or Rate G9 as of the consumption period beginning on or after April 1 of the current year if, for the 12 consecutive monthly periods immediately preceding this period, applying the most advantageous rate would have yielded savings of at least 3% on the customer's electricity bill in comparison to the amount payable under Rate G, based on the new prices in effect.

If a customer whose rate has been modified requests to see the details of the optimization analysis, Hydro-Québec shall provide this information before the end of the consumption period following the period when the request was received.

A customer whose rate is changed by Hydro-Québec under this article may, once only, choose another rate for which the contract is eligible. The rate change request must be sent to Hydro-Québec before the end of the 3rd monthly period after the rate was changed by Hydro-Québec. The change takes effect at the beginning of the period during which the rate was changed by Hydro-Québec.

SECTION 2

NET METERING FOR CUSTOMER-GENERATORS - OPTION I (INTERIM RATE)

Application 3.8

Net Metering Option I, described in Section 6 of Chapter 2, applies to a Rate G contract where the maximum power demand never exceeded 50 kilowatts during the 12 consecutive monthly periods ending at the end of the consumption period in question.

SECTION 3

WINTER CREDIT OPTION FOR RATE G CUSTOMERS (INTERIM RATE)

Application 3.9

The Winter Credit Option described in this section applies to the Rate G contract of a customer who is able to reduce consumption at Hydro-Québec's request during peak hours as defined in Article 3.10, where the maximum power demand under the contract is less than 50 kilowatts.

Definitions 3.10

In this section, the following definitions apply:

energy curtailed: A value, expressed in kilowatthours, corresponding to the difference between the reference energy and the energy consumption during the peak demand event. This value cannot be negative.

peak demand event: The sequence of peak hours indicated by Hydro-Québec in the peak demand event notification sent to the customer in accordance with Article 3.14.

peak hours: All hours from 06:00 to 10:00 and from 16:00 to 20:00 during the winter period, excluding December 24, 25, 26 and 31, January 1 and 2, as well as Good Friday and Easter Monday when the latter fall within the winter period.

reference energy: A value, expressed in kilowatthours, representing the customer's estimated energy

consumption during the peak demand event according to their normal consumption profile. This value is equal to the sum of the averages of the actual values recorded each hour during the relevant time range in the reference period, excluding the minimum and maximum values for each hour, and the temperature adjustment.

reference period: Depending on whether the peak demand event occurs on a weekday or weekend, the period corresponding to the peak hours of the 5 weekdays or 5 weekend days preceding the day of the peak demand event and during which there was no such event.

temperature adjustment: A value, expressed in kilowatthours, that is equal to the difference between:

- the sum of the actual values recorded each hour during the period of 3 consecutive hours beginning 5 hours before the start of a peak demand event occurring in the morning, and
- the sum of the averages of the actual values recorded each hour during the corresponding time ranges in the reference period, excluding the minimum and maximum values for each hour;

or

- the sum of the actual values recorded each hour during the period of 2 consecutive hours beginning 4 hours before the start of a peak demand event occurring in the evening, and
- the sum of the averages of the actual values recorded each hour during the corresponding time ranges in the reference period, excluding the minimum and maximum values for each hour;

except if the energy curtailed exceeds 40 kWh, in which case the temperature adjustment is limited to:

- 2 times the sum of the averages of the actual values recorded each hour during the periods of 3 consecutive hours beginning 5 hours before all the corresponding time ranges in the reference period if the peak demand event occurs in the morning, excluding the minimum and maximum values for each hour,

or

- 2 times the sum of the averages of the actual values recorded each hour during the periods of 2 consecutive hours beginning 4 hours before the start of all the corresponding time ranges in the reference period if the peak demand event occurs in the evening, excluding the minimum and maximum values for each hour.

This value is prorated according to the number of hours included in the peak demand event.

Sign-up procedure

3.11

To sign up for this option, the customer must submit a request through the Customer Space or contact Hydro-Québec's customer services.

Hydro-Québec notifies the customer in writing of its decision to accept or deny the request within 5 business days of receiving it. If the request is accepted, the option applies as of the day following Hydro-Québec's acceptance.

Hydro-Québec reserves the right to deny a customer's sign-up request or terminate a customer's enrollment in this option if it encounters recurring problems in gathering hourly metering data.

Eligibility

3.12

To be eligible for this option, the customer must meet the following conditions:

- a) Metering at each delivery point must be done by a single communicating meter installed by Hydro-Québec;
- b) The customer must have created a Customer Space at www.hydroquebec.com and, for as long as this option applies, this Space must include a valid email address to which the peak demand event notifications will be sent;
- c) The contract must have a consumption history of at least 1 monthly period;

- d) The electrical installation must not be supplied by an off-grid system;
- e) The customer must not be signed up for any of the rate options described in Chapter 6;
- f) The customer must not be signed up for a Net Metering Option. However, this condition will cease to apply on March 31, 2026.

Conditions applicable to peak demand events 3.13

Peak demand events may occur at any time during peak hours. They must meet the following conditions:

Maximum number of events per day:	2
Minimum interval between 2 events (hours):	6
Duration of each event (hours):	4
Maximum duration of events per winter period (hours):	120

Peak demand event notifications 3.14

As of the time the option applies, Hydro-Québec will send a peak demand event notification by email or by any other means agreed upon with the customer, before 15:00 on the day prior to each peak demand event, indicating the event start and end times.

Delivery times for notifications may vary depending on the transmission process used by the customer's telecommunications provider.

If a peak demand event occurs the day after Hydro-Québec's acceptance, the notification may be sent after 15:00.

Hydro-Québec will also post all peak demand event notifications on its website at www.hydroquebec.com.

Hydro-Québec cannot be held responsible for non-receipt of a notification due to the failure of systems or equipment belonging to the customer or the customer's telecommunications provider.

Credit **3.15**

For each consumption period during which one or more peak demand events occur, the customer is entitled to the following credit:

60.262¢ per kilowatthour of energy curtailed.

No credit is given for a peak demand event if the value of the energy curtailed is less than 1.00¢.

Termination **3.16**

A customer who no longer wishes to benefit from this option must notify Hydro-Québec in writing through the Customer Space at www.hydroquebec.com or by calling customer services.

The option will cease to apply the day after Hydro-Québec is notified.

SECTION 4

RATE FLEX G (INTERIM RATE)

Application **3.17**

Rate Flex G applies to the Rate G-eligible contract of a customer who is able to reduce consumption, at Hydro-Québec's request, during peak hours as defined in Article 3.18, where the maximum power demand for the contract is less than 50 kilowatts.

Definitions **3.18**

In this section, the following definitions apply:

peak demand event: The sequence of peak hours indicated by Hydro-Québec in the peak demand event notification sent to the customer in accordance with Article 3.22.

peak hours: All hours from 06:00 to 10:00 and from 16:00 to 20:00 during the winter period, excluding December 24, 25, 26 and 31, January 1 and 2, as well as Good Friday and Easter Monday when the latter fall within the winter period.

Sign-up procedure

3.19

To sign up for this rate, the customer must submit a request through the Customer Space at www.hydroquebec.com or by contacting Hydro-Québec's customer services.

Hydro-Québec notifies the customer in writing of its decision to accept or deny the request within 5 business days of receiving it. The rate applies as of the day following Hydro-Québec's acceptance.

Hydro-Québec reserves the right to deny a customer's sign-up request or terminate their Rate Flex G contract if it encounters recurring problems in gathering hourly metering data.

Eligibility

3.20

For the contract to be eligible for this rate, the following conditions must be met:

- a) Metering at each delivery point must be done by a single communicating meter installed by Hydro-Québec;
- b) The customer must have created a Customer Space at www.hydroquebec.com and, for as long as this rate applies, this Space must include a valid email address to which the peak demand event notifications will be sent;
- c) Barring any exceptions determined by Hydro-Québec, the customer who terminates their contract at this rate without having prevailed themselves of it for a complete winter period cannot sign up again during that same winter or the following winter period;
- d) The electrical installation must not be supplied by an off-grid system;
- e) The customer must not be signed up for the Winter Credit Option described in Section 3 of this chapter nor for any of the rate options described in Chapter 6;
- f) The customer must not be signed up for a Net Metering Option. However, this condition will cease to apply on March 31, 2026.

Conditions applicable to peak demand events **3.21**

Peak demand events may occur at any time during peak hours. They must meet the following conditions:

Maximum number of events per day: 2

Minimum interval between 2 events (hours): 6

Duration of each event (hours): 4

Maximum duration of events per winter period (hours): 120

Peak demand event notifications **3.22**

As of the time Rate Flex G applies, Hydro-Québec will send a peak demand event notification by email, push notification or both, or via any other method agreed upon with the customer, before 15:00 on the day prior to each peak demand event. The notifications shall include the event's start and end times.

Delivery times for notifications may vary depending on the transmission process used by the customer's telecommunications provider.

If a peak demand event occurs the day after Hydro-Québec's acceptance, the notification may be sent after 15:00.

Hydro-Québec will also post all peak demand event notifications on its website at www.hydroquebec.com.

Hydro-Québec cannot be held responsible for non-receipt of a notification due to the failure of systems or equipment belonging to the customer or the customer's telecommunications provider.

Structure of Rate Flex G **3.23**

The structure of monthly Rate Flex G for an annual contract is as follows:

\$14.860 system access charge

plus

a) During the winter period:

9.800¢ per kilowatthour for energy consumed outside peak demand events, and

54.442¢ per kilowatthour for energy consumed during peak demand events;

or

b) During the summer period:

11.933¢ per kilowatthour.

The minimum monthly bill is \$14.860 when single-phase electricity is delivered or \$44.581 when three-phase electricity is delivered.

Termination

3.24

The customer may terminate the Rate Flex G contract at any time by calling Hydro-Québec's customer services.

The contract will then become subject to Rate G, if it is still eligible, or to any other rate for which it is eligible, the day after Hydro-Québec is notified of the termination.

If the rate change occurs partway through a consumption period, the period will be split into two sub-periods for billing purposes. Consumption will then be billed at Rate Flex G based on Hydro-Québec's meter reading on the day it receives the customer's termination notice and at the new rate based on the reading taken at the end of the consumption period.

Installation of maximum-demand meter

3.25

In the case of a contract at Rate Flex G, Hydro-Québec installs a maximum-demand meter when the electrical installation is such that the maximum power demand is likely to exceed 50 kilowatts.

CHAPTER 4

RATES FOR MEDIUM POWER

SECTION 1

RATE M

Application **4.1**

General Rate M applies to a medium-power contract with a maximum power demand of at least 50 kilowatts during one of the 12 consecutive monthly periods ending at the end of the consumption period in question.

Structure of Rate M **4.2**

The structure of monthly Rate M for an annual contract is as follows:

\$17.573 per kilowatt of billing demand

plus

6.061¢ per kilowatthour for the first
210,000 kilowatthours, and

4.495¢ per kilowatthour for the remaining
consumption.

The minimum monthly bill is \$14.860 when single-phase electricity is delivered or \$44.581 when three-phase electricity is delivered.

If applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4, apply.

Billing demand **4.3**

The billing demand at Rate M is equal to the maximum power demand during the consumption period in question, but is never less than the minimum billing demand as defined in Article 4.4.

Minimum billing demand**4.4**

The minimum billing demand for any given consumption period is equal to 65% of the maximum power demand during a consumption period that falls wholly within the winter period included in the 12 consecutive monthly periods ending at the end of the given consumption period.

When the minimum billing demand reaches or exceeds 5,000 kilowatts or more, the contract ceases to be eligible for Rate M. It then becomes subject to Rate L, if it is eligible for such rate, or to Rate LG.

Rate L or Rate LG applies as of the beginning of the consumption period during which the minimum billing demand reached or exceeded 5,000 kilowatts.

When a customer terminates an annual contract and signs another for the delivery of electricity at the same location and for similar purposes within the following 12 consecutive monthly periods, these two contracts are considered to be a single contract for calculation of the minimum billing demand.

For a change to Rate M from Rate G, Rate G9, Rate LG or a domestic rate, the minimum billing demand is determined as specified in this article.

Change to Rate L during the term of the contract**4.5**

A customer with a Rate M contract may, if the contract is eligible, opt for Rate L at any time by submitting a rate change request to Hydro-Québec in writing. The rate change takes effect either at the beginning of the consumption period during which Hydro-Québec receives the written request, at any date and time during that consumption period or at the beginning of the previous consumption period, at the customer's discretion.

In the event the customer does not specify the date and time at which the rate change is to take effect, Rate L takes effect at the beginning of the consumption period during which Hydro-Québec receives the written request.

The contract must be subject to Rate M for a minimum of 30 days before Rate L can take effect.

Change to Rate L early in contract**4.6**

For the first 12 monthly periods of the contract, the customer may once retroactively change the minimum billing demand to 5,000 kilowatts or more, provided that the following conditions are met:

- a) The customer's current contract is an annual one eligible for Rate L;
- b) It is the customer's first annual contract at that location;
- c) The installation supplied under this contract is:
 - a new installation, or
 - an installation which, under the current contract, is used for purposes other than those of the previous contract, or whose functioning has been significantly modified.

The revised minimum billing demand and Rate L come into effect either at the beginning of the contract or at the beginning of a consumption period, at the customer's discretion.

To obtain this revision, the customer must submit a written request to Hydro-Québec in writing before the end of the 14th monthly period following the date of the beginning of the contract.

Short-term contract**4.7**

A short-term contract for general use of medium power, where the electricity delivered is metered and the contract has a duration of at least 1 monthly period, is eligible for Rate M, but the minimum monthly bill is increased by \$14.860.

In the winter period, the monthly demand charge is increased by \$7.266.

When a consumption period to which the increased demand charge applies overlaps with the beginning or the end of the winter period, this increase is prorated according to the number of days in the consumption period that fall within the winter period.

When a customer terminates a short-term contract and signs another for the delivery of electricity at the same

location and for similar purposes within the following 12 consecutive monthly periods, these two contracts are considered to be a single contract for calculation of the minimum billing demand.

Installation of maximum-demand meter 4.8

Hydro-Québec installs a maximum-demand meter for all Rate M contracts in order to measure the maximum power demand.

SECTION 2

RATE G9

Application 4.9

General Rate G9 applies to a contract which is characterized by limited use of billing demand and where the maximum power demand has been at least 65 kilowatts during one of the 12 consecutive monthly periods ending at the end of the consumption period in question.

Rate G9 is not offered to independent producers.

Structure of Rate G9 4.10

The structure of monthly Rate G9 for an annual contract is as follows:

\$5.098 per kilowatt of billing demand

plus

12.148¢ per kilowatthour.

The minimum monthly bill is \$14.860 when single-phase electricity is delivered or \$44.581 when three-phase electricity is delivered.

If the maximum power demand exceeds the real power during a consumption period, the excess is subject to a monthly charge of \$12.475 per kilowatt.

If applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4, apply.

Billing demand**4.11**

The billing demand at Rate G9 is equal to the maximum power demand during the consumption period in question, but is never less than the minimum billing demand as defined in Article 4.12.

Minimum billing demand**4.12**

The minimum billing demand for any consumption period is equal to 75% of the maximum power demand during a consumption period that falls wholly within the winter period included in the 12 consecutive monthly periods ending at the end of the consumption period in question.

When a customer terminates an annual contract and signs another for the delivery of electricity at the same location and for similar purposes within the following 12 consecutive monthly periods, these two contracts are considered to be a single contract for calculation of the minimum billing demand.

For a change to Rate G9 from Rate G, Rate M or Rate LG, or from a domestic rate, the minimum billing demand is determined as specified in this article.

Short-term contract**4.13**

A short-term contract for general use of medium power, where the electricity delivered is metered and the contract has a duration of at least 1 monthly period, is eligible for Rate G9, but the minimum monthly bill is increased by \$14.860.

In the winter period, the monthly demand charge is increased by \$7.266.

When a consumption period to which the increased demand charge applies overlaps with the beginning or the end of the winter period, this increase is prorated to the number of days in the consumption period that fall within the winter period.

When a customer terminates a short-term contract and signs another for the delivery of electricity at the same location and for similar purposes within the following 12 consecutive monthly periods, these two contracts are considered to be a single contract for calculation of the minimum billing demand.

Installation of maximum-demand meter 4.14

Hydro-Québec installs a maximum-demand meter for all Rate G9 contracts in order to measure the maximum power demand.

SECTION 3

RATE GD

Application 4.15

Rate GD applies to the annual medium-power contract of an independent producer whose usual energy source is temporarily unavailable or is under maintenance. The electricity is then delivered as a backup energy source.

Rate GD does not apply if backup generators are the only equipment used by the customer to produce electricity.

Rate GD may not be used for the resale of energy to a third party.

Beginning of application of Rate GD 4.16

Rate GD applies as of the date on which the appropriate metering equipment is installed. All the electricity supplied under this rate must be covered by a separate contract.

Structure of Rate GD 4.17

The structure of monthly Rate GD for an annual contract is as follows:

\$6.390 per kilowatt of billing demand

plus

7.530¢ per kilowatthour for energy consumed in the summer period, or

18.655¢ per kilowatthour for energy consumed in the winter period.

The minimum monthly bill is \$14.860 when single-phase electricity is delivered or \$44.581 when three-phase electricity is delivered.

If applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4, apply.

Billing demand **4.18**

The billing demand at Rate GD is equal to the highest real power demand (in kilowatts) during the consumption period in question, but is never less than the minimum billing demand as defined in Article 4.19.

Minimum billing demand **4.19**

The minimum billing demand for a contract at Rate GD is the highest real power demand during the 24 consecutive monthly periods ending at the end of the consumption period in question.

When a customer terminates an annual contract and signs another for the delivery of electricity at the same location and for similar purposes within the following 12 consecutive monthly periods, these two contracts are considered to be a single contract for calculation of the minimum billing demand.

For a change to Rate GD from Rate G or Rate M, the minimum billing demand cannot be less than that established according to the conditions governing the original rate, for at least 12 consecutive monthly periods starting from the one during which the minimum billing demand was established.

For a change to Rate G or Rate M from Rate GD, the minimum billing demand for the first 12 consumption periods at the new rate cannot be less than the minimum billing demand for the applicable general rate, nor can it be less than 100% of the maximum power demand for the last 12 consumption periods at Rate GD.

SECTION 4

INDUSTRIAL REVITALIZATION RATE FOR MEDIUM-POWER CUSTOMERS

Application **4.20**

The Industrial Revitalization Rate, described in Section 6 of Chapter 6, applies to the Rate M contract principally

related to an industrial activity of a customer who was eligible for it on March 6, 2025, and who undertakes, as a result of the present rate, to return all or part of a plant's unused production capacity to operation or to convert one or more industrial processes to electricity. The maximum power demand must have been at least 500 kilowatts during a consumption period included in the 12 consecutive monthly periods preceding the sign-up application.

This rate does not apply when the customer is benefiting from the options, rate or conditions described in sections 2, 4, 5, 7 and 8 of Chapter 6 (Demand Response – Commitment Option, Additional Electricity Option, Economic Development Rate, running in or testing of equipment).

Conditions of application **4.21**

The conditions described in Section 6 of Chapter 6 apply, with the following adjustments:

- a) The load increase provided for in subparagraph b) of Article 6.76 must be at least 250 kilowatts;
- b) The Industrial Revitalization Rate price established in Article 6.80 may not be less than the second-tier energy price under Rate M, i.e., 4.495¢ per kilowatthour;
- c) Rate L mentioned in articles 6.82, 6.83 and 6.85 is replaced by Rate M;
- d) The power factor adjustment provided for in Article 6.83 is applied if the power factor for the actual or reference consumption, or both, is less than 90%.

SECTION 5

RATE BR

Application **4.22**

Rate BR applies to a contract for electricity delivered for the purpose of supplying one or more direct-current electric vehicle charging stations rated 400 volts or more. The electricity may also be used to supply one or more 240-volt stations, at the customer's discretion.

Definition **4.23**

In this section, the following definition applies:

load factor: The ratio, expressed as a percentage, of energy consumption to the product of maximum power demand and the number of hours in the consumption period.

Structure of Rate BR **4.24**

The structure of monthly Rate BR for an annual contract is as follows:

- 12.700¢ per kilowatthour for consumption associated with the first 50 kilowatts of maximum power demand, i.e., the product of the maximum power demand up to 50 kilowatts, the load factor and the number of hours in the consumption period,

plus
- 25.574¢ per kilowatthour for consumption associated with the maximum power demand in excess of 50 kilowatts, i.e., the product of the excess power demand, the load factor up to 6%, and the number of hours in the consumption period,

plus
- 16.837¢ per kilowatthour for the remaining consumption.

The minimum monthly bill is \$14.860 when single-phase electricity is delivered or \$44.581 when three-phase electricity is delivered.

Terms and conditions of application **4.25**

If several direct-current charging stations rated 400 volts or more and belonging to the same customer are installed at the same site, they must come under a single contract.

The customer must undertake to supply Hydro-Québec with non-identifiable data from all charging stations covered by the contract under this rate, such as duration, energy consumption and power demand for each charge, at an agreed-upon frequency. If the customer

fails to comply with this undertaking, the contract ceases to be eligible for Rate BR and becomes subject to the appropriate general rate.

Subject to all applicable legislation, Hydro-Québec undertakes to keep confidential all information provided by the customer for the purposes of this rate and identified as confidential by the customer.

Mixed use **4.26**

When the electricity is not used exclusively for the purpose of supplying electric vehicle charging stations, this rate applies on condition that the installed capacity for other purposes does not exceed 10 kilowatts. If the installed capacity for other purposes exceeds 10 kilowatts, the appropriate general rate applies.

Installation of maximum-demand meter **4.27**

Hydro-Québec installs a maximum-demand meter for all Rate BR contracts in order to measure the maximum power demand.

SECTION 6

NET METERING FOR CUSTOMER-GENERATORS – OPTION I (INTERIM RATE)

Application **4.28**

To come.

SECTION 7

RATE FLEX M (INTERIM RATE)

Application **4.29**

Rate Flex M is an experimental peak rate that applies to a medium-power contract.

This rate does not apply when the customer is benefiting from the Industrial Revitalization Rate described in Section 4 of this chapter, or from the options, rate or conditions described in sections 2, 4, 5, 7 and 8 of Chapter 6 (Demand Response – Commitment Option,

Additional Electricity Option, Economic Development Rate, running in or testing of equipment).

Definitions 4.30

In this section, the following definitions apply:

peak demand event: The sequence of peak hours indicated by Hydro-Québec in the peak demand event notification sent to the customer in accordance with Article 4.34.

peak hours: All hours from 06:00 to 09:00 and from 16:00 to 20:00 during the winter period, excluding:

- a) Saturdays and Sundays;
- b) December 24, 25, 26 and 31, January 1 and 2, as well as Good Friday and Easter Monday when the latter fall within the winter period.

Sign-up procedure 4.31

To sign up for this rate, the customer must submit a request through the Customer Space or contact Hydro-Québec's customer services by November 20, 2025.

Hydro-Québec then has 5 business days to analyze the request. Subject to Hydro-Québec's written approval, the rate will apply no later than December 1, 2025.

Eligibility 4.32

For the contract to be eligible for this rate, the following conditions must be met:

- a) Metering at each delivery point must be done by a single communicating meter installed by Hydro-Québec;
- b) The customer must have created a Customer Space at www.hydroquebec.com and, for as long as this rate applies, this Space must include a valid email address to which the peak demand event notifications will be sent;
- c) The customer must not have terminated a Rate Flex M contract during the previous winter period;
- d) The electrical installation must not be supplied by an off-grid system;

- e) The customer must not be signed up for any of the rate options described in Chapter 6;
- f) The customer must not be signed up for a Net Metering Option. However, this condition will cease to apply on March 31, 2026.

Conditions applicable to peak demand events 4.33

Peak demand events may occur at any time during peak hours. They must meet the following conditions:

Maximum number of events per day:	2
Minimum interval between 2 events (hours):	7
Duration of each event (hours):	3 or 4
Maximum duration of events per winter period (hours):	100

Peak demand event notifications 4.34

Hydro-Québec will notify the customer by email, at the address given in the Customer Space, before 17:00 on the day prior to each peak demand event, indicating the event start and end times. It will also post all peak demand event notifications on its website at www.hydroquebec.com.

Hydro-Québec cannot be held responsible for non-receipt of a notification due to the failure of systems or equipment belonging to the customer or the customer's telecommunications provider.

Structure of Rate Flex M 4.35

The structure of monthly Rate Flex M for an annual contract is as follows:

\$17.573 per kilowatt of billing demand
plus

- a) During the winter period:

3.820¢ per kilowatthour for energy consumed outside peak demand events, and

60.262¢ per kilowatthour for energy consumed during peak demand events;

or

b) During the summer period:

6.061¢ per kilowatthour for the first
210,000 kilowatthours, and

4.495¢ per kilowatthour for the remaining
consumption.

The minimum monthly bill is \$14.860 when single-phase electricity is delivered or \$44.581 when three-phase electricity is delivered.

If applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4, apply.

Billing demand**4.36**

The billing demand at Rate Flex M is equal to the maximum power demand during the consumption period in question, but is never less than the minimum billing demand as defined in Article 4.37.

Minimum billing demand**4.37**

The minimum billing demand for any given consumption period is equal to 65% of the maximum power demand during a consumption period that falls wholly within the winter period included in the 12 consecutive monthly periods ending at the end of the consumption period in question.

When the minimum billing demand reaches or exceeds 5,000 kilowatts, the contract ceases to be eligible for Rate Flex M. It then becomes subject to Rate L, if it is eligible for such rate, or to Rate LG.

Rate L or Rate LG applies as of the beginning of the consumption period during which the minimum billing demand reaches or exceeds 5,000 kilowatts.

When a customer terminates an annual contract and signs another for the delivery of electricity at the same location and for similar purposes within the following 12 consecutive monthly periods, these two contracts are considered to be a single contract for calculation of the minimum billing demand.

For a change to Rate Flex M from Rate M, Rate G, Rate G9, Rate LG or a domestic rate, the minimum billing demand is determined as specified in this article.

Limitation **4.38**

Hydro-Québec reserves the right to terminate a customer's Rate Flex M contract if it encounters recurring problems in gathering hourly metering data.

Termination **4.39**

The customer may terminate the Rate Flex M contract at any time by calling Hydro-Québec's customer services.

The contract will then become subject to Rate M, or to any other rate for which it is eligible, the day after Hydro-Québec is notified of the termination.

If the rate change occurs partway through a consumption period, the period will be split into two sub-periods for billing purposes. Consumption will then be billed at Rate Flex M based on Hydro-Québec's meter reading on the day it receives the customer's termination notice and at the new rate based on the reading taken at the end of the consumption period.

Installation of maximum-demand meter **4.40**

Hydro-Québec installs a maximum-demand meter for all Rate Flex M contracts in order to measure the maximum power demand.

SECTION 8

RATE FLEX G9 (INTERIM RATE)

Application **4.41**

Rate Flex G9 is an experimental peak rate that applies to a medium-power contract characterized by limited use of billing demand.

This rate does not apply when the customer is benefiting from the Industrial Revitalization Rate described in Section 4 of this chapter, or from the options, rate or conditions described in sections 2, 4, 5, 7 and 8 of

Chapter 6 (Demand Response – Commitment Option, Additional Electricity Option, Economic Development Rate, running in or testing of equipment).

Definitions **4.42**

In this section, the following definitions apply:

peak demand event: The sequence of peak hours indicated by Hydro-Québec in the peak demand event notification sent to the customer in accordance with Article 4.46.

peak hours: All hours from 06:00 to 09:00 and from 16:00 to 20:00 during the winter period, excluding:

- a) Saturdays and Sundays;
- b) December 24, 25, 26 and 31, January 1 and 2, as well as Good Friday and Easter Monday when the latter fall within the winter period.

Sign-up procedure **4.43**

To sign up for this rate, the customer must submit a request through the Customer Space or contact Hydro-Québec's customer services by November 20, 2025.

Hydro-Québec then has 5 business days to analyze the customer's request. Subject to Hydro-Québec's written approval, the rate will apply no later than December 1, 2025.

Eligibility **4.44**

For the contract to be eligible for this rate, the following conditions must be met:

- a) Metering at each delivery point must be done by a single communicating meter installed by Hydro-Québec;
- b) The customer must have created a Customer Space at www.hydroquebec.com and, for as long as this rate applies, this Space must include a valid email address to which the peak demand event notifications will be sent;
- c) The customer must not have terminated a Rate Flex G9 contract during the previous winter period;

- d) The customer must not be signed up for any of the rate options described in Chapter 6;
- e) The electrical installation must not be supplied by an off-grid system.

Conditions applicable to peak demand events 4.45

Peak demand events may occur at any time during peak hours. They must meet the following conditions:

Maximum number of events per day:	2
Minimum interval between 2 events (hours):	7
Duration of each event (hours):	3 or 4
Maximum duration of events per winter period (hours):	100

Peak demand event notifications 4.46

Hydro-Québec will notify the customer by email, at the address given in the Customer Space, before 17:00 on the day prior to each peak demand event, indicating the event start and end times. It will also post all peak demand event notifications on its website at www.hydroquebec.com.

Hydro-Québec cannot be held responsible for non-receipt of a notification due to the failure of systems or equipment belonging to the customer or the customer's telecommunications provider.

Structure of Rate Flex G9 4.47

The structure of monthly Rate Flex G9 for an annual contract is as follows:

\$5.098 per kilowatt of billing demand
plus

- a) During the winter period:

9.761¢ per kilowatthour for energy consumed outside peak demand events, and

60.262¢ per kilowatthour for energy consumed during peak demand events;

or

b) During the summer period:

12.148¢ per kilowatthour.

The minimum monthly bill is \$14.860 when single-phase electricity is delivered or \$44.581 when three-phase electricity is delivered.

If the maximum power demand exceeds the real power during a consumption period, the excess is subject to a monthly charge of \$12.475 per kilowatt.

If applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4, apply.

Billing demand **4.48**

The billing demand at Rate Flex G9 is equal to the maximum power demand during the consumption period in question, but is never less than the minimum billing demand as defined in Article 4.49.

Minimum billing demand **4.49**

The minimum billing demand for a contract at Rate Flex G9 is equal to 75% of the maximum power demand during a consumption period that falls wholly within the winter period included in the 12 consecutive monthly periods ending at the end of the consumption period in question.

When a customer terminates an annual contract and signs another for the delivery of electricity at the same location and for similar purposes within the following 12 consecutive monthly periods, these two contracts are considered to be a single contract for calculation of the minimum billing demand.

For a change to Rate Flex G9 from Rate G9, Rate G, Rate M, Rate LG or a domestic rate, the minimum billing demand is determined as specified in this article.

Limitation **4.50**

Hydro-Québec reserves the right to terminate a customer's Rate Flex G9 contract if it encounters recurring problems with gathering hourly metering data.

Termination**4.51**

The customer may terminate the Rate Flex G9 contract at any time by calling Hydro-Québec's customer services.

The contract will then become subject to Rate G9, or to any other rate for which it is eligible, the day after Hydro-Québec is notified of the termination.

If the rate change occurs partway through a consumption period, the period will be split into two sub-periods for billing purposes. Consumption will then be billed at Rate Flex G9 based on Hydro-Québec's meter reading on the day it receives the customer's termination notice and at the new rate based on the reading taken at the end of the consumption period.

Installation of a maximum-demand meter**4.52**

Hydro-Québec installs a maximum-demand meter for all Rate Flex G9 contracts in order to measure the maximum power demand.

CHAPTER 5

RATES FOR LARGE POWER

SECTION 1

RATE L

Application 5.1

Rate L applies to an annual contract where the minimum billing demand is at least 5,000 kilowatts and which is principally related to an industrial activity.

Structure of Rate L 5.2

The structure of monthly Rate L is as follows:

\$14.476 per kilowatt of billing demand

plus

3.681¢ per kilowatthour.

If applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4, apply.

Contract power 5.3

The contract power is equal to the minimum billing demand set for a contract under Rate L. It must not be less than 5,000 kilowatts, nor exceed the available power.

When a customer terminates an annual contract and signs another for the delivery of electricity at the same location and for similar purposes within the following 12 consecutive monthly periods, these two contracts are considered to be a single contract in regard to the contract power.

Billing demand 5.4

The billing demand at Rate L is equal to the maximum power demand during the consumption period in question, but is never less than the contract power defined in Article 5.3.

Condition related to the power factor for power demand less than 5,000 kilowatts **5.5**

If, during a consumption period, the maximum power demand exceeds the highest real power demand, which is less than 5,000 kilowatts, Hydro-Québec applies the demand charge to the difference between:

- a) the maximum power demand up to 5,000 kilowatts and
- b) the highest real power demand.

If applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4, apply.

Optimization charge **5.6**

If, in a day during the winter period, the maximum power demand exceeds 110% of the contract power, the overrun is subject to a daily optimization charge of \$8.485 per kilowatt. For each day during which such an overrun occurs, the charge will be applied to the number of kilowatts making up the highest overrun during the day.

For each consumption period, however, the amount calculated by applying the daily optimization charges is limited to the amount that would result from applying a monthly optimization charge to the portion of the billing demand exceeding 110% of the contract power. This optimization charge is \$25.451 per kilowatt.

For purposes of this article, a day is defined as a 24-hour period beginning at 00:00.

Increase in contract power **5.7**

The customer may increase the contract power at any time by submitting a request to Hydro-Québec in writing, but not more than once per consumption period. The revision of the contract power takes effect, at the customer's discretion, either at the beginning of the consumption period during which Hydro-Québec receives the written request for revision or at the beginning of one of the 3 previous consumption periods. The customer may also increase the contract power at a specific date and time. To do so, they must notify Hydro-Québec in writing and Hydro-Québec must receive the notice during the consumption period in question or within 20 days following it.

Decrease in contract power**5.8**

The customer may decrease the contract power after 12 consumption periods starting from the last increase or decrease, unless they are bound by contract to maintain that power for a longer period. The customer must submit a request to Hydro-Québec in writing to that effect.

Provided that the decrease in contract power takes effect only after the 12 consumption periods stipulated in the preceding paragraph, the date and time at which it takes effect are at the customer's discretion and in accordance with their written request, within one of the following periods:

- a) the consumption period during which Hydro-Québec receives the written request for revision; or
- b) the previous consumption period; or
- c) any subsequent consumption period.

If, because of a decrease in contract power in accordance with the first paragraph of this article, the contract ceases to be eligible for Rate L, Rate M takes effect on a date and time chosen by the customer within the consumption period during which Hydro-Québec receives the request, the previous consumption period or any subsequent consumption period, in accordance with the customer's written request.

Division of consumption period**5.9**

When a consumption period overlaps with the beginning or the end of the winter period, the billing demand is set separately for the summer period portion and the winter period portion, but it shall under no circumstances be less than the contract power.

When a revision of the contract power carried out in accordance with Article 5.7 or 5.8 takes effect on a date not coinciding with the beginning of a consumption period, the billing demand may be different for each part of the consumption period, provided that the revision entails a change in the contract power equal to or greater than the higher of the following values:

- a) 10% of the contract power; or
- b) 1,000 kilowatts.

However, for each part of the consumption period, the billing demand must not be less than the corresponding contract power.

Revision of contract power early in contract **5.10**

Notwithstanding articles 5.7 and 5.8, the customer may retroactively increase or decrease the contract power once within the first 12 monthly periods of the contract, provided that the following conditions are met:

- a) The customer's current contract is an annual one;
- b) It is the customer's first annual contract at that location;
- c) The installation supplied under this contract is:
 - a new installation or
 - an installation which, under the current contract, is used for purposes other than those of the previous contract, or whose functioning has been significantly modified.

The revised contract power comes into effect either at the beginning of the contract or at the beginning of any consumption period, at the customer's discretion. It applies retroactively:

- until the end of the consumption period during which Hydro-Québec receives the customer's written request, or
- until the effective date of any previous increase in contract power.

A revision of contract power done at the beginning of a consumption period under this article will cancel any other contract power revision applied at another date during this consumption period.

The revised contract power must not be less than that which the customer agreed by contract to maintain, in consideration of the costs incurred by Hydro-Québec to supply that customer's electrical installation.

If, because of a decrease in contract power, the contract ceases to be eligible for Rate L, Rate M comes into effect either at the beginning of the contract or at the beginning of any consumption period, at the customer's discretion.

To obtain this revision, the customer must submit a request to Hydro-Québec in writing before the end of the 14th monthly period following the date of the beginning of the contract.

Power demand excluded for billing **5.11**

When part of the contract power is interruptible, the power demand during recovery periods provided for in Article 6.24 is not taken into account in determining the billing demand.

When the customer disconnects power factor correction equipment at Hydro-Québec's request, the apparent power demand during those periods is also not taken into account in determining the billing demand.

Credits for reduction in or interruption of electricity supply **5.12**

The customer may obtain a credit on the amount payable for power when, for a continuous period of at least 1 hour:

- a) electricity was not supplied to the customer because Hydro-Québec interrupted the supply of electricity; or
- b) the customer was prevented from using electricity, wholly or in part, at the request of Hydro-Québec; or
- c) the customer was prevented from using electricity, wholly or in part, as a result of war, rebellion, rioting, a serious epidemic, fire, breakdown of equipment in the customer's substation or any other event of force majeure, excluding strikes or lockouts on the customer's premises.

The customer may also obtain a credit on the amount payable for power if Hydro-Québec has interrupted the supply of electricity twice or more in the same day for a combined total of at least 1 hour.

To obtain the credit, the customer must submit a request in writing to Hydro-Québec within 60 days following the end of the incident.

In the case of an interruption of electricity supply, the credit equals the difference between the amount that would have been payable for the complete consumption period and the amount payable for that period with the number of hours of interruption subtracted. In the case of a reduction in electricity supply, it equals the difference between the amount that would have been payable for the complete consumption period and the amount payable for that period, adjusted according to the number of hours the supply of electricity was reduced and the average energy consumed during those hours, expressed in kilowatts.

This credit does not apply when Hydro-Québec refuses to deliver electricity to the customer as provided for in rates LD and LP, respectively described in sections 5 and 6 of this chapter, or prohibits consumption as provided for in the Additional Electricity Option described in Section 4 of Chapter 6, or when service has been suspended due to breach of contract.

For purposes of this article, a day is defined as a 24-hour period beginning at 00:00.

Charge for failure to implement an electricity management system (interim provision) 5.13

As of April 1, 2027, a 3% charge will be applied to the total monthly bill of any Rate L customer who has not implemented an electricity management system (EMS) compliant with Hydro-Québec's requirements.

SECTION 2

RATE LG

Application 5.14

Rate LG applies to an annual contract with a minimum billing demand of at least 5,000 kilowatts, unless the contract is principally related to an industrial activity.

Structure of Rate LG 5.15

The structure of monthly Rate LG is as follows:

\$15.963 per kilowatt of billing demand

plus

4.165¢ per kilowatthour.

If applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4, apply.

Billing demand **5.16**

The billing demand at Rate LG is equal to the maximum power demand during the consumption period in question, but is never less than the minimum billing demand as defined in Article 5.18.

Condition related to the power factor for power demand less than 5,000 kilowatts **5.17**

If, during a consumption period, the maximum power demand exceeds the highest real power demand, which is less than 5,000 kilowatts, Hydro-Québec applies the demand charge to the difference between:

- a) the maximum power demand up to 5,000 kilowatts and
- b) the highest real power demand.

If applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4, apply.

Minimum billing demand **5.18**

The minimum billing demand for any given consumption period is equal to 75% of the maximum power demand during a consumption period that falls wholly within the winter period included in the 12 consecutive monthly periods ending at the end of the given consumption period. This value cannot be less than 5,000 kilowatts.

When a customer terminates an annual contract and signs another for the delivery of electricity at the same location and for similar purposes within the following 12 consecutive monthly periods, these two contracts are considered to be a single contract for calculation of the minimum billing demand.

For a change to Rate LG from Rate G, Rate G9, Rate M or a domestic rate, the minimum billing demand is determined as specified in this article.

Minimum billing demand of less than 5,000 kilowatts 5.19

The customer with a Rate LG contract may opt for Rate M at any time by submitting a rate-change request to Hydro-Québec in writing. The rate change takes effect either at the beginning of the consumption period during which Hydro-Québec receives the written request, at any date and time during that consumption period or at the beginning of the previous consumption period, at the customer's discretion.

Charge for unused available power 5.20

If, during the last 12 consecutive consumption periods, the customer's highest real power demand is less than 60% of the available power, the difference between the highest real power demand during the last 12 consecutive consumption periods and the available power is subject to a charge for unused available power of \$37.089 per kilowatt.

If the customer's last 12 consecutive consumption periods do not reflect their normal consumption profile, Hydro-Québec reserves the right to use any other method it deems more appropriate to calculate the maximum power demand.

Power demand excluded for billing 5.21

When the customer disconnects power factor correction equipment at Hydro-Québec's request, the apparent power demand during those periods is not taken into account in determining the billing demand.

Credits for reduction in or interruption of electricity supply 5.22

The customer may obtain a credit on the amount payable for power when, for a continuous period of at least 1 hour:

- a) electricity was not supplied to the customer because Hydro-Québec interrupted the supply of electricity; or

- b) the customer was prevented from using electricity, wholly or in part, at the request of Hydro-Québec; or
- c) the customer was prevented from using electricity, wholly or in part, as a result of war, rebellion, rioting, a serious epidemic, fire or any other event of force majeure, excluding strikes or lockouts on the customer's premises.

The customer may also obtain a credit on the amount payable for power if Hydro-Québec has interrupted the supply of electricity twice or more in the same day for a combined total of at least 1 hour.

To obtain the credit, the customer must submit a request to Hydro-Québec in writing within 60 days following the end of the incident.

In the case of an interruption of electricity supply, the credit equals the difference between the amount that would have been payable for the complete consumption period and the amount payable for that period with the number of hours of interruption subtracted. In the case of a reduction in electricity supply, it equals the difference between the amount that would have been payable for the complete consumption period and the amount payable for that period, adjusted according to the number of hours the supply of electricity was reduced and the average energy consumed during those hours, expressed in kilowatts.

This credit does not apply when Hydro-Québec refuses to deliver electricity to the customer as provided for in rates LD and LP, respectively described in sections 5 and 6 of this chapter, or prohibits consumption as provided for in the Additional Electricity Option described in Section 4 of Chapter 6, or when service has been suspended due to breach of contract.

For purposes of this article, a day is defined as a 24-hour period beginning at 00:00.

Conditions applying to municipal systems

5.23

A refund is provided to a municipal system at Rate LG as compensation for the distribution activities it must engage in to provide electricity to one or more Rate LG or Rate L customers whose installations are supplied at medium voltage.

In cases where the customers concerned have Rate LG contracts, the municipal system is entitled to a refund of 15% of the amounts billed to each of these customers if the maximum power demand under their contracts during a given consumption period is between 5,000 and 12,000 kilowatts.

If the maximum power demand is between 4,300 and 5,000 kilowatts, the percentage of the refund is determined as follows:

$$\frac{(\text{Maximum power demand} - 4,300 \text{ kW}) \times 15\%}{700 \text{ kW}}$$

If the maximum power demand is greater than 12,000 kilowatts, the percentage of the refund is determined as follows:

$$\frac{12,000 \text{ kW} \times 15\%}{\text{Maximum power demand}}$$

If the customers concerned have Rate L contracts, the municipal system is entitled to a refund which is equal to the sum of the following elements:

- a) an amount resulting from the application of the percentage of the refund as set out in this article to the amounts the municipal system would have obtained if the customers had been billed at Rate LG prices;
- b) an amount corresponding to the difference between the amounts the municipal system would have obtained if the customers had been billed at Rate LG prices and the amounts effectively billed at Rate L.

For a municipal system to be entitled to the refund, the customer cannot be a former Hydro-Québec customer, unless they became a customer of the municipal system with Hydro-Québec's consent.

If the maximum power demand is less than 4,300 kilowatts, the municipal system is not entitled to a refund.

To obtain a refund, the municipal system must provide Hydro-Québec, for each consumption period, with supporting documents proving that it is entitled to a refund.

SECTION 3

RATE G9

Application	5.24
--------------------	-------------

General Rate G9, described in Section 2 of Chapter 4, applies to an annual large-power contract.

SECTION 4

RATE H

Application	5.25
--------------------	-------------

General Rate H applies to an annual large-power contract characterized by utilization of power mainly outside winter weekdays.

Rate H is not offered to independent producers.

Definition	5.26
-------------------	-------------

In this section, the following definition applies:

winter weekday: The period between 06:00 and 22:00 during all business days in the winter period. Hydro-Québec may, on verbal notice to the customer, consider winter Saturdays and Sundays from 06:00 to 22:00 to be “winter weekdays.”

Business days in the winter period exclude December 24, 25, 26 and 31, January 1 and 2, as well as Good Friday, Easter Saturday, Easter Sunday and Easter Monday when the latter four days fall within the winter period.

Structure of Rate H	5.27
----------------------------	-------------

The structure of monthly Rate H is as follows:

\$6.390 per kilowatt of billing demand

plus

6.448¢ per kilowatthour for the energy consumed outside winter weekdays, and

21.790¢ per kilowatthour for the energy consumed on winter weekdays.

If applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4, apply.

Billing demand**5.28**

The billing demand under Rate H is equal to the higher of the following amounts:

- a) the highest maximum power demand during the 24 monthly periods ending at the end of the consumption period in question; or
- b) the contract power, which cannot be less than 5,000 kilowatts.

For a change from Rate H to Rate L, Rate LG, Rate G9 or Rate M, the minimum billing demand for the first 12 consumption periods at the new rate cannot be less than:

- a) 90% of the maximum power demand during the last 12 consumption periods, including the most recent period, for a change to Rate L; or
- b) 75% of the maximum power demand during the last 12 consumption periods, including the most recent period, for a change to Rate LG or Rate G9; or
- c) 65% of the maximum power demand during the last 12 consumption periods, including the most recent period, for a change to Rate M.

SECTION 5

RATE LD

Application**5.29**

Rate LD is offered to a customer whose usual source of power has temporarily failed if the sum of their normal independent production and the minimum billing demand under the applicable general rate totals 5,000 kilowatts or more. In such cases, the electricity is delivered as a backup energy source. If part of the load is always supplied by Hydro-Québec, that portion will be billed at Rate L, if it is eligible for that rate, or at one of the general rates.

Rate LD includes a non-firm option offered only to an independent producer of power from forest biomass or to a customer under contract to purchase electricity from an independent producer whose facilities are located on a site adjacent to the customer's site and whose power is generated from forest biomass.

Rate LD does not apply if backup generators are the only equipment used by the customer to produce electricity.

Rate LD may not be used for the resale of energy to a third party.

Definitions

5.30

In this section, the following definitions apply:

base rate: The rate applicable to the part of the load always supplied by Hydro-Québec.

normal independent production: The production that reflects the normal utilization of independent production during the consumption period in question. It is set out in a written agreement between the customer and Hydro-Québec.

normal power: The maximum power demand met by Hydro-Québec outside planned or unplanned interruptions in the consumption period in question. This value cannot be less than the billing demand under the base rate, where applicable.

planned interruption: A period, planned by the customer and approved by Hydro-Québec, during which all or part of the equipment used to produce electricity is temporarily out of service.

power demand met by Hydro-Québec: The power demand recorded by the equipment that meters the load supplied by Hydro-Québec.

power demand met by the independent producer: The power demand recorded by the equipment that meters the load supplied by independent production.

unplanned interruption: A period, not planned by the customer, during which all or part of the equipment used to produce electricity is temporarily out of service.

winter weekday: The period between 06:00 and 22:00 during all business days in the winter period. Hydro-Québec may, on verbal notice to the customer, consider winter Saturdays and Sundays from 06:00 to 22:00 to be “winter weekdays.”

Business days in the winter period exclude December 24, 25, 26 and 31, January 1 and 2, as well as Good Friday, Easter Saturday, Easter Sunday and Easter Monday when the latter four days fall within the winter period.

Available power **5.31**

The available power under a contract at Rate LD is set out in a written agreement between the customer and Hydro-Québec.

Structure of Rate LD **5.32**

a) Firm option

The structure of monthly firm Rate LD is as follows:

\$6.390 per kilowatt of billing demand

plus

6.448¢ per kilowatthour for energy consumed outside winter weekdays, and

21.790¢ per kilowatthour for energy consumed on winter weekdays.

b) Non-firm option

The structure of non-firm Rate LD is as follows:

\$0.639 per kilowatt of billing demand per day for planned interruptions, and

\$1.278 per kilowatt of billing demand per day for unplanned interruptions,

plus

6.448¢ per kilowatthour.

In the case of the non-firm option, the amount billed as demand may not be higher than the product of the monthly price of \$6.390 per kilowatt and the highest daily billing demand for the consumption period in question.

If applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4, apply to the firm and non-firm options. In the case of the non-firm option, the applicable monthly supply credit and adjustment are multiplied by the ratio of the daily price to the monthly price for conversion to daily amounts.

Billing demands**5.33****a) Determination of billing demand under the base rate**

If applicable, the billing demand under the base rate is equal to the maximum power demand, but cannot be less than the minimum billing demand.

The power demand under the base rate is calculated using the following formula:

$$PA_{\text{base}} = PA_{\text{HQ}} - PR$$

where

PA_{base} = the power demand under the base rate;

PA_{HQ} = the power demand met by Hydro-Québec;

PR = the backup power, i.e., the lesser of:

i) $PAN - PF$

ii) $PA_{\text{HQ}} - PN$

where

PAN = the normal independent production;

PF = the power demand met by the independent producer;

PN = the normal power.

The backup power cannot be less than 0.

b) Determination of billing demand under firm and non-firm Rate LD

If applicable, the billing demand under firm Rate LD corresponds to the maximum power demand, but cannot be less than the highest power demand under Rate LD during the last 24 monthly periods ending at the end of the consumption period in question.

If applicable, the daily billing demand under non-firm Rate LD is the maximum power demand under Rate LD for each day on which there has been an interruption.

The power demand under firm and non-firm Rate LD is calculated using the following formula:

$$PA_{LD} = PA_{HQ} - PA_{base}$$

where

$$PA_{LD} = \text{the power demand at Rate LD.}$$

Metering

5.34

In the event that the load supplied by independent production cannot be separated from that supplied by Hydro-Québec, the customer must assume the cost of the metering equipment installed by Hydro-Québec to record independent production.

Conditions regarding the delivery of electricity - Non-firm option

5.35

In order to be able to consume electricity during planned interruptions, a customer whose contract is subject to non-firm Rate LD must submit a request to Hydro-Québec in writing at least 2 business days before the interruption during the summer period and at least 7 days before the interruption during the winter period, specifying the period when the electricity is needed and the quantity required. Hydro-Québec accepts or denies the request, depending on system availability during the period indicated by the customer, and confirms acceptance in writing to the customer, if applicable. A customer who wishes to change the date must provide reasonable notice to Hydro-Québec. Hydro-Québec notifies the customer as soon as possible of its decision to accept or deny the request.

Whenever possible, Hydro-Québec agrees to notify the customer in advance of the hours during which electricity consumption will not be allowed. However, depending on system management requirements and availability, Hydro-Québec may, at its discretion, interrupt the delivery of backup power on 2 hours' notice for a planned or unplanned interruption in the winter period, and for an unplanned interruption in the summer period.

If the customer consumes electricity during any period when delivery has been refused by Hydro-Québec, all the electricity consumed as backup power during those hours will be billed at the price of 60.262¢ per kilowatthour.

If, during a period when backup power is being delivered, the customer wishes to extend the period specified in the request, the customer must submit a new request to Hydro-Québec in writing, indicating the additional duration of the delivery. Hydro-Québec accepts or denies the request depending on system availability during the period indicated by the customer.

Restrictions – Non-firm option **5.36**

The provisions of the non-firm option shall not be interpreted as an obligation on the part of Hydro-Québec to assume additional costs for connection, equipment installation or reinforcement of the transmission or distribution system to serve such customers. The customer must assume all the costs associated with the delivery of electricity under the non-firm option.

Hydro-Québec will neither build new facilities nor allocate existing facilities in order to guarantee the availability of energy for backup loads supplied under the non-firm option.

Changing from the firm to the non-firm option **5.37**

A customer subject to firm Rate LD may submit a request to Hydro-Québec in writing asking that the contract be subject to non-firm Rate LD, as long as they are eligible in accordance with the second paragraph of Article 5.29. The conditions of the non-firm option will apply as of the date on which Hydro-Québec receives the written request from the customer.

Notwithstanding the above, for the 24 monthly periods following the application of non-firm Rate LD, the billing demand for each monthly period will be the highest power demand under firm Rate LD during the 24 previous monthly periods.

Changing from the non-firm to the firm option 5.38

A customer subject to non-firm Rate LD may submit a request to Hydro-Québec in writing asking that the contract be subject to firm Rate LD. The conditions of the non-firm option will apply as of the date on which Hydro-Québec receives the written request from the customer.

Changing from the non-firm or firm option to Rate L 5.39

A customer subject to firm Rate LD may submit a request in writing to Hydro-Québec asking that the contract be subject to Rate L if it is eligible for such rate. The customer's contract power may not be lower than the sum of:

- a) the maximum power demand met by the independent producer during the last 12 consumption periods; and
- b) 90% of the customer's billing demand under the applicable rate before the change of rate.

A customer with a contract at non-firm Rate LD may not terminate such contract during the first year. After that period, Hydro-Québec may require a maximum of 3 years' notice before the load associated with the backup power can be transferred to Rate L, which would then apply to the contract for a minimum of 12 consecutive consumption periods.

SECTION 6

RATE LP

Application 5.40

Rate LP applies to an annual contract for large power under which electricity is delivered as an auxiliary source of energy for a fuel-fired boiler.

Under a contract at Rate LP, the available power required by the customer must be at least 5,000 kilowatts, and the electricity must be metered separately from that which is delivered under any contract subject to any other rate. Rate LP applies only to contracts that were subject to that rate on April 1, 2006.

Available power **5.41**

The available power under a contract at Rate LP is set out in a written agreement between the customer and Hydro-Québec. It may be revised once a year, on the contract renewal date, subject to the availability of the Hydro-Québec system.

Hydro-Québec may refuse to deliver electricity at this rate, based on system management requirements and availability.

Structure of Rate LP **5.42**

The structure of Rate LP is as follows:

Annual fixed charge: \$1,205.227.

Subject to Article 5.48, all energy consumed is billed at the price for additional electricity determined according to Article 6.52 for the month in question.

Payment of the annual fixed charge **5.43**

The annual fixed charge is included in the bill issued for the first consumption period ending after April 1. It will not be reimbursed if the customer terminates the Rate LP contract.

Contract renewal **5.44**

The Rate LP contract is automatically renewed on April 1 of each year, unless the customer notifies Hydro-Québec in writing, prior to March 1 that same year, of their intention to terminate the contract.

Termination of contract during the year **5.45**

The customer may terminate the Rate LP contract at any time. They must notify Hydro-Québec of such decision in writing, indicating the date at which the termination takes

effect. The customer's contract then ceases to be eligible for Rate LP.

Hydro-Québec may terminate Rate LP at any time, upon 3 months' written notice.

Change from Rate LP to another rate **5.46**

Should a customer wish to have the power under a Rate LP contract transferred to a contract they already have at Rate L, Rate LG or any other applicable rate, they must notify Hydro-Québec in writing at least 6 months prior to the desired date of the change. Such change shall take effect at the end of this 6-month period, or earlier, provided that the appropriate metering equipment has been installed.

Conditions regarding the delivery of electricity **5.47**

To be able to consume electricity, a customer already under contract at Rate LP must submit a request in writing to Hydro-Québec at least 72 hours before the desired delivery period begins, specifying the period during which the electricity is needed. Hydro-Québec may accept or deny the request based on system management requirements and availability during the period indicated by the customer. If Hydro-Québec accepts the request, it provides a confirmation in writing, indicating the agreed-upon delivery period and terms.

If, during a period when electricity is being delivered under a contract at Rate LP, the customer wishes to extend the period specified in the request, they must submit another request in writing to Hydro-Québec, specifying the additional delivery period at least 72 hours before it begins. Hydro-Québec processes the request according to the procedure described in the first paragraph of this article.

Commitment **5.48**

If Hydro-Québec accepts a customer request under Article 5.46 during the summer period, it shall guarantee delivery of the electricity during the agreed-upon period and under the agreed-upon conditions.

If Hydro-Québec accepts a customer request under Article 5.46 during the winter period, it shall guarantee

delivery of the electricity for a 48-hour period or for the requested period, whichever is shorter. Should the customer wish to extend the consumption of electricity under the Rate LP contract, they must submit a new authorization request in writing to Hydro-Québec.

Unauthorized consumption of electricity **5.49**

Should the customer consume electricity during periods for which delivery was denied or without having made a prior request, all electricity consumed during such periods shall be billed at 60.262¢ per kilowatthour.

This article shall not be interpreted as permission to consume electricity without authorization.

Credit for supply **5.50**

No credit for supply is applicable to the rate described in this section.

Restriction **5.51**

The provisions of this section shall not be interpreted as an obligation on the part of Hydro-Québec to assume connection or installation costs for the purpose of enabling a customer to sign up for a Rate LP contract.

CHAPTER 6

RATE OPTIONS AND OPTIONAL RATES MAINLY FOR BUSINESS CUSTOMERS

SECTION 1

LOAD RETENTION RATE

Subsection 1.1 – Rate L Customers of Hydro-Québec

Application 6.1

The Load Retention Rate applies to a contract that was subject to Rate L on the date when the customer signed up for the Load Retention Rate.

Definitions 6.2

In this section, the following definitions apply:

collaborator: Any person or corporate entity, other than a supplier, that provides items defined as being among the customer's variable costs.

reference period: A period of 12 months for which data are available and which precedes the month when Hydro-Québec receives the customer's written application.

supplier: Any person or corporate entity supplying goods or services defined as being among the customer's variable costs, excluding a corporation or partnership which controls the customer, is controlled by the customer, or is controlled along with the customer by another entity.

variable costs: Production costs that vary proportionally with quantities produced. These costs include but are not limited to the cost of raw materials, labour and energy. They exclude all other expenses that do not vary proportionally with quantities produced, such as investments in fixed assets, depreciation and amortization, financing costs, as well as overhead and administrative expenses.

For purposes of the Load Retention Rate, electricity costs are not included in the variable costs.

Sign-up procedure**6.3**

A customer wishing to sign up for the Load Retention Rate must submit a request to Hydro-Québec in writing. The customer's request must contain the following information:

- a) Financial statements covering the 3 years preceding the customer's request, prepared and audited according to generally accepted accounting principles and auditing standards. These financial statements must include the statement of operations, balance sheet and statement of cash flows, with all the related notes;
- b) Interim financial reports for the period between the end of the last audited fiscal year and the customer's request;
- c) Detailed variable costs for the product or products produced by means of the load for which the application is being made, the change in these costs over the reference period and a projection of these costs for the following 12 months;
- d) The price at which the product or products in question were sold over the reference period and a projection of said price for the following 12 months.

Eligibility**6.4**

The customer's contract is eligible for the Load Retention Rate if the customer meets the conditions stipulated in Article 6.3 as well as the following:

- a) The customer must demonstrate that they are experiencing financial difficulties entailing cessation of all or part of their operations;
- b) The customer must demonstrate, by invoices or other documents, that they have obtained nonrefundable reductions from their other suppliers or collaborators during the commitment period;
- c) The customer must demonstrate that steps will be taken to improve the firm's profitability.

Hydro-Québec may check all information provided by the customer.

Subject to Hydro-Québec's written approval, the contract becomes subject to this rate either at the beginning of the consumption period during which Hydro-Québec receives the request or at the beginning of one of the 3 subsequent consumption periods, at the customer's discretion and according to the customer's written request.

Property of information **6.5**

Subject to all applicable legislation, Hydro-Québec undertakes to keep confidential all information provided by the customer for the purposes of this rate and identified by the customer as confidential.

Duration of commitment **6.6**

The Load Retention Rate applies initially for a maximum of 24 consumption periods, according to the following conditions:

a) First sign-up

- The Load Retention Rate applies to the contract for 12 consumption periods, in accordance with the provisions of articles 6.7 and 6.9.

b) Second sign-up

- The Load Retention Rate may be applied again to the same contract for another 12 consumption periods, consecutive or not to the first 12, but beginning no later than 12 months after the end of the first application period.
- The customer must submit a new request to Hydro-Québec in writing as provided for in Article 6.3 and show that they are still eligible for the Load Retention Rate, in accordance with Article 6.4. This rate is then applied according to the terms and conditions described in articles 6.8 and 6.9.

After 60 months following the end of the last application period for the Load Retention Rate under subparagraphs a) and b), this rate may be applied again to the same contract for one last time, under the same conditions. The customer must then submit a new request in writing to Hydro-Québec as provided for in this subsection.

Determination of the billing coefficient for the first sign-up 6.7

The billing coefficient is determined as follows for the first sign-up:

- a) The relative weight of each category of variable costs, based on the information obtained under subparagraph c) of Article 6.3, is determined for the reference period and expressed as a ratio;
- b) Each ratio calculated according to subparagraph a) is multiplied by the percentage of reduction granted by each supplier or collaborator, in accordance with Article 6.4, weighted in accordance with subparagraphs c) and d) below;
- c) Each ratio obtained in subparagraph b) is multiplied by the number of days, not exceeding 360 days, to which each reduction applies and the result is divided by 360 days;
- d) Each ratio obtained in subparagraph c) is multiplied by the number of units to which each reduction applies relative to the total number of units projected for the duration of the commitment;
- e) The ratios obtained for each cost category are added up;
- f) The result obtained in subparagraph e) is subtracted from the number 1, and the result is the billing coefficient.

Determination of the billing coefficient for the second sign-up 6.8

The billing coefficient is determined as follows for the second sign-up:

- a) The relative weight of each category of variable costs, based on the information obtained under subparagraph c) of Article 6.3, is determined for the reference period and expressed as a ratio;
- b) Each ratio calculated according to subparagraph a) is multiplied by the percentage of reduction granted by each supplier or collaborator, in accordance with Article 6.4, weighted in accordance with subparagraphs c) and d) below;

- c) Each ratio obtained in subparagraph b) is multiplied by the number of days, not exceeding 360 days, to which each reduction applies and the result is divided by 360 days;
- d) Each ratio obtained in subparagraph c) is multiplied by the number of units to which each reduction applies relative to the total number of units projected for the duration of the commitment;
- e) The ratios obtained for each cost category are added up. The total of the percentages must not exceed the total for the first sign-up;
- f) For each consumption period, the result obtained in subparagraph e) is multiplied by the number of consumption periods since the beginning of the second sign-up, minus one consumption period. This result is divided by 12;
- g) The result obtained in subparagraph f) is subtracted from the result obtained in subparagraph e);
- h) The result obtained in subparagraph g) is subtracted from the number 1, and the result is the billing coefficient.

Billing at the Load Retention Rate**6.9**

For each consumption period, the Load Retention Rate applies to all or to any eligible portion of a customer's load, as the case may be, as follows:

- a) An initial amount is calculated by applying the Rate L prices in effect to the customer's actual consumption data, taking into account, as applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4, and by multiplying the result by the billing coefficient determined in Article 6.7 in the case of a first sign-up or in Article 6.8 in the case of a second sign-up;
- b) A second amount is calculated based only on the price of energy in effect at Rate L, increased by 10%;
- c) The customer is billed the higher of a) or b) above.

The Load Retention Rate applies to all of the customer's load or to the eligible portion of the load, as the case may

be, such portion being established by written agreement between the customer and Hydro-Québec.

Subsection 1.2 – Rate L Customers of a Municipal System

Application 6.10

This subsection applies to a municipal system that applies the Load Retention Rate described in Subsection 1.1 of this chapter to a Rate L customer.

Object 6.11

For all eligible contracts, Hydro-Québec reimburses the municipal system the difference between the customer's Rate L bill and the bill calculated on the basis of the Load Retention Rate in accordance with Subsection 1.1 of this chapter.

Terms and conditions of application 6.12

The reimbursement provided for in Article 6.11 is subject to the following conditions:

- a) The customer of the municipal system must submit to the latter, in writing, a request as stipulated in Article 6.3 and provide all relevant supporting documents as well as all the information required under Article 6.4;
- b) The municipal system shall submit to Hydro-Québec the customer's request and all relevant supporting documents as well as all the information required under Article 6.4. Hydro-Québec determines whether the contract is eligible for the Load Retention Rate and notifies the municipal system in writing of its decision to accept or deny the request;
- c) Hydro-Québec pays the municipal system the difference between the Rate L bill and the Load Retention Rate bill throughout the period during which the contract remains eligible for the Load Retention Rate. Hydro-Québec adjusts the first electricity bill issued to the municipal system after the expiry of the 30-day period following the end of the consumption period during which the acceptance mentioned in subparagraph b) above was sent to the municipal system.

SECTION 2

DEMAND RESPONSE – COMMITMENT OPTION (INTERIM RATE)

Subsection 2.1 – General Provisions

Application 6.13

The Demand Response – Commitment Option (DR Commitment Option) described in this section applies to the Rate L or Rate LG contract of a customer who is able to curtail power during the winter period and is not already providing interruptible power under a special contract at the same delivery point or is not benefiting from the conditions described in sections 7 and 8 of this chapter (running in or testing of equipment).

As of April 1, 2026, this option will also apply to the Rate G or Rate M contract of a customer who meets the above conditions.

However, no customer can sign up for both this option and the Demand Response – Leeway Option described in Section 3 of this chapter.

Definitions 6.14

In this section, the following definitions apply:

average hourly power: The value in kilowatts of the average of the real power demands of four 15-minute integration periods.

average maximum daily power: The average of the highest real power demands recorded each day during the consumption period in question, outside of the recovery periods.

base power: The difference between:

- a) the contract power or the maximum power in the consumption period in question, whichever is higher, and
- b) the interruptible power.

Base power cannot be negative.

contribution coefficient: Estimated percentage of interruptible power that is actually curtailed, on average, by the customer when Hydro-Québec so requests.

effective hourly interruptible power: For each peak demand event hour, the difference between:

- a) the product of the average maximum daily power and the contribution coefficient for the consumption period in question, and
- b) the average hourly power.

The effective hourly interruptible power cannot be negative.

effective interruptible power: An estimate, expressed in kilowatts, of the interruptible power that is on average curtailed by the customer at Hydro-Québec's request. This estimate is the product of the interruptible power and the contribution coefficient of the consumption period in question.

interruptible power: The amount of real power the customer agrees not to use during peak demand events, at the request of Hydro-Québec.

maximum power: The highest real power demand during the consumption period in question, outside of recovery periods.

overrun: The difference, for each 15-minute integration period, between:

- a) the real power demand, and
- b) the sum of the base power and 5% of the interruptible power.

peak demand event: The sequence of peak hours during the weekdays or weekend days indicated by Hydro-Québec in the peak demand event notification sent to the customer in accordance with Article 6.20.

peak demand event hour: Each hour included in a peak demand event.

Sign-up date 6.15

The customer must submit a request to Hydro-Québec in writing or by any other agreed-upon means before September 30, indicating the quantity of interruptible power to which they wish to commit and the sub-option chosen among those described in Article 6.19.

Hydro-Québec then has 30 days to analyze the customer's request, in particular the risk related to the customer's commitment, the reliability of their equipment and the anticipated system impact of the power being offered, given any potential constraints associated with the customer's location. Hydro-Québec will then notify the customer in writing of its decision to accept or reject the request. The agreement comes into effect December 1.

Eligibility 6.16

To be eligible for the DR Commitment Option, the customer must have a load factor that is higher than 60% during the 12 consumption periods before their sign-up request.

If the 12 consumption periods preceding the sign-up request do not reflect the customer's normal consumption profile, Hydro-Québec may use another reference period or any other calculation method it deems more appropriate to determine whether the customer is eligible for this option.

Limitation 6.17

Hydro-Québec sets limits on the total amount of interruptible power it plans to avail itself of, based on system management requirements. If the amount offered by the customers exceeds its requirements for a given period, Hydro-Québec may reduce the quantity made available by each one in proportion to its requirements.

Subsection 2.2 – Conditions of Application and Credits

Commitment 6.18

The interruptible power per contract must not be less than 10 kilowatts and must not, under any circumstances, exceed the maximum contract power (for Rate L customers) or the available power (for Rate LG customers) during the last 12 consumption

periods ending at the end of the consumption period that precedes October 1. The contractual commitment remains in effect for the entire winter period.

As of April 1, 2026, the conditions applicable to Rate LG contracts will also apply to Rate G and Rate M contracts.

Customers cannot change their chosen sub-option during the winter period, i.e., they cannot modify their choices regarding the maximum duration of peak demand events per winter period, the maximum number of peak demand events per day or the days of the week included (Monday to Friday or Monday to Sunday).

Customers who sign up for any of the sub-options described in Article 6.19 may do so for more than one winter period, up to a maximum of three consecutive winter periods. They will then be entitled to receive the multi-year commitment credit described in subparagraph 6.22 c).

Customers cannot change their chosen sub-option during a multi-year commitment.

Conditions applicable to peak demand events **6.19**

Peak demand events can occur at any time in the winter period during weekdays or during both weekdays and weekends, depending on the sub-option chosen by the customer. The interruptions carried out during these events in accordance with this section must meet the following conditions:

	Sub-options	
	I	II
Maximum number of events per day:	1	1
Minimum interval between 2 events (hours):	12	12
Weekends:	No	Yes
Maximum number of events per winter period:	5	5
Duration of each event (hours):	4-5	4-5
Planned maximum duration of events per winter period (hours):	20	20

	Sub-options	
	III	IV
Maximum number of events per day:	2	2
Minimum interval between 2 events (hours):	4	4
Weekends:	No	Yes
Maximum number of events per winter period:	5	5
Duration of each event (hours):	4-5	4-5
Planned maximum duration of events per winter period (hours):	20	20

	Sub-options	
	V	VI
Maximum number of events per day:	1	1
Minimum interval between 2 events (hours):	12	12
Weekends:	No	Yes
Maximum number of events per winter period:	10	10
Duration of each event (hours):	4-5	4-5
Planned maximum duration of events per winter period (hours):	40	40

	Sub-options	
	VII	VIII
Maximum number of events per day:	2	2
Minimum interval between 2 events (hours):	4	4
Weekends:	No	Yes
Maximum number of events per winter period:	10	10
Duration of each event (hours):	4-5	4-5
Planned maximum duration of events per winter period (hours):	40	40

	Sub-options	
	IX	X
Maximum number of events per day:	1	1
Minimum interval between 2 events (hours):	12	12
Weekends:	No	Yes
Maximum number of events per winter period:	15	15
Duration of each event (hours):	4-5	4-5
Planned maximum duration of events per winter period (hours):	60	60

	Sub-options	
	XI	XII
Maximum number of events per day:	2	2
Minimum interval between 2 events (hours):	4	4
Weekends:	No	Yes
Maximum number of events per winter period:	15	15
Duration of each event (hours):	4-5	4-5
Planned maximum duration of events per winter period (hours):	60	60

	Sub-options	
	XIII	XIV
Maximum number of events per day:	1	1
Minimum interval between 2 events (hours):	12	12
Weekends:	No	Yes
Maximum number of events per winter period:	20	20
Duration of each event (hours):	4-5	4-5
Planned maximum duration of events per winter period (hours):	80	80

	Sub-options	
	XV	XVI
Maximum number of events per day:	2	2
Minimum interval between 2 events (hours):	4	4
Weekends:	No	Yes
Maximum number of events per winter period:	20	20
Duration of each event (hours):	4-5	4-5
Planned maximum duration of events per winter period (hours):	80	80

	Sub-options	
	XVII	XVIII
Maximum number of events per day:	1	1
Minimum interval between 2 events (hours):	12	12
Weekends:	No	Yes
Maximum number of events per winter period:	25	25
Duration of each event (hours):	4-5	4-5
Planned maximum duration of events per winter period (hours):	100	100

	Sub-options	
	XIX	XX
Maximum number of events per day:	2	2
Minimum interval between 2 events (hours):	4	4
Weekends:	No	Yes
Maximum number of events per winter period:	25	25
Duration of each event (hours):	4-5	4-5
Planned maximum duration of events per winter period (hours):	100	100

If the planned maximum duration of peak demand events per winter period has not been reached, Hydro-Québec reserves the right to exceed it by a maximum of 4 hours per winter period to complete a peak demand event.

Hydro-Québec reserves the right to provide customers with a shorter notice in exceptional circumstances. In such a case, the notice is a minimum of 2 hours prior to the peak event, and customers are entitled to receive the credit for shorter notice described in subparagraph 6.22 d).

Peak demand event notifications

6.20

Hydro-Québec notifies the representative(s) designated by the customer of the date, start time and end time of each peak demand event by telephone, email or any other means agreed upon with the customer.

Peak demand event notifications will be transmitted as follows:

- No later than 15:00 on the business day preceding a peak demand event scheduled for before 16:00;
- No later than noon of the same day for a peak demand event scheduled for 16:00 or later;
- No later than 15:00 on the business day preceding 2 peak demand events scheduled for the same day.

To check the proper transmission of peak demand event notifications, Hydro-Québec will send 2 test notifications to the contacts provided by the customer (via email, telephone or any other means agreed upon with the customer), on the first and third Tuesdays in November. For these tests, no demand reduction measures have to be implemented, and no credit will be granted.

Hydro-Québec cannot be held responsible for non-receipt of a peak demand event notification due to an error in the email address, telephone number or other contact information provided by the customer, or due to technical problems experienced by the customer or their telecommunications provider.

Nominal credits**6.21**

The following credits apply for the winter period:

Sub-option I

Fixed credit:

\$50.000 per kilowatt of effective interruptible power.

Variable credit:

5.000¢ per kilowatthour of effective hourly interruptible power for each peak demand event hour

Sub-option II

Fixed credit:

\$52.000 per kilowatt of effective interruptible power.

Variable credit:

5.000¢ per kilowatthour of effective hourly interruptible power for each peak demand event hour.

Sub-option III

Fixed credit:

\$50.000 per kilowatt of effective interruptible power.

Variable credit:

35.000¢ per kilowatthour of effective hourly interruptible power for each peak demand event hour.

Sub-option IV

Fixed credit:

\$52.000 per kilowatt of effective interruptible power.

Variable credit:

35.000¢ per kilowatthour of effective hourly interruptible power for each peak demand event hour.

Sub-option V

Fixed credit:

\$65.000 per kilowatt of effective interruptible power.

Variable credit:

5.000¢ per kilowatthour of effective hourly interruptible power for each peak demand event hour.

Sub-option VI

Fixed credit:

\$67.000 per kilowatt of effective interruptible power.

Variable credit:

5.000¢ per kilowatthour of effective hourly interruptible power for each peak demand event hour.

Sub-option VII

Fixed credit:

\$65.000 per kilowatt of effective interruptible power.

Variable credit:

35.000¢ per kilowatthour of effective hourly interruptible power for each peak demand event hour.

Sub-option VIII

Fixed credit:

\$67.000 per kilowatt of effective interruptible power.

Variable credit:

35.000¢ per kilowatthour of effective hourly interruptible power for each peak demand event hour.

Sub-option IX

Fixed credit:

\$67.000 per kilowatt of effective interruptible power.

Variable credit:

5.000¢ per kilowatthour of effective hourly interruptible power for each peak demand event hour.

Sub-option X

Fixed credit:

\$69.000 per kilowatt of effective interruptible power.

Variable credit:

5.000¢ per kilowatthour of effective hourly interruptible power for each peak demand event hour.

Sub-option XI

Fixed credit:

\$67.000 per kilowatt of effective interruptible power.

Variable credit:

35.000¢ per kilowatthour of effective hourly interruptible power for each peak demand event hour.

Sub-option XII

Fixed credit:

\$69.000 per kilowatt of effective interruptible power.

Variable credit:

35.000¢ per kilowatthour of effective hourly interruptible power for each peak demand event hour.

Sub-option XIII

Fixed credit:

\$69.000 per kilowatt of effective interruptible power.

Variable credit:

5.000¢ per kilowatthour of effective hourly interruptible power for each peak demand event hour.

Sub-option XIV

Fixed credit:

\$71.000 per kilowatt of effective interruptible power.

Variable credit:

5.000¢ per kilowatthour of effective hourly interruptible power for each peak demand event hour.

Sub-option XV

Fixed credit:

\$69.000 per kilowatt of effective interruptible power.

Variable credit:

35.000¢ per kilowatthour of effective hourly interruptible power for each peak demand event hour.

Sub-option XVI

Fixed credit:

\$71.000 per kilowatt of effective interruptible power.

Variable credit:

35.000¢ per kilowatthour of effective hourly interruptible power for each peak demand event hour.

Sub-option XVII

Fixed credit:

\$71.000 per kilowatt of effective interruptible power.

Variable credit:

5.000¢ per kilowatthour of effective hourly interruptible power for each peak demand event hour.

Sub-option XVIII

Fixed credit:

\$73.000 per kilowatt of effective interruptible power.

Variable credit:

5.000¢ per kilowatthour of effective hourly interruptible power for each peak demand event hour.

Sub-option XIX

Fixed credit:

\$71.000 per kilowatt of effective interruptible power.

Variable credit:

35.000¢ per kilowatthour of effective hourly interruptible power for each peak demand event hour.

Sub-option XX

Fixed credit:

\$73.000 per kilowatt of effective interruptible power.

Variable credit:

35.000¢ per kilowatthour of effective hourly interruptible power for each peak demand event hour.

The effective credits are applied to the bill for the consumption period in question according to the following conditions:

a) Effective fixed credit:

The effective fixed credit to which the customer is entitled for a given consumption period equals the product of the fixed credit for the winter period and the effective interruptible power for the consumption period in question, prorated to the number of hours in the consumption period in relation to the number of hours in the winter period.

b) Effective variable credit:

The effective variable credit to which the customer is entitled for a given consumption period equals the product of the variable credit and the number of kilowatthours of effective hourly interruptible power for each peak demand event hour.

c) Multi-year commitment credit based on the duration of the customer's commitment, paid every consumption period and calculated as follows:

- i. Commitment for two consecutive winter periods:
5% multiplied by the effective fixed credit calculated according to subparagraph a);
- ii. Commitment for three consecutive winter periods:
10% multiplied by the effective fixed credit calculated according to subparagraph a).

In addition to the deductions provided for in Article 6.25, if a customer decides to terminate their multi-year commitment, Hydro-Québec deducts an amount equal to 50% of the credits calculated according to subparagraph a) for the year of termination, multiplied by the number of years remaining in the commitment.

Moreover, Hydro-Québec reserves the right to terminate the multi-year commitment of a customer who does not provide the interruptible power to which they committed.

Hydro-Québec also reserves the right to cancel the multi-year commitment credit after any winter period.

- d) Credit for shorter notice than the one provided for in Article 6.20, paid after each relevant consumption period and calculated as follows:

70.000¢ per kilowatt-hour of effective hourly interruptible power for each peak demand event hour.

If the customer who received a notice shorter than the one provided for in Article 6.20 does not provide the interruptible power to which they committed, Hydro-Québec applies the deductions described in Article 6.25.

In addition, Hydro-Québec may decide that the customer is no longer eligible for the DR Commitment Option.

Hydro-Québec also reserves the right to cancel the credit for shorter notice after any winter period.

Calculation of contribution coefficient 6.23

The contribution coefficient for a consumption period is calculated as follows:

$$C = \frac{(P_{\max} - P_{\text{base}})}{I}$$

where

C = the contribution coefficient;

P_{\max} = the maximum power;

P_{base} = the base power;

I = the interruptible power.

The contribution coefficient cannot be negative.

Recovery periods 6.24

A Rate L customer is entitled to recovery periods if one or more peak demand events have occurred in the winter period. These recovery periods may take place:

- a) between 22:00 and 06:00 from Monday to Thursday; or
- b) between 22:00 Friday and 06:00 Monday.

The consumption during the recovery period is that which exceeds, for the consumption period in question, the contract power in effect or the maximum power demand recorded outside recovery periods during the consumption period in question, whichever is higher.

Consumption during recovery periods is billed at the price of energy at Rate L, up to the number of kilowatthours of effective hourly interruptible power to which the variable credit was applied. Any additional consumption is billed at the price of additional electricity in effect for the consumption period in question, as set out in Article 6.52.

Hydro-Québec may prohibit consumption during a recovery period, based on system management requirements and availability.

The customer's right to recovery periods must in no case be interpreted as a limitation of Hydro-Québec's right to ask the customer to interrupt their consumption under the conditions of this section.

Deductions

6.25

For any overrun during a peak demand event, Hydro-Québec will deduct the following amounts from the fixed credit:

- a) Fixed credit:
 - i. a deduction of \$1.510 for each kilowatt included in the sum of overruns during the first peak demand event that is not complied with;
 - ii. a deduction of \$4.310 for each kilowatt included in the sum of overruns during any subsequent peak demand event that is not complied with.

The maximum deduction for the first peak demand event that is not complied with cannot exceed the product of the interruptible power, the contribution coefficient for the consumption period in question and \$6.050 per kilowatt.

The maximum deduction for each subsequent peak demand event not complied with cannot exceed the product of the interruptible power, the contribution coefficient for the consumption period in question and \$17.240 per kilowatt.

b) Variable credit:

No variable credit is granted for an hour to which a deduction applies in accordance with this article.

The total deductions applied over a winter period cannot exceed 150% of the total fixed credits that would have been paid to the customer for the winter period.

Hydro-Québec may terminate the commitment of a customer who has drawn an overrun during 4 or more peak demand events in the course of the winter period. In the case of a commitment terminated before the end of the winter period, Hydro-Québec will calculate the contribution coefficient for the winter period based on the consumption profile recorded between December 1 and the day preceding the termination date.

Billing conditions for Rate L customers benefiting simultaneously from the DR Commitment Option and the Additional Electricity Option 6.26

For Rate L customers benefiting simultaneously from the DR Commitment Option and the Additional Electricity Option, the conditions described in Article 6.57 apply.

Subsection 2.3 – Additional Interruptible Load Trial

Definitions 6.27

In this subsection, the following terms, which are in addition to those defined in Article 6.14, are defined as follows:

additional commitment: The real power corresponding to the additional interruptible load being tested that the customer agrees not to use during peak demand events.

additional interruptible load: An electrical load not covered under the DR Commitment Option, the Additional Electricity Option for large-power customers or the Industrial Revitalization Rate for Rate L customers, respectively described in sections 2, 4 and 6 of this chapter, during a winter period preceding April 1, 2025.

additional interruptible load trial: Testing of the conditions described in this subsection by a customer who wishes to interrupt a new electrical load and whose

maximum power demand during the 12 months preceding October 1, 2025, was at least 1,000 kilowatts.

base power of the additional commitment:

The difference between:

- a) the contract power or the maximum power in the consumption period in question, whichever is higher, and
- b) the total interruptible power.

overrun of the additional commitment: The difference, for each 15-minute integration period, between:

- a) the real power demand, and
- b) the sum of the base power of the additional commitment and 5% of the total interruptible power.

reference commitment: The average, in kilowatts, of the loads interrupted by the customer under the DR Commitment Option, based on their consumption profile.

sub-option of the DR Commitment Option: One of the 20 choices offered to the customer under Article 6.19.

total interruptible power: The sum of the reference commitment and the additional commitment.

Sign-up date

6.28

The customer must submit a request to Hydro-Québec in writing or by any other means agreed upon between the two parties before September 30, 2025, indicating the additional interruptible load they wish to commit to and the sub-option of the DR Commitment Option selected among those described in Article 6.19.

Hydro-Québec then has 30 days to analyze the customer's request, in particular the risk related to the customer's commitment, the reliability of their additional equipment and the anticipated system impact of the power being offered, given any potential constraints associated with the customer's location. Hydro-Québec notifies the customer in writing of its decision to accept or deny the request. If the request is accepted, the agreement comes into effect December 1, 2025.

Eligibility**6.29**

To be eligible for the conditions described in this subsection, the customer's load factor must be higher than 60%.

If the 12 consumption periods preceding the sign-up request for these conditions do not reflect the customer's normal consumption profile, Hydro-Québec reserves the right to use another reference period or any other calculation method it deems more appropriate to decide whether the customer is eligible for this option.

Limitation**6.30**

Hydro-Québec sets limits on the total amount of interruptible power it plans to avail itself of, based on system management requirements. If the amount offered by the customers exceeds its requirements for a given period, Hydro-Québec may reduce the quantity made available by each one in proportion to its requirements.

The sub-option of the DR Commitment Option that the customer has selected for their reference commitment under Article 6.19 shall also apply to the additional commitment undertaken under this subsection.

Commitment**6.31**

The additional interruptible load must be at least 500 kilowatts and must not, under any circumstances, exceed the number of kilowatts chosen by the customer under one of the sub-options of the DR Commitment Option described in Article 6.19. This number must be at least equal to the average of the loads interrupted under the DR Commitment Option established on the basis of the customer's consumption profile. In the case of a customer who does not have a reference commitment, the number of kilowatts chosen under one of the sub-options of the DR Commitment Option must be at least 500 kilowatts and greater than the additional interruptible load. The additional commitment undertaken for the additional interruptible load remains in effect for the entire winter period.

Should a customer fail to comply with any of the conditions in this subsection, Hydro-Québec may cease to apply the conditions for the trial of an additional interruptible load to their contract.

Hydro-Québec also reserves the right to terminate the application of the conditions for the trial of an additional interruptible load after any winter period.

Conditions applicable to peak demand events 6.32

The interruptions carried out by the customer during peak demand events in accordance with this subsection must meet the same conditions as those applicable in the sub-option of the DR Commitment Option selected by the customer among the options described in Article 6.19.

Peak demand event notifications 6.33

Hydro-Québec will notify the representative(s) designated by the customer, by telephone, email or any other means agreed upon with the customer, of the start and end date and time of any peak demand event.

In the event that no peak demand event notifications are sent during a winter period, no credit will be given for the additional interruptible load.

Nominal credits 6.34

The credits applicable to the additional interruptible load are the same as those described in Article 6.21 for the sub-option selected.

Effective credits applicable to the contract 6.35

The effective credits for the additional interruptible load are applied according to the conditions described in Article 6.21.

To receive the credits at the end of the winter period, the customer must participate in at least one peak demand event during which they do not overrun their additional commitment.

Deductions 6.36

The deductions related to the fixed credit described in Article 6.25 do not apply to the additional interruptible load.

SECTION 3

DEMAND RESPONSE – LEEWAY OPTION (INTERIM RATE)

Application 6.37

The Demand Response – Leeway Option (DR Leeway Option) described in this section will apply as of April 1, 2026, to the Rate DM, Rate DP, Rate G, Rate H, Rate M, Rate G9 or Rate LG contract of a customer capable of reducing their power demand during the winter period at Hydro-Québec’s request. It will also apply, as of the same date, to the Rate L contract of a customer capable of doing the same and whose power demand during the 12 consumption periods preceding the sign-up date is lower than 50,000 kilowatts.

However, no customer will be allowed to benefit simultaneously from this option and from the Demand Response – Commitment Option described in Section 2 of this chapter.

Customers can sign up starting April 1, 2026.

Customers enrolled in the Demand Response Option described in Section 9 of this chapter on April 1, 2026, will automatically be enrolled in the DR Leeway Option as of that date, with a planned maximum interruption duration of 40 hours (Sub-option II hereafter). They can then select another sub-option by modifying the information in their Customer Space no later than September 30, 2026.

Definitions 6.38

In this section, the following definitions apply:

average temperature: The value in degrees Celsius of the average of the temperatures recorded at the weather station closest to the delivery point during peak hours.

peak demand event: The sequence of peak hours during the weekdays or weekend days indicated by Hydro-Québec in the peak demand event notification sent to the customer in accordance with Article 6.43.

real power demand during the peak demand event: The value in kilowatts of the service contract’s average real power demands during the peak demand event.

reference period: Depending on whether the peak demand event occurs in the morning or evening, the peak period between 06:00 and 09:00 or between 16:00 and 20:00 during which there was no peak demand event.

weekday: Monday, Tuesday, Wednesday, Thursday or Friday.

weekday effective interruptible power: The value in kilowatts of the average power reductions during all the peak demand events that occurred on weekdays. The weekday effective interruptible power is calculated after the winter period.

weekday peak hours: All hours from 06:00 to 09:00 and from 16:00 to 20:00 during the winter period, excluding:

- a) Saturdays and Sundays;
- b) December 24, 25, 26 and 31, January 1 and 2, as well as Good Friday and Easter Monday when the latter fall within the winter period.

weekday power reduction: The value in kilowatts of the difference between the reference power and the real power during a peak demand event that occurs on a weekday. This value cannot be negative.

weekday reference power: A value in kilowatts estimated from linear regressions of the service contract's average real power demand based on the customer's normal consumption profile on weekdays and of the average temperature during the reference period. Hydro-Québec may adjust the weekday reference power as needed to better reflect the customer's normal consumption profile.

weekend day: Saturday or Sunday.

weekend peak hours: All hours from 06:00 to 09:00 and from 16:00 to 20:00 during the winter period, excluding:

- a) weekdays;
- b) December 24, 25, 26 and 31, January 1 and 2, as well as Good Friday and Easter Monday when the latter fall within the winter period.

weekend power reduction: The value in kilowatts of the difference between the reference power and the real power during a peak demand event that occurs on a weekend. This value cannot be negative.

weekend reference power: A value in kilowatts estimated from linear regressions of the service contract's average real power demand based on the customer's normal consumption profile on weekends and of the average temperature during the reference period. Hydro-Québec may adjust the weekend reference power as needed to better reflect the customer's normal consumption profile.

Sign-up procedure

6.39

To sign up for this option, the customer must provide the information required in their Customer Space by September 30 at the latest. The information must include the maximum interruption duration, in hours, for which the customer undertakes to interrupt their consumption per winter period when weekday peak demand events (sub-options I, II, III, IV or V), and, if applicable, weekend peak demand events (sub-option WE) are called. After analysis, Hydro-Québec may ask the customer to make changes to the information provided.

Customers who were enrolled in the Demand Response Option prior to April 1, 2026, will automatically be transferred to the DR Leeway Option, with a planned maximum interruption duration of 40 hours. They can select another duration by modifying the information in their Customer Space no later than September 30, 2026.

Hydro-Québec notifies the customer in writing of its decision to accept or deny the sign-up request. The customer then confirms their sign-up from their Customer Space, specifying the planned maximum duration of peak demand events per winter period.

If, exceptionally, the customer wishes to sign up for this option during the winter period, Hydro-Québec deducts the following amounts from the credit applicable to each peak demand event during the winter period:

- Sign-up between December 1 and December 31: 25% of the credits the customer is entitled to receiving for each consumption period during the winter period.

- Sign-up between January 1 and January 31: 50% of the credits the customer is entitled to receiving for each consumption period during the winter period.
- Sign-up between February 1 and February 28 or 29: 75% of the credits the customer is entitled to receiving for each consumption period during the winter period.
- Sign-up between March 1 and March 31: 100% of the credits the customer is entitled to receiving for each consumption period during the winter period.

Eligibility**6.40**

For the contract to be eligible for this option, the following conditions must be met:

- a) The metering of electricity must be done by a communicating meter installed by Hydro-Québec. However, this provision may not be interpreted as an obligation on the part of Hydro-Québec to install a communicating meter for a customer who does not have one. In addition, Hydro-Québec reserves the right to terminate a customer's enrollment in this option if it encounters recurring problems in gathering hourly metering data;
- b) The customer must not be served by an off-grid system or a municipal system;
- c) The customer must not, for the same service contract, be benefiting from the rates, options or conditions described in sections 1, 3 and 4 of Chapter 3 (Rate G, Winter Credit Option and Rate Flex G), sections 3, 5, 7 and 8 of Chapter 4 (Rate GD, Rate BR, Rate Flex M and Rate Flex G9) and sections 2, 7 and 8 of this chapter (Demand Response - Commitment Option, running in or testing of equipment), nor from Rate CB described in Chapter 7.

Limitation**6.41**

Hydro-Québec reserves the right to limit the total amount of power it intends to avail itself of under this option, depending on its system management needs. If the power available exceeds its needs for a given period, it may restrict the number of new sign-up requests it accepts on a first-come, first-served basis.

Customers cannot change their sub-option during the winter period.

Hydro-Québec reserves the right to limit eligibility for the DR Leeway Option to customers whose effective interruptible power exceeded 10 kilowatts during two consecutive winter periods while they were enrolled in this option.

Hydro-Québec also reserves the right to limit eligibility for the DR Leeway Option to customers who participated in more than half of peak demand events during two consecutive winter periods while they were enrolled in this option.

Conditions applicable to peak demand events 6.42

Peak demand events can take place anytime during weekday or weekend peak hours, based on the sub-option selected by the customer. Interruptions carried out during these events must meet the following conditions:

Maximum number of events per day: 2

Minimum interval between 2 events (hours): 7

Duration of each event (hours): 3-4

Planned maximum duration of events per winter period (hours):

Sub-option I: 20

Sub-option II: 40

Sub-option III: 60

Sub-option IV: 80

Sub-option V: 100

Sub-option WE: 100

If the planned maximum duration of peak demand events per winter period has not been reached, Hydro-Québec reserves the right to exceed it by a maximum of 3 hours per winter period to complete a peak demand event.

Peak demand event notifications 6.43

Hydro-Québec will notify the representative(s) designated by the customer, by telephone, email or any other means agreed upon with the customer, of the start and end date and time of the peak demand event.

Peak demand event notifications will be transmitted as follows:

- No later than 15:00 on the business day preceding a peak demand event scheduled from 06:00 to 9:00;
- No later than noon of the same day for a peak demand event scheduled from 16:00 to 20:00;
- No later than 15:00 on the business day preceding 2 peak demand events scheduled from 6:00 to 9:00 and from 16:00 to 20:00 on the same day.

To check the proper transmission of peak demand event notifications, Hydro-Québec will send 2 test notifications to the email addresses provided by the customer, on the first and third Tuesdays in November. For these tests, no demand reduction measures have to be implemented, and no credit will be granted.

Hydro-Québec cannot be held responsible for non-receipt of a peak demand event notification due to an erroneous email address provided by the customer or technical problems experienced by the customer or their telecommunications provider.

Credit

6.44

The credit applicable for the winter period is as follows:

- Sub-option I: \$43 per kilowatt of weekday effective interruptible power.
- Sub-option II: \$72 per kilowatt of weekday effective interruptible power.
- Sub-option III: \$82 per kilowatt of weekday effective interruptible power.
- Sub-option IV: \$89 per kilowatt of weekday effective interruptible power.
- Sub-option V: \$96 per kilowatt of weekday effective interruptible power.
- Sub-option WE: \$1.810 per kilowatt of power reduction on the weekend for a 3-hour interruption and \$2.420 per kilowatt of power reduction on the weekend for a 4-hour interruption.

No credit is granted if the weekday effective interruptible power is less than 10 kilowatts.

If Hydro-Québec does not send any peak demand event notifications for weekday interruptions in accordance with Article 6.43 during the winter period, it will pay the customer a credit equal to the lesser of the following values:

- 15% of the contract's maximum power demand for the winter period multiplied by \$72.141 per kilowatt,
- or
- \$21,860.800.

If no power demand reduction is noted during more than half the peak demand events called on weekdays in a given winter period while the service contract is active, Hydro-Québec reserves the right not to grant any credit to the customer.

The amount of the credit will be confirmed to the customer by the third billing cycle following the winter period in which the events took place.

The customer will have access to a report titled *Details of the credit applied to the bill* through their Customer Space.

Hydro-Québec may deduct from the credit any amount owed to it by the customer.

Termination

6.45

If a Rate DM, Rate DP, Rate G, Rate M or Rate G9 customer wishes to terminate this option, they must inform Hydro-Québec either through their Customer Space, by mail or by calling customer services. Rate H, Rate L and Rate LG customers must contact their account representative.

The option ceases to apply the day after Hydro-Québec is notified of the customer's decision, and no credit is granted.

This article does not, however, apply if the customer terminates the service contract during the winter period.

SECTION 4

ADDITIONAL ELECTRICITY OPTION FOR MEDIUM-OR LARGE-POWER CUSTOMERS (INTERIM RATE)

Subsection 4.1 – General Provisions

Application 6.46

The Additional Electricity Option described in this section applies to a Rate M or Rate G9 contract with a maximum power demand of at least 500 kilowatts during a consumption period included in the 12 consecutive monthly periods preceding the date of the sign-up request, subject to the conditions specified in articles 6.48, 6.52 and 6.55.

This option also applies to a Rate L or Rate LG contract whose holder is not benefiting from the running-in conditions for new equipment described in Article 6.88 of this chapter.

It does not apply to a contract at Rate Flex M or Rate Flex G9, which are respectively described in sections 7 and 8 of Chapter 4.

Definitions 6.47

In this section, the following definitions apply:

additional electricity: The amount of energy corresponding to the difference between the real power demand and the reference power, for each 15-minute integration period. This quantity cannot be negative.

reference period: The 3 consecutive consumption periods preceding the customer's sign-up for the Additional Electricity Option.

reference power: The average of the highest real power demands during the 3 consumption periods making up the reference period, weighted according to the number of hours. If the real power demand is less than the minimum billing demand, it is replaced by the contract power in the case of a Rate L customer or by the minimum billing demand in the case of a Rate M, Rate G9 or Rate LG customer. Hydro-Québec may adjust the reference power if needed to better reflect the customer's normal consumption profile.

unauthorized period: A period during which the customer's reference power may not be exceeded.

Sign-up procedure **6.48**

A customer wishing to sign up for the Additional Electricity Option must submit a request to Hydro-Québec in writing at least 10 business days before the start of the target consumption period.

Subject to installation of the appropriate metering equipment, agreement on the reference power and Hydro-Québec's written approval, the option takes effect at the beginning of the consumption period following the period during which Hydro-Québec receives the written request.

Duration of commitment **6.49**

A customer must make a commitment to the Additional Electricity Option for 1 consumption period.

Renewal of commitment **6.50**

A customer may renew a commitment regarding the Additional Electricity Option by submitting a request to Hydro-Québec in writing no later than 5 business days before the end of the commitment. The option will then continue to apply to the same contract, subject to Hydro-Québec's approval.

Subsection 4.2 – Conditions of Application

Establishing reference power **6.51**

Upon receiving a request for the Additional Electricity Option, Hydro-Québec establishes the reference power that will be in effect for the duration of the commitment. If the 3 periods preceding the request do not reflect the customer's normal consumption profile, Hydro-Québec will use another reference period or any other calculation method it deems more appropriate.

Determining the price of electricity **6.52**

The price of electricity supplied under the Additional Electricity Option corresponds to:

- a) During the winter period, the result of the following formula:

$$\frac{HAP_h \times CEE_h + (H_h - HAP_h) \times CEP}{H_h}$$

where

HAP_h = the number of hours for which Hydro-Québec plans to make short-term purchases on the markets during the winter period;

CEE_h = Hydro-Québec's avoided energy cost for the winter period;

CEP = the average cost of heritage pool electricity in effect;

H_h = the total number of hours in the winter period;

or

- b) During the summer period, the average cost of heritage pool electricity in effect.

For a Rate M or Rate G9 contract, the price of additional electricity set according to Article 6.52 cannot be lower than the average price at Rate M, based only on the second-tier energy price for 25-kV service and a 100% load factor, i.e., 6.755¢ per kilowatthour.

For a Rate LG contract, the price of additional electricity cannot be lower than the average price at Rate L for 120-kV service and a 100% load factor, i.e., 5.246¢ per kilowatthour.

Notification of the price of electricity

6.53

Hydro-Québec shall notify the customer of the price of electricity supplied under the Additional Electricity Option 7 business days before the beginning of each calendar month. This price shall remain fixed for the entire monthly period.

For the duration of the commitment to the Additional Electricity Option, the customer's bill for the consumption period in question is established as follows:

- a) An initial amount is calculated by applying the prices and conditions in effect for Rate M, Rate G9, Rate L or Rate LG, as the case may be, to the reference power, taking into account, if applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4;
- b) A second amount is calculated by multiplying the difference between actual consumption and the additional electricity for the consumption period by the price of energy at Rate M, Rate G9, Rate L or Rate LG;
- c) A third amount is calculated by multiplying the additional electricity for the consumption period by the price determined in accordance with Article 6.52;
- d) The results obtained in subparagraphs a), b) and c), as well as any amount related to the power factor applicable under Article 6.55, are added up.

When a consumption period overlaps 2 monthly periods, the amount billed for additional electricity will be prorated to the number of hours of the consumption period falling in each monthly period.

Conditions related to the power factor

For a Rate M or Rate G9 contract, an adjustment for the difference in power factor is applied if the power factor for the actual consumption or the reference power, or for both, is lower than 90%.

For a Rate L or Rate LG contract, if, during a given consumption period, the maximum power demand exceeds the highest real power demand, Hydro-Québec applies the demand charge in effect for Rate L or Rate LG, as the case may be, to the difference between those two values.

Restrictions**6.56**

Hydro-Québec may prohibit consumption of additional electricity on 2 hours' notice, based on system management requirements and availability.

Should the customer consume additional electricity during an unauthorized period, all consumption beyond reference power during that period will be billed at \$1.000 per kilowatthour.

If Hydro-Québec notes that this situation has occurred 3 times or more during the last 12 consecutive monthly periods, it reserves the right to terminate the customer's enrollment in this option, except if the additional electricity is used for photosynthetic lighting or space heating to raise crops.

The provisions of the Additional Electricity Option shall not be interpreted as an obligation on the part of Hydro-Québec to assume any additional costs for connection, equipment installation or reinforcement of the transmission or distribution system to serve a customer wishing to take advantage of the option. The customer shall assume any and all costs associated with the delivery of electricity under the Additional Electricity Option.

Hydro-Québec will neither build facilities to provide the Additional Electricity Option nor allocate existing facilities to additional electricity loads in order to guarantee the availability of the energy.

This article shall not be interpreted as granting the customer permission to exceed their available power.

**Conditions for Rate M (as of April 1, 2026),
Rate L or Rate LG customers benefiting
simultaneously from the Additional Electricity
Option and the DR Commitment Option****6.57**

For Rate M (as of April 1, 2026), Rate L or Rate LG customers benefiting simultaneously from the Additional Electricity Option and the DR Commitment Option, the conditions described in this section and in Section 2 of this chapter shall apply, with the following adjustments:

a) The customer's base power is the difference between:

i. the contract power or the reference power for the consumption period in question, whichever is higher, and

i. the interruptible power.

Base power cannot be negative;

- b) The customer's maximum power demand is the reference power for the consumption period in question;
- c) The customer's average maximum daily power is the reference power for the consumption period in question;
- d) For Rate L customers, consumption during recovery periods under the conditions set forth in Article 6.24 shall not be considered in the calculation of the additional electricity.

Conditions related to photosynthetic lighting or space heating to raise crops 6.58

If the electricity delivered under a Rate D, Rate DP, Rate DM, Rate G, Rate M, Rate G9 or Rate LG contract is used for photosynthetic lighting or space heating to raise crops, the maximum power demand must have been at least 50 kilowatts during a consumption period included in the 12 consecutive monthly periods preceding the date of the sign-up request.

Upon receiving a sign-up request for the Additional Electricity Option for photosynthetic lighting or space heating to raise crops, Hydro-Québec may base the reference power on the customer's normal consumption profile excluding these two uses.

These conditions do not apply when the customer is benefiting from:

- the Winter Credit Option for Rate D customers described in Section 8 of Chapter 2;
- the Winter Credit Option for Rate G customers described in Section 3 of Chapter 3;
- Rate Flex M or Rate Flex G9, as the case may be, respectively described in sections 7 and 8 of Chapter 4.

They also do not apply when the customer is benefiting from the DR Commitment Option described in Section 2 of this chapter.

Determining the price of electricity **6.59**

If the electricity delivered is used for photosynthetic lighting or space heating to raise crops, the conditions applicable to the Additional Electricity Option for medium- or large-power customers described in Article 6.52 of this section shall apply, with the following adjustments:

- a) For a Rate D, Rate DM, Rate DP, Rate G, Rate G9 or Rate M contract, the price of additional electricity set according to Article 6.52 cannot be lower than the average price of Rate M, based only on the second-tier energy price for 25-kV service and a 100% load factor;
- b) For a Rate LG contract, the price of additional electricity set according to Article 6.52 cannot be lower than the average price at Rate L for 120-kV service and a 100% load factor;
- c) Rates L and LG mentioned in articles 6.52, 6.54 and 6.55 are replaced with Rate DP, Rate G, Rate G9 or Rate M, as the case may be;
- d) The adjustment for the difference in power factor provided for in Article 6.55 is made if the power factor for the actual consumption or the reference power, or for both, is lower than 90%.

SECTION 5

ECONOMIC DEVELOPMENT RATE FOR MEDIUM- AND LARGE-POWER CUSTOMERS

Subsection 5.1 – Hydro-Québec Customers

Application **6.60**

The Economic Development Rate described in this section is reserved for the medium- or large-power contract of a customer who was eligible for it on September 20, 2023, and who undertakes, as a result of this rate, to build and commission a new facility or expand an existing facility operating in a promising sector of activity.

It does not apply to a Rate L customer who is benefiting from the Load Retention Rate described in Section 1 of this chapter, nor to the Rate M or Rate G9 contract of a customer who is benefiting from the Industrial Revitalization Rate described in Section 4 of Chapter 4 or from the option or conditions described in sections 4, 7 and 8 of this chapter (Additional Electricity Option, running in or testing of equipment).

As of April 1, 2026, it also will not apply to the Rate M or Rate G9 contract of a customer who is benefiting from the DR Commitment Option described in Section 2 of this chapter.

Definitions

6.61

In this section, the following definitions apply:

historical demand: The average of the billing demands during the historical period, weighted according to the number of hours. Hydro-Québec may adjust the historical demand as needed to better reflect the customer's normal consumption profile.

historical energy: The average hourly energy consumption during the historical period.

historical period: The 3 consumption periods with the highest energy consumption among the 12 consecutive consumption periods preceding the sign-up date. If these 3 consumption periods do not reflect the customer's normal consumption profile, Hydro-Québec may consider the historical period to be any other time range it deems more appropriate or use other criteria to determine the customer's normal consumption profile.

operating expenses: All expenses directly related to operating the customer's facilities, including, but not limited to, the cost of raw materials, labour and energy as well as overhead and administrative expenses, but excluding all expenses that are not directly related to operations, such as depreciation and amortization and financing costs.

transition period: The last 3 years of the commitment, during which the rate reduction progressively diminishes until the contract is subject to Rate L or the applicable general rate, as the case may be.

Eligibility**6.62**

For the contract to be eligible for the Economic Development Rate, the following conditions must be met:

- a) The customer must undertake to build and commission a new facility with a power demand of at least 1,000 kilowatts or to add at least 500 kilowatts of demand to an existing facility;
- b) In the case of an existing facility, the expected maximum power demand of the new equipment must not be less than 10% of the highest billing demand during the 12 consumption periods preceding the sign-up date;
- c) The facility's electricity costs must represent at least 10% of operating expenses. In the case of a data hosting facility, it must also present a significant value added for the Québec economy;
- d) The facility must have significant potential for the net addition of new loads within Québec. Consequently, the new load must not be the result of production transfers between the entities or facilities of the same company or of different companies within Québec, and it must not be linked to equipment that was in operation during the year preceding the effective date of this rate.

Sign-up procedure**6.63**

A customer wishing to sign up for the Economic Development Rate must submit a request to Hydro-Québec in writing. The customer's request must contain the following information:

- a) A summary description of the planned facility or expansion project, including, but not limited to, the products, if any, to be manufactured, the processes and technologies to be implemented, and the anticipated investments and operating costs;
- b) The scheduled commissioning date;
- c) Estimates of the power demand and the energy that will be consumed, on average, under the contract in question;

- d) An attestation to the effect that the Economic Development Rate was one of the determining factors in the customer's decision to build or expand a facility in Québec.

Within 90 days of Hydro-Québec's written acceptance, the customer must sign an agreement undertaking to commission the new facility or equipment within 3 years. The agreement will incorporate the information submitted in support of the request and will specify:

- a) The historical demand and historical energy, if applicable;
- b) The sign-up date, which corresponds to the commissioning date or to any other date agreed upon by the parties;
- c) The rate reduction applicable for the years in question.

Duration of commitment **6.64**

Subject to signing of the agreement provided for in Article 6.63, the contract becomes subject to the Economic Development Rate on the sign-up date determined in accordance with Article 6.63.

A customer may benefit from the conditions of application for running-in, described in Section 7 of this chapter, during the commissioning of the new facility or equipment. The contract then becomes subject to the Economic Development Rate at the beginning of the first consumption period during which there was no running-in or at the beginning of any consumption period during the running-in, at the customer's discretion. The date chosen will constitute the sign-up date.

The Economic Development Rate will apply as of the sign-up date until March 31, 2027, as set out in the agreement provided for in Article 6.63, including the transition period during which the rate reduction will diminish progressively, as described in Article 6.65.

Rate reduction and transition period **6.65**

The initial rate reduction is 20%. During the 3-year transition period, the applicable reduction will decrease by 5 percentage points a year until it reaches 0% at the end of the commitment.

Billing – New facility**6.66**

In the case of a new facility, the bill for each consumption period is determined as follows:

- a) An initial amount is calculated using the prices and conditions applicable to the billing demand and energy consumption at Rate L or the applicable general rate, as the case may be, taking into account, as applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4;
- b) A second amount is calculated by multiplying the amount in subparagraph a) by the rate reduction applicable for that year, as set out in the agreement provided for in Article 6.63;
- c) The amount obtained in subparagraph b) is subtracted from the amount obtained in subparagraph a).

Billing – Expansion of an existing facility**6.67**

In the case of an expansion of an existing facility, the bill for each consumption period is determined as follows:

- a) An initial amount is calculated using the prices and conditions applicable to the billing demand and energy consumption at Rate L or the applicable general rate, as the case may be, taking into account, as applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4;
- b) A second amount is calculated by applying the prices and conditions for Rate L or the applicable general rate, as the case may be, to the historical demand and the historical energy, taking into account, as applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4;
- c) The amount obtained in subparagraph b) is subtracted from the amount obtained in subparagraph a).
The result cannot be negative;
- d) The amount obtained in subparagraph c) is multiplied by the rate reduction for the year in question, as set out in the agreement provided for in Article 6.63;

- e) The amount obtained in subparagraph d) is subtracted from the amount obtained in subparagraph a).

Breach of commitment **6.68**

Hydro-Québec may cease applying the Economic Development Rate to the contract of a customer who fails to uphold their commitment as set out in the agreement provided for in Article 6.63. The contract will then become subject to Rate L, if it is eligible for such rate, or to the applicable general rate.

End of commitment **6.69**

The customer may opt out of the Economic Development Rate at any time. To do so, they must notify Hydro-Québec in writing, indicating the date as of which they want Rate L, if they are eligible for such rate, or the applicable general rate to apply to the contract. Once opted out, the customer may not sign up for the Economic Development Rate again.

Billing terms and conditions for customers benefiting simultaneously from the Economic Development Rate and the Additional Electricity Option **6.70**

For large-power customers benefiting simultaneously from the Economic Development Rate and the Additional Electricity Option, the terms and conditions described in this section and in Section 4 of this chapter apply, with the following adjustments:

- a) The billing demand mentioned in articles 6.66 and 6.67 corresponds to the reference power for the consumption period in question, but must not be less than the minimum billing demand;
- b) The energy consumption mentioned in articles 6.66 and 6.67 corresponds to the difference between actual consumption and additional electricity for the consumption period in question.

Subsection 5.2 – Customers of a Municipal System

Application **6.71**

This subsection applies to a municipal system that applies the Economic Development Rate set forth in Subsection 5.1 of this chapter to a medium- or large-power contract.

Object **6.72**

For all eligible contracts, Hydro-Québec reimburses the municipal system for an amount corresponding to the rate reduction granted to the customer.

Terms and conditions of application **6.73**

To be eligible for the Economic Development Rate, the customer of a municipal system must meet the conditions set forth in Subsection 5.1 of this chapter as well as the following conditions:

- a) The customer shall submit their request to Hydro-Québec and to the municipal system along with all relevant supporting documents and all the information required under Article 6.63;
- b) Hydro-Québec determines whether the contract is eligible for the Economic Development Rate under the conditions set forth in articles 6.62 and 6.63, and notifies the customer and the municipal system in writing of its decision to accept or deny the request;
- c) The customer shall sign the agreement provided for in Article 6.63, countersigned by the municipal system, within 90 days of Hydro-Québec's written acceptance;
- d) Hydro-Québec reimburses the municipal system for an amount corresponding to the rate reduction calculated in accordance with subparagraph b) of Article 6.66 or subparagraph d) of Article 6.67 for each consumption period covered by the agreement, unless Hydro-Québec ceases to apply the Economic Development Rate because of a breach of commitment, as provided for in Article 6.68.

SECTION 6

INDUSTRIAL REVITALIZATION RATE FOR RATE L CUSTOMERS

Application

6.74

The Industrial Revitalization Rate described in this section applies to the Rate L contract of a customer who was eligible for it on March 6, 2025, and who undertakes, as a result of the present rate, to return all or part of a plant's unused production capacity to operation or to convert one or more industrial processes to electricity.

It does not apply when the customer is benefiting from the Load Retention Rate or the Economic Development Rate, respectively described in sections 1 and 5 of this chapter.

Definitions

6.75

In this section, the following definitions apply:

historical demand: The average of the billing demands during the historical period, weighted according to the number of hours. Hydro-Québec may adjust the historical demand as needed to better reflect the customer's normal consumption profile. The historical demand is never less than the customer's minimum billing demand at Rate L.

historical period: The 12 consecutive consumption periods preceding the date on which the customer submits a request to sign up for the Industrial Revitalization Rate. If the 12 consumption periods do not reflect the customer's normal consumption profile, excluding the unused production capacity or prior to the conversion of the industrial process or processes to electricity, Hydro-Québec may consider the historical period to be any other time range it deems more appropriate or use other criteria to determine the customer's normal consumption profile.

supplementary electricity: The amount of energy corresponding to the difference between the real power demand and the historical demand, for each 15-minute integration period. This quantity cannot be negative.

unauthorized period: A period during which the customer's power demand must not exceed the historical demand.

Eligibility**6.76**

For the contract to be eligible for the Industrial Revitalization Rate, the following conditions must be met:

- a) The plant must return unused production capacity to operation or convert one or more industrial processes to electricity;
- b) The customer must provide an undertaking that returning unused production capacity to operation or converting the industrial process or processes to electricity will add at least 500 kilowatts to the historical demand;
- c) The plant must have significant potential for the net addition of new loads in Québec. Consequently, the added load stemming from the return to operation of unused production capacity or the conversion of the industrial process or processes to electricity must not be the result of production transfers between entities or facilities of the same company or of different companies within Québec.

Sign-up procedure**6.77**

A customer wishing to sign up for the Industrial Revitalization Rate must submit a request to Hydro-Québec in writing. The customer's request must contain the following information:

- a) A summary description of the plant's situation;
- b) The date scheduled for the return to operation of the unused production capacity or the conversion of the industrial process or processes to electricity under this rate, as well as the duration of the customer's commitment for the purposes of this rate;
- c) Estimates of the power demand and the energy that will be consumed, on average, under the contract after the return to operation of the unused production capacity or the conversion of the industrial process or processes to electricity;

- d) An attestation to the effect that the Industrial Revitalization Rate was one of the determining factors in the customer's decision to return unused production capacity to operation or to convert one or more industrial processes to electricity in Québec.

Subject to an agreement on the historical demand and to Hydro-Québec's written approval, the rate will take effect, at the customer's discretion, either at the beginning of the consumption period following the period during which Hydro-Québec receives the customer's written request, or on the date on which the plant's unused production capacity is returned to operation or the date on which the industrial process or processes are converted to electricity.

Commitment **6.78**

The customer undertakes to sign up for the Industrial Revitalization Rate for a minimum of 3 consumption periods during the 12 consecutive monthly periods following the sign-up date.

Renewal of commitment **6.79**

A customer may renew a commitment regarding the Industrial Revitalization Rate by submitting a request to Hydro-Québec in writing before the end of the commitment. The rate will continue to apply to the same contract, subject to Hydro-Québec's approval.

Determining the price of electricity **6.80**

The price of electricity supplied under the Industrial Revitalization Rate is equal to:

- a) During the winter period, the result of the formula provided in subparagraph a) of Article 6.52;
- b) During the summer period, the average cost of heritage pool electricity in effect.

The applicable price cannot be lower than the price of energy at Rate L, i.e., 3.681¢ per kilowatthour.

Notification of the price of electricity **6.81**

Hydro-Québec shall notify the customer of the price of electricity supplied under the Industrial Revitalization

Rate 7 business days prior to December 1 for the winter period, and 7 business days prior to April 1 for the summer period.

Billing **6.82**

For each consumption period, the Industrial Revitalization Rate applies to all or to the eligible portion of the load, as the case may be, as follows:

- a) An initial amount is calculated by applying the Rate L prices and conditions in effect to the historical demand, taking into account, as applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses described in articles 12.2 and 12.4;
- b) A second amount is calculated by multiplying the difference between actual consumption and the supplementary electricity for the consumption period by the price of energy at Rate L;
- c) A third amount is calculated by multiplying the supplementary electricity by the price determined in accordance with Article 6.80;
- d) The results obtained in subparagraphs a), b) and c), as well as any amount related to the power factor applicable under Article 6.83, are added up.

When a consumption period overlaps with the beginning or end of the winter period, the amount billed for supplementary electricity is prorated according to the number of hours in the consumption period that fall within the summer period and the winter period, respectively.

Condition related to the power factor **6.83**

If, during a given consumption period, the maximum power demand exceeds the highest real power demand, Hydro-Québec applies the demand charge in effect for Rate L to the difference between those two values.

Restrictions **6.84**

Hydro-Québec may prohibit consumption of electricity supplied under the Industrial Revitalization Rate on 2 hours' notice, based on system management requirements and availability.

Should the customer consume supplementary electricity during an unauthorized period, all consumption beyond historical demand during that period will be billed at \$1.000 per kilowatthour.

If Hydro-Québec notes that this situation has occurred 3 times or more during the last 12 consecutive monthly periods, it reserves the right to terminate the customer's contract at this rate.

The provisions of the Industrial Revitalization Rate shall not be interpreted as an obligation on the part of Hydro-Québec to assume any additional costs for connection, equipment installation or reinforcement of the transmission or distribution system to serve a customer who wishes to take advantage of the rate. The customer shall assume any and all costs associated with the delivery of electricity under the Industrial Revitalization Rate.

Hydro-Québec will neither build facilities to provide the Industrial Revitalization Rate nor allocate existing facilities to supplementary electricity loads in order to guarantee the availability of the energy.

This article shall not be interpreted as granting the customer permission to exceed their available power.

Breach of commitment	6.85
-----------------------------	-------------

Hydro-Québec reserves the right to cease applying the Industrial Revitalization Rate to the contract of a customer who fails to uphold their commitment under Article 6.78. The contract will then become subject to Rate L, if it is eligible for such rate, or to the applicable general rate.

Billing terms and conditions for Rate L customers benefiting simultaneously from the Industrial Revitalization Rate and the Additional Electricity Option	6.86
--	-------------

For Rate L customers benefiting simultaneously from the Industrial Revitalization Rate and the Additional Electricity Option, the terms and conditions described in this section and in Section 4 of this chapter apply, with the following adjustments:

- a) The historical demand is based on the real power recorded during the historical period or is determined using any other method that Hydro-Québec deems more appropriate, but it cannot be less than the minimum billing demand;
- b) The additional electricity is established based on the amount of energy corresponding to the difference between the historical demand and the reference power, for each 15-minute integration period. This quantity cannot be negative;
- c) The supplementary electricity is equal to the difference between actual consumption and the sum of the additional electricity and the consumption associated with the reference power.

Billing terms and conditions for Rate L customers benefiting simultaneously from the Industrial Revitalization Rate and the DR Commitment Option 6.87

For Rate L customers benefiting simultaneously from the Industrial Revitalization Rate and the DR Commitment Option, the terms and conditions described in this section and in Section 2 of this chapter apply, with the following adjustments:

- a) Consumption during recovery periods under the conditions set forth in Article 6.24 shall not be considered in the calculation of the supplementary electricity.
- b) The customer's base power is the difference between:
 - i. the contract power or the historical demand for the consumption period in question, whichever is higher, and
 - ii. the interruptible power.

Base power cannot be negative;

- c) The customer's maximum power is the historical demand for the consumption period in question;
- d) The customer's average maximum daily power is the historical demand for the consumption period in question.

SECTION 7

RUNNING-IN OF NEW EQUIPMENT BY MEDIUM- AND LARGE-POWER CUSTOMERS

Application

6.88

The running-in conditions described in this section apply to the Rate M, Rate L or Rate LG contract of a customer who wishes to run in one or more units of new equipment in order to operate them later on a regular basis using electricity supplied by Hydro-Québec. The customer may benefit from these conditions for a minimum of:

- a) 1 consumption period, and a maximum of 6 consecutive consumption periods, for customers to whom Article 6.89 applies;
- b) 1 consumption period, and a maximum of 12 consecutive consumption periods, for customers to whom Article 6.90 or Article 6.91 applies;
- c) 1 consumption period, and a maximum of 24 consecutive consumption periods, for customers to whom Article 6.92 applies.

To benefit from these conditions, the customer must notify Hydro-Québec in writing at least 30 days before the running-in period, indicating the approximate beginning of the running-in period, and must submit to Hydro-Québec the nature of the equipment to be run in and a written estimate of the power demand and the energy that will be consumed, on average, under the contract after the running-in period. The power of the running-in equipment must be at least 10% of the minimum billing demand in effect at the time of the customer's written request, and no less than 100 kilowatts for a Rate M customer or 500 kilowatts for a Rate L or Rate LG customer.

Subject to a written agreement on the estimate of the power demand and energy consumption after the running-in period, the Rate M, Rate L or Rate LG conditions for running-in will apply as of the beginning of the first consumption period during which the running-in takes place. The customer must notify Hydro-Québec of the exact date of the beginning of the running-in at least 5 business days before it starts and must obtain Hydro-Québec's written approval.

Contract whose billing history includes 12 or more consumption periods at Rate M during which there was no running-in under this section or equipment testing under Section 8 of this chapter 6.89

When part of the customer's power demand is for the running-in of equipment and the billing history includes 12 or more consumption periods at Rate M during which there was no running-in or equipment testing, the electricity bill is determined as follows:

- a) An average price, expressed in cents per kilowatthour, is determined on the basis of the average billing demand and the average energy consumed in the last 12 consumption periods during which there was no running-in or equipment testing. Upon written request, days during which a strike was held at the customer's premises are not taken into account in these averages. The Rate M prices and conditions in effect during the consumption period in question, within the running-in period, are applied to these averages, taking into account, as applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4.
- b) For each consumption period during the running-in period, the energy consumed is billed at the average price determined according to the preceding subparagraph, plus 4%. However, the minimum bill per consumption period is at least equal to the average billing demand of the last 12 consumption periods preceding the running-in period, multiplied by the demand charge in effect during the consumption period in question within the running-in period. If applicable, the demand charge is adjusted to take into account the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4.

When the consumption profile for the last 12 consumption periods during which there was no running-in or equipment testing does not reflect the anticipated consumption profile following the running-in period, Hydro-Québec may apply the provisions of Article 6.90.

Contract whose billing history includes fewer than 12 consumption periods at Rate M during which there was no running-in under this section or equipment testing under Section 8 of this chapter 6.90

When all or part of the customer's power demand is for the running-in of equipment and the billing history includes fewer than 12 consumption periods at Rate M during which there was no running-in or equipment testing, the electricity bill is determined as follows:

- a) An average price, expressed in cents per kilowatthour, is determined on the basis of estimates of the power demand and energy consumption after the running-in period. The Rate M prices and conditions in effect during the consumption period in question, within the running-in period, are applied to these estimates, taking into account, as applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4.
- b) During the running-in period, the energy consumed is billed at this average price, plus 4%.

At the end of 3 consumption periods following the end of the running-in period, the bills applying to the running-in period are adjusted if need be. An average price, expressed in cents per kilowatthour, is determined on the basis of the maximum power demand and the energy consumed on average during these last 3 consumption periods and on the Rate M prices and conditions in effect during the running-in period. If this price, increased by 4%, is different from the billing price, the bills for the running-in period will be adjusted accordingly.

Contract whose billing history includes 12 or more consumption periods at Rate L or Rate LG during which there was no running-in 6.91

When part of the customer's power demand is for the running-in of equipment and the billing history includes 12 or more consumption periods at Rate L or Rate LG during which there was no running-in, the electricity bill is determined as follows:

- a) An average price, expressed in cents per kilowatthour, is determined on the basis of the average billing demand and the average energy consumed in the last

12 consumption periods during which there was no running-in. Upon written request, days during which a strike was held at the customer's premises are not taken into account in these averages. The Rate L or Rate LG prices and conditions in effect during the consumption period in question, within the running-in period, are applied to these averages, taking into account, as applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4.

- b) For each consumption period during the running-in period, the energy consumed is billed at the average price determined according to the preceding subparagraph, plus a percentage calculated using the following formula:

$$\frac{4\% \times P_r}{(PMA_h + P_r)}$$

where

P_r = the power of the running-in equipment;

PMA_h = the average maximum power demand in effect during the last 12 consumption periods preceding the running-in period.

The increase cannot be less than 1%.

However, the minimum bill per consumption period is determined on the basis of the average billing demand and the average energy consumed in the last 12 consumption periods preceding the running-in period. The Rate L or Rate LG prices and conditions in effect during the consumption period in question, within the running-in period, are applied to these averages, taking into account, as applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4.

Contract whose billing history includes fewer than 12 consumption periods at Rate L or Rate LG during which there was no running-in **6.92**

When all or part of the customer's power demand is for the running-in of equipment and the billing history

includes fewer than 12 consumption periods at Rate L or Rate LG during which there was no running-in, the electricity bill is determined as follows:

- a) An average price, expressed in cents per kilowatthour, is determined on the basis of estimates of the power demand and energy consumption after the running-in period. The Rate L or Rate LG prices and conditions in effect during the consumption period in question, within the running-in period, are applied to these estimates, taking into account, as applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4.
- b) During the running-in period, the energy consumed is billed at this average price, plus 4%.

After 12 consecutive consumption periods of running-in, the minimum bill per consumption period is determined on the basis of the average billing demand, which must be at least 5,000 kilowatts, and the average energy consumed during the last 3 consumption periods of the first year of running-in. The Rate L or Rate LG prices and conditions in effect during the consumption period in question, within the running-in period, are applied to these averages, taking into account, as applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4.

At the end of 3 consumption periods following the end of the running-in period, the bills applying to the running-in period are adjusted if need be. An average price, expressed in cents per kilowatthour, is determined on the basis of the maximum power demand and the energy consumed on average during these last 3 consumption periods and on the Rate L or Rate LG prices and conditions in effect during the running-in period. If this price, increased by 4%, is different from the billing price, the bills for the running-in period will be adjusted accordingly.

Termination of the running-in conditions

6.93

To terminate application of the running-in conditions, the customer must so notify Hydro-Québec in writing. The running-in conditions cease to apply, at the customer's discretion, either at the beginning of the consumption

period in effect when Hydro-Québec receives the customer's written notice, at the beginning of either of the 2 previous consumption periods or at the beginning of either of the 2 subsequent consumption periods.

Hydro-Québec may terminate the running-in conditions on 30 days' notice if the customer is unable to demonstrate that equipment is being run in.

Reapplication of running-in conditions **6.94**

Following a new equipment addition, a customer may once again benefit from the running-in conditions. To do so, they must submit a new request to Hydro-Québec in accordance with the provisions of Article 6.88.

Restrictions **6.95**

Depending on system management requirements and availability, Hydro-Québec may limit power demand to the level stipulated in the written agreement specified in Article 6.88. All consumption beyond this demand level is billed at 60.262¢ per kilowatthour.

This article shall not be interpreted as granting the customer permission to exceed their available power.

SECTION 8

**EQUIPMENT TESTING BY MEDIUM- AND
LARGE-POWER CUSTOMERS**

Application **6.96**

The conditions for equipment testing described in this section apply, subject to the installation of the appropriate metering equipment, to the Rate M, Rate G9, Rate L or Rate LG contract of a customer who wishes to conduct one or more tests following the addition of new equipment or the modification or optimization of existing equipment. The customer may benefit from them for a minimum of 1 hour and a maximum of 1 consumption period.

To benefit from these conditions, the customer must notify Hydro-Québec in writing, at least 5 business days before the test period(s), of the scheduled start and end dates and times of such test period(s). The customer

must also inform Hydro-Québec of the nature of the new equipment or of the modifications or optimization work as well as the power rating of the equipment to be tested, subject to Hydro-Québec's written approval. The maximum power demand during the test period(s) must be at least 500 kilowatts.

Billing**6.97**

At the end of the consumption period in question, the customer must confirm the actual start and end dates and times of the test period(s). Once Hydro-Québec has approved these test periods, the customer's bill for the consumption period is determined as follows:

- a) An initial amount is calculated by applying the Rate M, Rate G9, Rate L or Rate LG prices in effect, as the case may be, to the billing demand recorded outside of the test period(s) and to the energy consumed during the consumption period in question, taking into account, as applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4;
- b) A second amount is calculated by adding up the real power demands exceeding the billing demand as determined under subparagraph a) for each 15-minute integration period within the actual hours of the test period(s), and multiplying the result by 12.053¢ per kilowatthour;
- c) The results obtained in subparagraphs a) and b) are added up.

Restriction**6.98**

Hydro-Québec may prohibit the consumption of electricity for equipment testing purposes, based on system management requirements and availability.

SECTION 9

DEMAND RESPONSE OPTION

Application 6.99

The Demand Response Option described in this section applies until March 31, 2026, to the Rate DM, Rate DP, Rate G, Rate H, Rate M, Rate G9 or Rate LG contract of a customer who is able to reduce their power demand during the winter period at Hydro-Québec's request.

Definitions 6.100

In this section, the following definitions apply:

average temperature: The value in degrees Celsius of the average of the temperatures recorded at the weather station closest to the delivery point during peak hours.

effective interruptible power: The value in kilowatts of the average power reductions over all the peak demand events. The effective interruptible power is calculated after the winter period.

peak demand event: The sequence of peak hours indicated by Hydro-Québec in the peak demand event notification sent to the customer in accordance with Article 6.105.

peak hours: All hours from 06:00 to 09:00 and from 16:00 to 20:00 during the winter period, excluding:

- a) weekends;
- b) December 24, 25, 26 and 31, January 1 and 2, as well as Good Friday and Easter Monday when the latter fall within the winter period.

power reduction: The value in kilowatts of the difference between reference power and real power during the peak demand event. This value cannot be negative.

real power demand during the peak demand event: The value in kilowatts of the service contract's average real power demand during the peak demand event.

reference period: Depending on whether the peak demand event occurs in the morning or evening, the peak

period between 06:00 and 09:00 or between 16:00 and 20:00 during which there was no peak demand event.

reference power: A value in kilowatts estimated from linear regressions of the service contract's average real power demand based on the customer's normal consumption profile and of the average temperature during the reference period. Hydro-Québec may adjust the reference power as needed to better reflect the customer's normal consumption profile.

Sign-up procedure

6.101

To sign up for this option, the customer must submit a request to Hydro-Québec in writing by September 30. After analysis, Hydro-Québec may ask that modifications be made to the request.

Hydro-Québec notifies the customer in writing of its decision to accept or deny the request. If it is accepted, the parties must sign an agreement for the coming winter period, specifying the service contract covered and the weather station closest to the delivery point.

Eligibility

6.102

For the contract to be eligible for this option, the following conditions must be met:

- a) Metering must be done by a communicating meter installed by Hydro-Québec. However, this provision may not be interpreted as an obligation on the part of Hydro-Québec to install a communicating meter for a customer who does not have one. Hydro-Québec also reserves the right to terminate a customer's enrollment in this option in the event of recurring problems in gathering hourly metering data;
- b) The customer must not be served by an off-grid system or a municipal system;
- c) The customer must not benefit, for the same service contract, from the options, rates or conditions described in sections 3 and 4 of Chapter 3 (Winter Credit Option and Rate Flex G), sections 3, 5, 7 and 8 of Chapter 4 (Rate GD, Rate BR, Rate Flex M and Rate Flex G9) and sections 2, 7 and 8 of this chapter (DR Commitment Option, running in and testing of equipment), nor from Rate CB described in Chapter 7;

Limitation **6.103**

Hydro-Québec reserves the right to limit the total amount of power it intends to avail itself of under this option, depending on its system management needs. If the power available exceeds its needs for a given period, it may restrict the number of new sign-up requests it accepts on a first-come, first-served basis.

Conditions applicable to peak demand events **6.104**

Peak demand events may occur at any time during peak hours. They must meet the following conditions:

Maximum number of events per day: 2

Minimum interval between 2 events (hours): 7

Event duration (hours): 3-4

Maximum total event duration per winter period (hours): 100

Peak demand event notifications **6.105**

Hydro-Québec notifies the customer's designated contact(s) of the event start and end date and times by phone, email or any other means agreed upon with the customer.

Peak demand event notifications will be transmitted as follows:

- No later than 15:00 on the business day preceding any peak demand event scheduled from 06:00 to 09:00;
- No later than 12:00 on the day of any peak demand event scheduled from 16:00 to 20:00;
- No later than 15:00 on the business day preceding 2 peak demand events scheduled from 06:00 to 09:00 and 16:00 to 20:00 on the same day.

To check the proper transmission of peak demand event notifications, Hydro-Québec will send 2 test notifications to the email addresses provided by the customer, on the first and third Tuesdays in November. For these tests, no demand reduction measures have to be implemented, and no credit will be granted.

Hydro-Québec cannot be held responsible for non-receipt of a peak demand event notification due to an erroneous email address provided by the customer or technical problems experienced by the customer or their telecommunications provider.

Credit**6.106**

The credit applicable for the winter period is as follows:

- \$81.663 per kilowatt of effective interruptible power for an average power demand reduction ranging from 10 kilowatts to 100 kilowatts;
- \$70.774 per kilowatt of effective interruptible power for an average power demand reduction ranging from more than 100 kilowatts to 400 kilowatts;
- \$65.330 per kilowatt of effective interruptible power for an average power demand reduction ranging from more than 400 kilowatts to 1,200 kilowatts;
- \$59.886 per kilowatt of effective interruptible power for a power demand reduction exceeding 1,200 kilowatts.

No credit is granted if the effective interruptible power is less than 10 kilowatts.

If Hydro-Québec does not send any peak demand event notifications under Article 6.105 during the winter period, it will grant the customer an amount equal to the lesser of the following values:

- 15% of the contract's maximum power demand for the winter period multiplied by \$71.863 per kilowatt;

or

- \$21,776.720.

If no power demand reduction is noted during more than 4 peak demand events in a given winter period while the service contract is active, Hydro-Québec reserves the right not to grant any credit to the customer.

The amount of the credit will be confirmed to the customer by the third billing cycle following the winter period in which the events took place.

The customer will have access to a report titled *Details of the credit applied to the bill* through their Customer Space.

Hydro-Québec may deduct from the credit any amount owed to it by the customer.

Termination**6.107**

A customer who no longer wishes to benefit from this option must notify Hydro-Québec by calling customer services.

The option ceases to apply the day after Hydro-Québec is notified by the customer, and no credit is granted.

This article does not, however, apply if the customer terminates the service contract during the winter period.

CHAPTER 7

RATE FOR CRYPTOGRAPHIC USE APPLIED TO BLOCKCHAINS

SECTION 1

RATE CB

Subsection 1.1 – Hydro-Québec Customers

Application 7.1

Rate CB applies to an annual contract under which electricity is delivered, in whole or in part, for cryptographic use applied to blockchains and where the installed capacity dedicated to this use is at least 50 kilowatts.

More specifically, it applies to service contracts for cryptographic use for mining or to maintain a cryptocurrency system in return for compensation.

The Rate CB customer may not benefit from the Industrial Revitalization Rate described in Section 4 of Chapter 4, nor from the rates or options described in sections 1, 2, 4, 5 and 6 of Chapter 6 (Load Retention Rate, DR Commitment Option, Additional Electricity Option, Economic Development Rate and Industrial Revitalization Rate).

The customer must not be served by an off-grid system.

Definitions 7.2

In this section, the following definitions apply:

authorized consumption: A value, expressed in kilowatthours, corresponding to the consumption associated with the authorized demand during a consumption period.

authorized demand: A value, expressed in kilowatts, corresponding to one of the following, as the case may be:

- a) The maximum power demand recorded between the beginning of the consumption period that includes January 1, 2018, and the end of the consumption period that includes June 7, 2018;

- b) The available power for cryptographic use applied to blockchains at the connection point that was confirmed to the customer in writing by Hydro-Québec and agreed to in writing by the customer prior to June 7, 2018. To make use of all or part of this capacity, the customer must have submitted at least one connection request by March 3, 2022, as provided for in Hydro-Québec's *Conditions of Service*. After this date, any power demand that is not included in a connection request is no longer considered to be authorized demand, and the associated energy consumed by the customer is billed at the price of energy for consumption above or other than authorized consumption;
- c) The installed capacity covered by a connection agreement signed with Hydro-Québec by a customer selected through a request for proposals;
- d) The installed capacity officially allocated under the process for allocating the balance of the dedicated block, in accordance with Hydro-Québec's *Conditions of Service*.

blockchain: A distributed and secure database, in its current and future versions, in which successive transactions between users are recorded in chronological order in the form of interlinked blocks going back to the first block in the chain.

cryptographic use applied to blockchains: The use of electricity for the purpose of operating computer equipment dedicated to cryptographic calculations which serve, in particular, to validate successive transactions made by users of a blockchain.

curtailment period: A period during which the customer's real power demand may not exceed 5% of the highest value recorded during a consumption period included in the 12 consecutive monthly periods ending at the end of the consumption period in question.

mining: An operation based on a validation mechanism to add blocks of transactions to a cryptocurrency system, in exchange for miner fees.

Structure of medium-power Rate CB**7.3**

The structure of monthly Rate CB for a medium-power annual contract, i.e., a contract with a minimum billing demand of less than 5,000 kilowatts, is as follows:

- \$17.573 per kilowatt of billing demand
- plus
- 6.061¢ per kilowatthour for the first 210,000 kilowatthours of authorized consumption, and
- 4.495¢ per kilowatthour for the remaining authorized consumption,
- plus
- 18.078¢ per kilowatthour for any consumption above or other than the authorized consumption.

The minimum monthly bill is \$14.860 when single-phase electricity is delivered or \$44.581 when three-phase electricity is delivered.

If applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4, apply.

Structure of large-power Rate CB**7.4**

The structure of monthly Rate CB for a large-power annual contract, i.e., a contract with a minimum billing demand of 5,000 kilowatts or more, is as follows:

- \$15.963 per kilowatt of billing demand
- plus
- 4.165¢ per kilowatthour for authorized consumption,
- plus
- 18.078¢ per kilowatthour for any consumption above or other than the authorized consumption.

If applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4, apply.

Billing demand 7.5

The billing demand at Rate CB is equal to the maximum power demand during the consumption period in question, but is never less than the minimum billing demand, as described in Article 7.7.

Condition related to the power factor for power demand less than 5,000 kilowatts under a large-power contract 7.6

If, during a consumption period, the maximum power demand exceeds the highest real power demand, which is less than 5,000 kilowatts, Hydro-Québec applies the demand charge to the difference between:

- a) the maximum power demand up to 5,000 kilowatts; and
- b) the highest real power demand.

If applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4, apply.

Minimum billing demand 7.7

Depending on whether the contract is a medium-power or large-power contract, the minimum billing demand for any given consumption period is equal to 65% or 75%, respectively, of the maximum power demand during a consumption period that falls wholly within the winter period included in the 12 consecutive monthly periods ending at the end of the consumption period in question. For a large-power contract, this value cannot be less than 5,000 kilowatts.

When the minimum billing demand reaches or exceeds 5,000 kilowatts, the contract ceases to be eligible for medium-power Rate CB and becomes subject to large-power Rate CB.

Large-power Rate CB applies as of the beginning of the consumption period during which the minimum billing demand reached or exceeded 5,000 kilowatts.

When a customer terminates an annual contract and signs another for the delivery of electricity at the same location and for similar purposes within the following 12 consecutive monthly periods, these two contracts

are considered to be a single contract for calculation of the minimum billing demand.

For a change to medium-power or large-power Rate CB from Rate G, Rate M, Rate G9, Rate LG or a domestic rate, the minimum billing demand is determined as specified in this article.

Minimum billing demand of less than 5,000 kilowatts 7.8

A large-power Rate CB customer may opt for medium-power Rate CB at any time by submitting a request to Hydro-Québec in writing. The rate change takes effect either at the beginning of the consumption period during which Hydro-Québec receives the written request, at any date and time during that consumption period or at the beginning of the previous consumption period, at the customer's discretion.

Conditions applicable to non-firm service 7.9

Service at Rate CB is provided as a non-firm service. Hydro-Québec may therefore curtail the real power demand under the contract to 5% of the highest value recorded during a consumption period included in the 12 consecutive monthly periods ending at the end of the consumption period in question. It may do so for a maximum of 300 hours per rate year, i.e., from April 1 of one calendar year through March 31, inclusive, of the next year, upon 2 hours' notice prior to the start of any curtailment period.

Electricity consumed above the 5% limit during this period will be billed at \$1.000 per kilowatthour.

Notice of curtailment 7.10

Hydro-Québec will notify the representative(s) designated by the customer, by telephone, email or any other means agreed upon with the customer, of the start and end date and time of any curtailment period. If no representative can be reached, the customer is deemed to have refused to curtail power during that curtailment period.

Subsection 1.2 – Customers of a Municipal System

Application 7.11

This subsection applies to a municipal system that applies Rate CB set forth in Subsection 1.1 of this chapter to one or more medium- or large-power contracts.

Terms and conditions of application 7.12

The terms and conditions described in Subsection 1.1 of this chapter apply, with the following adjustments:

- a) The authorized demand, expressed in kilowatts, corresponds to one of the following, as the case may be:
 - i. The installed load already in place for cryptographic use applied to blockchains for all existing contracts between a municipal system and its customers prior to June 7, 2018;
 - ii. The available power for cryptographic use applied to blockchains at the connection point of the municipal system that was confirmed in writing by the municipal system and agreed to in writing by the customer prior to June 7, 2018;
 - iii. The installed capacity covered by a written agreement signed by the municipal system and a customer selected following the awarding of a certain amount of power demand authorized by the Régie de l'énergie.
- b) The municipal system must send Hydro-Québec a copy of any agreement it has signed with a customer selected following the awarding of a certain amount of power demand authorized by the Régie de l'énergie regarding any installed capacity for cryptographic use applied to blockchains. Hydro-Québec must preserve the confidentiality of any agreement transmitted to it in this way.
- c) The municipal system must disclose to Hydro-Québec any installed capacity for cryptographic use applied to blockchains other than that provided for in subparagraph b) of this article.

In the case of a municipal system's customers who meet one of the characteristics set out in Section 7.12, service at Rate CB is provided as a non-firm service. The municipal system, subject to the conditions provided below, decides how to apply the curtailment means at its disposal.

Hydro-Québec and a municipal system that supplies electricity to one or more Rate CB customers must conclude an agreement that defines the curtailment conditions applicable for a maximum of 100 hours per winter period, i.e., from December 1 of one calendar year through March 31, inclusive, of the next year, at Hydro-Québec's request, for a power demand corresponding to the total load for cryptographic use applied to blockchains supplied by the municipal system. For these 100 hours, Hydro-Québec may ask the municipal system to curtail the real power demand of its Rate CB customers to a maximum of 5% of the highest value recorded during a consumption period included in the 12 consecutive monthly periods ending at the end of the consumption period in question. The municipal system can, at its discretion, apply the curtailment means to any load on its system, not specifically to load for cryptographic use applied to blockchains.

The total load for cryptographic use supplied by a municipal system subject to one or more curtailment periods is not eligible for compensation by Hydro-Québec, and no penalty will be claimed by Hydro-Québec should a municipal system fail to respect a curtailment period.

If, in accordance with the terms and conditions of an agreement between Hydro-Québec and a municipal system, this agreement is terminated further to the failure of the municipal system to respect its obligations related to non-firm service conditions set out in the second paragraph of this article, the number of curtailment hours for the municipal system is fixed at 300 for the winter period. Hydro-Québec and the municipal system will then together decide on the measures required to reduce the power demand of Rate CB customers. The municipal system will be able to conclude a new agreement with Hydro-Québec that provides for a curtailment period of 100 hours per winter period, on condition that it is able to demonstrate, to Hydro-Québec's satisfaction, that

it is capable of respecting its obligations related to non-firm service conditions set out in the second paragraph of this article.

Notice of curtailment**7.14**

Hydro-Québec advises the representative(s) designated by the municipal system, according to the conditions set out in the agreement provided for in Article 7.13, by telephone, email or any other means agreed upon with the municipal system, of the start and end date and time of any curtailment period. If no representative can be reached, the municipal system's customer is deemed to have refused to curtail power during that curtailment period.

Refund to municipal systems for large-power Rate CB contracts**7.15**

A refund is provided to a municipal system at Rate LG as compensation for the distribution activities it must engage in to supply electricity to one or more Rate CB customers whose installations are supplied at medium voltage.

The municipal system is entitled to a refund of 5.6% of the amounts billed to each of its large-power Rate CB customers if the maximum power demand under their contracts during a given consumption period is at least 5,000 kilowatts and no more than 12,000 kilowatts. A municipal system that supplies electricity to a Rate CB customer may not divide the load among multiple delivery points to a single building.

If the maximum power demand is between 4,300 and 5,000 kilowatts, the percentage of the refund is determined as follows:

$$\frac{(\text{Maximum power demand} - 4,300 \text{ kW}) \times 5.6\%}{700 \text{ kW}}$$

If the maximum power demand is greater than 12,000 kilowatts, the percentage of the refund is determined as follows:

$$\frac{12,000 \text{ kW} \times 5.6\%}{\text{Maximum power demand}}$$

If the maximum power demand is less than 4,300 kilowatts, the municipal system is not entitled to a refund.

For a municipal system to be entitled to the refund, the customer cannot be a former Hydro-Québec customer, unless they became a customer of the municipal system with Hydro-Québec's consent.

To obtain a refund, the municipal system must provide Hydro-Québec, for each consumption period, with supporting documents proving that it is entitled to a refund.

CHAPTER 8

SMALL- AND MEDIUM-POWER DUAL-ENERGY RATE

SECTION 1

SMALL- AND MEDIUM-POWER DUAL-ENERGY RATE

Application 8.1

The Small- and Medium-Power Dual-Energy Rate for Space Heating applies to the annual small- or medium-power contract of a customer who uses a dual-energy system that meets the conditions specified in Article 8.4.

This rate only applies to the electricity consumed by the dual-energy system for space heating purposes. All other consumption is subject to a distinct contract at Rate G, Rate M or Rate G9, as the case may be.

The dual-energy rate is not offered to independent producers.

Definitions 8.2

In this section, the following definitions apply:

collaboration agreement: An agreement between Hydro-Québec and a natural gas distributor regarding a dual-energy offer.

dual-energy offer: A joint offer by Hydro-Québec and a natural gas distributor aimed at inciting customers to convert their heating system to dual energy involving electricity and natural gas.

heating season: The period from October 1 of one year through April 30 of the next year, inclusive.

non-heating season: The period from May 1 through September 30, inclusive.

Eligibility 8.3

For the contract to be eligible for this rate, the following conditions must be met:

- a) The dual-energy system must meet the conditions specified in Article 8.4;

- b) The electricity supplied to the dual-energy system must be metered separately by an appropriate meter capable of measuring the maximum power demand;
- c) The customer must not benefit, for the same service contract, from the Winter Credit Option described in Section 3 of Chapter 3, nor from the options described in sections 2, 3 and 4 of Chapter 6 (DR Commitment Option, DR Leeway Option and Additional Electricity Option);
- d) The electrical installation must not be supplied by an off-grid system.

Characteristics of the dual-energy system

8.4

The dual-energy system must meet all of the following conditions:

- a) It must consist of a central space heating system designed in such a way that electricity is used as the main heating source and a fuel as the auxiliary source;
- b) The capacity of the dual-energy system in fuel mode must be sufficient to heat the premises in question. The energy sources of the dual-energy system must not be used simultaneously below the switchover temperature;
- c) The dual-energy system must be equipped with an automatic switch permitting transfer from one energy source to the other. For this purpose, the automatic switch must be connected to a temperature gauge in accordance with the provisions of subparagraph d) hereinafter;
- d) The temperature gauge is supplied and installed by Hydro-Québec in a location and under conditions which Hydro-Québec determines. The gauge indicates to the automatic switch when a change of operating mode is required in view of the outdoor temperature. The fuel mode is used when the outdoor temperature is below -12°C or -15°C , depending on the climate zones defined by Hydro-Québec;
- e) The customer may also use a switch to change from one energy source to the other, but must only do so in the event of equipment breakdown or a power outage;

- f) The distribution service loop must supply at least one dual-energy system.

Recovery after a power failure **8.5**

The dual-energy system may be equipped with a device that, after a power failure, only makes it possible for the system to operate on the auxiliary energy source for some time, regardless of the outdoor temperature. The device must meet Hydro-Québec's requirements.

Sign-up procedure **8.6**

To sign up for this rate, the customer must submit an application to Hydro-Québec in writing by completing the *Certificate of Eligibility – Dual Energy* form available at www.hydroquebec.com. Failure to provide all the required information could result in the customer's being denied access to the rate.

The customer who signs up for a contract at this rate for a service address to which the dual-energy offer applies accepts that the two distributors share between them the information required to implement their collaboration agreement, including in particular the service address, the start or end date of the application of this rate to the contract in question and the list of heating equipment used.

This rate applies as of the date the appropriate meter is installed.

The customer must notify Hydro-Québec of any change made to the dual-energy system during the term of the contract that would render it ineligible for this rate. In the event of non-compliance, Article 8.7 applies.

Non-compliance **8.7**

If Hydro-Québec is notified by the customer or notes that a dual-energy system no longer meets one of the conditions of application of this rate, the contract then becomes subject to the appropriate general rate. Unless the customer corrects the situation within 10 business days, the new rate comes into effect at the beginning of the consumption period during which the non-compliance was reported by the customer or noted by Hydro-Québec. Alternatively, at the customer's discretion, it may take effect at the beginning of one of the 12 previous monthly periods. The new rate will apply for a

minimum of 12 consecutive monthly periods, after which the customer may sign up for another rate for which the contract is eligible by submitting a rate change request.

Fraud **8.8**

If the customer commits fraud, manipulates or alters the dual-energy system, hinders its functioning in any way, or uses it for purposes other than those provided for under these *Rates*, Hydro-Québec will terminate the contract at the dual-energy rate. The contract then becomes subject to the appropriate general rate, and the dual-energy rate cannot apply again to the contract for at least 365 days.

Structure of the Small-Power Dual-Energy Rate **8.9**

The structure of the monthly Dual-Energy Rate for an annual small-power contract where the maximum power demand was less than 100 kilowatts during the non-heating season is as follows:

a) During the heating season:

6.738¢ per kilowatthour when the temperature is equal to or higher than -12°C or -15°C , depending on the climate zones defined by Hydro-Québec, and

60.262¢ per kilowatthour when the temperature is below -12°C or -15°C , as applicable.

or

b) During the non-heating season:

\$21.261 per kilowatt of billing demand in excess of 50 kilowatts

plus

11.933¢ per kilowatthour for the first 15,090 kilowatthours, and

9.184¢ per kilowatthour for the remaining energy consumption.

If applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4, apply.

Structure of the Medium-Power Dual-Energy Rate 8.10

The structure of the monthly Dual-Energy Rate for an annual medium-power contract where the maximum power demand was at least 50 kilowatts during the non-heating season is as follows:

a) During the heating season:

6.738¢ per kilowatthour when the temperature is equal to or higher than -12°C or -15°C , depending on the climate zones defined by Hydro-Québec, and

60.262¢ per kilowatthour when the temperature is below -12°C or -15°C , as applicable.

or

b) During the non-heating season:

\$17.573 per kilowatt of billing demand

plus

6.061¢ per kilowatthour for the first 210,000 kilowatthours, and

4.495¢ per kilowatthour for the remaining energy consumption.

If applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4, apply.

**Structure of the Medium-Power Dual-Energy Rate 8.11
for contracts with low load factors**

The structure of the monthly Dual-Energy Rate for an annual contract characterized by limited use of billing demand and where the maximum power demand has been at least 65 kilowatts during the non-heating season is as follows:

a) During the heating season:

6.738¢ per kilowatthour when the temperature is equal to or higher than -12°C or -15°C , depending on the climate zones defined by Hydro-Québec, and

60.262¢ per kilowatthour when the temperature is below -12°C or -15°C, as applicable.

or

b) During the non-heating season:

\$5.098 per kilowatt of billing demand,

plus

12.148¢ per kilowatthour.

If the maximum power demand in kilovoltamperes exceeds the highest real power demand during a consumption period included in whole or in part during a non-heating season, the excess is subject to a monthly charge of \$12.475 per kilowatt.

If applicable, the credit for supply at medium or high voltage and the adjustment for transformation losses, as described in articles 12.2 and 12.4, apply.

Billing demand **8.12**

The billing demand for a consumption period that falls within the non-heating season is equal to the maximum power demand during the consumption period in question. During the heating season, no billing demand applies.

Division of consumption period **8.13**

If a consumption period straddles May 1 or October 1, it is divided into two sub-periods for billing purposes. The electricity is billed according to the meter reading taken by Hydro-Québec on September 30 or April 30, as the case may be, at the rates in effect on that date.

Termination **8.14**

The customer may submit a written request for a change of rate during the term of the contract.

The change of rate takes effect, at the customer's discretion, either at the beginning of the consumption period during which Hydro-Québec receives the written request, at the beginning of the previous consumption period or at the beginning of any subsequent consumption period.

If the customer has received financial assistance for converting to dual-energy heating, the customer must fulfill the conditions related to the granting of such assistance.

CHAPTER 9

OFF-GRID SYSTEMS

SECTION 1

CONDITIONS OF APPLICATION OF DOMESTIC RATES FOR CUSTOMERS OF OFF-GRID SYSTEMS

Application of Rate DN 9.1

When electricity is delivered for domestic use from an off-grid system located north of the 53rd parallel, except the Schefferville system, the contract is subject to Rate DN.

Rate DN also applies to the exceptions provided for in articles 2.8 to 2.13 and 2.22. Barring provisions to the contrary, it does not apply:

- a) to youth or general tourist accommodation establishments covered in the *Tourist Accommodation Act* and its implementing regulation;
- b) to establishments covered in the *Act respecting health and social services*.

The general provisions described in Section 1 of Chapter 2 apply to Rate DN.

Structure of Rate DN 9.2

The structure of Rate DN for a weekly contract is as follows:

- 46.154¢ system access charge for each day in the consumption period, times the multiplier,

plus
- 6.905¢ per kilowatthour for energy consumed, up to the product of 40 kilowatthours, the number of days in the consumption period and the multiplier, and
- 47.054¢ per kilowatthour for the remaining consumption

plus a monthly charge of
- \$7.054 per kilowatt of billing demand in excess of the base billing demand.

If applicable, the credit for supply, as described in Article 12.3, applies.

Multiplier **9.3**

For a contract at Rate DN, the multiplier is 1, unless the contract was eligible for Rate DM on May 31, 2009.

Where the multiplier is not 1, it is determined as follows:

a) Apartment building or community residence consisting of dwellings:

Number of dwellings in the apartment building or community residence.

b) Community residence consisting of dwellings and rooms:

Number of dwellings in the apartment building or community residence

plus

1 for the first 9 rooms

plus

1 for each additional room.

c) Rooming house or community residence with 10 rooms or more:

1 for the first 9 rooms

plus

1 for each additional room.

Billing demand **9.4**

The billing demand at Rate DN is equal to the maximum power demand during the consumption period in question, but is never less than the minimum billing demand as defined in Article 9.5.

Minimum billing demand **9.5**

The minimum billing demand for any given consumption period is equal to 65% of the maximum power demand during a consumption period that falls wholly within

If the customer contravenes the provisions of this article, Hydro-Québec will apply the system access charge as well as the price and method for calculating billing demand specified in Rate G, Rate G9, Rate M or Rate MA, as the case may be, and all the energy consumed will be billed at 94.382¢ per kilowatthour.

Electricity delivered from an off-grid system located north of the 53rd parallel, except the Schefferville system, under a contract at Rate G, Rate G9, Rate M or Rate MA may be used for supply to heating cables in water treatment plant intake pipes, as well as to produce and maintain ice in arenas. For peak demand management purposes, however, such loads must be interrupted at Hydro-Québec's request.

Rate MA **9.9**

When electricity is delivered from an off-grid system, Rate MA applies to a contract under which the maximum power demand has ever exceeded 900 kilowatts.

Hydro-Québec may require that a single contract cover all electricity delivered when used for similar purposes in the same location.

Structure of Rate MA **9.10**

Hydro-Québec applies Rate M, described in Chapter 4, to the billing demand and energy up to 900 kilowatts and 390,000 kilowatthours per monthly period. Any excess is billed at:

\$37.855 per kilowatt and 24.692¢ per kilowatthour when the electricity is produced by a heavy diesel power plant, or

\$74.374 per kilowatt and 58.119¢ per kilowatthour in all other cases.

The energy prices are in effect until September 30, 2025. Thereafter, they will be revised by Hydro-Québec as specified in Article 9.11.

In the sole cases of customers whose contract power on April 1, 2006, exceeded 900 kilowatts, Rate M applies up to the available power stated in their contracts and to the corresponding quantity of energy.

The energy prices for Rate MA are revised by Hydro-Québec on October 1 of each year, using the following formulas:

$$\text{PLD} = A + \frac{B \times C}{D}$$

where

PLD = the price of energy applicable when electricity is generated by a heavy diesel power plant;

A = the operating and maintenance cost, 3.361¢ per kilowatthour;

B = the energy cost set for the reference year 2024, 20.039¢ per kilowatthour;

C = the average price of No. 6 diesel (1% S) for the New York area, expressed in Canadian dollars per barrel. This price is determined from data published in Platts Platform under "Fuel Oil" for the months of June, July and August of the current year or, failing which, from any other information that Hydro-Québec deems pertinent;

D = the average reference price of No. 6 diesel (1% S) for the New York area, expressed in Canadian dollars per barrel. This price is determined from data published in Platts Platform under "Fuel Oil" for the months of June, July and August 2023, and is \$102.54 per barrel.

$$\text{PLR} = E + \frac{F \times G}{H}$$

where

PLR = the price of energy applicable when electricity is generated by any other power plant;

E = the operating and maintenance cost, 3.361¢ per kilowatthour;

F = the energy cost set for the reference year 2006, 26.44¢ per kilowatthour;

- G = the average price of No. 1 diesel, for the Montréal area, expressed in Canadian cents per litre. This price is determined from data published in the Bloomberg Oil Buyer's Guide under "Bloomberg Canadian Terminal Prices – Rack Contract" for the months of June, July and August or, failing which, from any other information Hydro-Québec deems pertinent;
- H = the average reference price of No. 1 diesel, for the Montréal area, expressed in Canadian cents per litre. This price has been determined from data published in the Bloomberg Oil Buyer's Guide under "Bloomberg Canadian Terminal Prices – Rack Contract" for the months of June, July and August 2005, and is 61.51¢ per litre.

SECTION 3

NET METERING FOR CUSTOMER-GENERATORS – OPTION III (INTERIM RATE)

Application 9.12

The Net Metering Option described in this section applies to the Rate D, Rate DM, Rate DN or Rate G contract of a customer whose electrical installation is supplied by an off-grid system, except the Schefferville and Lac-Robertson systems, where the maximum power demand never exceeded 50 kilowatts during the 12 consecutive monthly periods ending at the end of the consumption period in question.

Definitions 9.13

In this section, the following definitions apply:

customer-generator: A customer who generates electricity at a facility they own and operate to satisfy all or part of their electricity needs.

electricity delivered: The electricity supplied by Hydro-Québec during a consumption period.

electricity injected: The electricity fed into the Hydro-Québec system by the customer-generator during a consumption period.

Sign-up procedure**9.14**

To sign up for this option, the customer must submit an application in writing to Hydro-Québec by completing the *Net Metering Enrollment Application* form available at www.hydroquebec.com.

Hydro-Québec will analyze the application, in particular the characteristics of the customer's self-generation facility, the reliability of their equipment and the anticipated system impact. It will then notify the customer in writing of its decision to accept or deny their request to connect their self-generation facility to the grid and sign up for this option.

Eligibility**9.15**

To be eligible for this option, the customer must meet the following conditions:

- a) Their maximum self-generation capacity must not exceed the lesser of:
 - 20 kilowatts in the case of a single-phase facility or 50 kilowatts in the case of a three-phase facility, or
 - the estimated maximum power demand for the contract;
- b) The electricity must be generated at a facility that is located at the same delivery point as the contract;
- c) The customer must use one or more of the following types of generation only:
 - wind power,
 - photovoltaic power,
 - hydroelectric power,
 - geothermal power for generating electricity,
 - bioenergy (biogas or forest biomass residue).

Sign-up date**9.16**

This option takes effect at the start of the first consumption period following installation of the appropriate metering equipment.

Surplus bank**9.17**

For each consumption period, the value of the electricity injected into the Hydro-Québec system by the customer-generator is credited to a surplus bank.

This value is equal to the number of kilowatthours injected multiplied by:

- 20.489¢ per kilowatthour when the electricity is produced by a heavy diesel power plant, or
- 39.772¢ per kilowatthour when the electricity is produced by a light diesel power plant, or
- 57.851¢ per kilowatthour when the electricity is produced by an arctic diesel power plant.

Any amount applied against the customer's electricity bill for the consumption period under way is deducted from the surplus bank, if there is a balance.

Billing**9.18**

The bill for each consumption period during which this option applies is established as follows:

- a) An initial amount for the electricity delivered is calculated based on the prices and conditions in effect for the applicable rate, taking into account, if applicable, the credit for supply applicable to domestic rates as described in Article 12.3;
- b) The minimum monthly bill is prorated according to the number of days in the consumption period. For a Rate D, Rate DM or Rate DN contract, the monthly minimum is the system access charge;
- c) If the result obtained in subparagraph a) is equal to the amount obtained in b), the bill is equal to this amount;
- d) If the result obtained in subparagraph a) is greater than that obtained in b), the result obtained in a) is reduced by the surplus bank balance, if any, up to the adjusted monthly minimum.

Surplus bank restrictions**9.19**

The surplus bank is reset to 0:

- a) at the start of the consumption period beginning on or after March 31 following the sign-up date established in accordance with Article 9.16 and every 24 months thereafter; or
- b) at the start of the consumption period beginning after a date selected by the customer that falls within the 24 months following the sign-up date established in accordance with Article 9.16 and every 24 months thereafter; or
- c) upon termination of this option.

The balance in the surplus bank may not be applied to a different contract.

Termination **9.20**

A customer who no longer wishes to benefit from this option must notify Hydro-Québec in writing.

The option ceases to apply at the end of the consumption period in which Hydro-Québec receives the written termination notification from the customer.

The customer is not eligible to sign up for this option once again until at least 12 consecutive months after the termination date.

A customer who wishes to sign up for this option once again must submit a new application to Hydro-Québec in accordance with the provisions of Article 9.14.

SECTION 4

INTERRUPTIBLE ELECTRICITY OPTION WITH ADVANCE NOTICE

Subsection 4.1 – General Provisions

Application **9.21**

The Interruptible Electricity Option with Advance Notice applies to the general-rate contract of a customer served by an off-grid system who can curtail power at Hydro-Québec's request between November 1 of one year and March 31 of the next year, inclusive, for system management purposes.

In this section, the following definitions apply:

average hourly power: The value in kilowatts of the average of the real power demands of four 15-minute integration periods.

effective interruptible power: For each hour of interruption, the difference between:

- a) the average of the 5 highest average hourly power values during the corresponding useable hour on weekdays, if the interruption takes place during the week, or on weekends, if the interruption takes place on the weekend, of the consumption period in question; and
- b) the average hourly power.

Effective interruptible power cannot be negative.

interruptible power: The amount of real power the customer agrees not to use during certain periods, at the request of Hydro-Québec.

interruption period: The block of interruption hours indicated in the notice sent by Hydro-Québec to the customer in accordance with Article 9.27.

useable hours: All hours in the consumption period in question, excluding the following:

- a) December 24, 25, 26 and 31, January 1 and 2, as well as Good Friday, Easter Saturday, Easter Sunday and Easter Monday when the latter four days fall within the winter period;
- b) days when the customer curtails their consumption in accordance with this section.

By June 1 of each year, Hydro-Québec sets the minimum and maximum amounts of interruptible power it plans to avail itself of under this option for each off-grid system, based on system management requirements. Hydro-Québec also sets a minimum amount of interruptible power per customer.

If Hydro-Québec does not specify any amounts for a given off-grid system, it shall be deemed that no interruptible power is required for that system.

Sign-up procedure **9.24**

The customer must submit an application to Hydro-Québec in writing before October 1, indicating the interruptible power to which they wish to commit. Subject to the maximum and minimum quantities set under Article 9.23, Hydro-Québec has 30 days to send its written decision as to whether or not it accepts the power proposed by the customer.

Hydro-Québec may refuse the power offered by a customer whose previous commitment was terminated under the fourth paragraph of Article 9.31.

Subsection 4.2 – Conditions of Application and Credits

Commitment **9.25**

The customer's initial commitment is for a period of 2 years starting on October 1 and is renewed thereafter for a period of 1 year on October 1 of each year. The customer or Hydro-Québec may, however, choose not to renew the commitment, conditional on giving prior notice to that effect at least 1 year before the end of the commitment or of any of its renewals.

The customer must curtail power at Hydro-Québec's request, according to the conditions set out in this section.

Conditions applicable to interruptions **9.26**

Interruptions under this section must meet the following conditions:

Period during which an interruption can occur:
November 1 to March 31, inclusive

Advance notice (hours): 2

Maximum number of interruptions per day: 2

Minimum duration of interruptions (hours): 4

Minimum interval between 2 interruptions
in the same day (hours): 2

Maximum duration of interruptions between
November 1 and March 31, inclusive (hours): 100

Notice of interruption 9.27

Hydro-Québec notifies the representatives of the selected customers, by telephone or by any other means agreed upon by the parties, indicating the starting and end time of the interruption period. If no representatives can be reached, the customer is deemed to have refused to curtail power for that interruption period.

Amount of credits 9.28

The monthly credits applicable for the period from November 1 to March 31, inclusive, are as follows:

Fixed credit:

\$7.231 per kilowatt of interruptible power.

Variable credit:

The variable credit is calculated using the formula set forth in Article 9.29 and applies to each kilowatthour of energy associated with the effective interruptible power for each hour of interruption.

Calculation of variable credit 9.29

The variable credit is calculated by Hydro-Québec on October 1 of each year, using the following formula:

$$CV = A + \frac{B \times C}{D}$$

where

CV = the variable credit applicable;

A = the operating and maintenance cost,
3.327¢ per kilowatthour;

B = the energy cost for the reference year 2012:
54.50¢ per kilowatthour when the customer
is located north of the 53rd parallel

or

35.50¢ per kilowatthour when the customer is located south of the 53rd parallel;

- C = the average price of No. 1 diesel, for the Montréal area, expressed in Canadian cents per litre. This price is determined from data published in the Bloomberg Oil Buyer's Guide under "Bloomberg Canadian Terminal Prices – Rack Contract" for the months of June, July and August or, failing which, from any other information Hydro-Québec deems pertinent;
- D = the average reference price of No. 1 diesel, for the Montréal area, expressed in Canadian cents per litre. This price has been determined from data published in the Bloomberg Oil Buyer's Guide under "Bloomberg Canadian Terminal Prices – Rack Contract" for the months of June, July and August 2012, and is 87.66¢ per litre.

Credits applicable to the contract **9.30**

The sum of the variable credit, calculated for each hour of interruption, and the fixed credit is applied to the bill for the consumption period in question.

Failure to curtail **9.31**

A failure to curtail is noted when the effective interruptible power does not reach 75% of the interruptible power.

No variable credit will be granted for the hour during which a failure to curtail is noted.

When a failure to curtail is noted, Hydro-Québec is authorized to interrupt the supply of electricity.

Hydro-Québec may terminate the commitment of a customer when a failure to curtail is noted at least 3 times during that commitment.

SECTION 5

INTERRUPTIBLE ELECTRICITY OPTION WITHOUT ADVANCE NOTICE

Subsection 5.1 – General Provisions

Application 9.32

The Interruptible Electricity Option Without Advance Notice applies to the general-rate contract of a customer served by an off-grid system who can commit to Hydro-Québec to curtail all of its power for system management purposes.

Definitions 9.33

In this section, the following definitions apply:

interruptible power: An amount of power that is equal to the maximum power demand during a consumption period included in the last 12 consecutive monthly periods.

interruption period: A block of interruption hours during which Hydro-Québec decides to interrupt supply to the customer in accordance with Article 9.37.

Limitation 9.34

By June 1 of each year, Hydro-Québec sets the minimum and maximum amounts of interruptible power it plans to avail itself of under this option for each off-grid system, based on system management requirements. Hydro-Québec also sets a minimum amount of interruptible power per customer.

If Hydro-Québec does not specify any amounts for a given off-grid system, it shall be deemed that no interruptible power is required for that system.

Sign-up procedure 9.35

The customer must submit an application in writing to Hydro-Québec before October 1, indicating the interruptible power to which they wish to commit. Subject to the maximum and minimum quantities

set under Article 9.34, Hydro-Québec has 30 days to send its written decision as to whether or not it accepts the power proposed by the customer.

Subsection 5.2 – Conditions of Application and Credits

Commitment 9.36

The customer's initial commitment is for a period of 2 years starting on October 1 and is renewed thereafter for a period of 1 year on October 1 of each year.

The customer or Hydro-Québec may, however, choose not to renew the commitment, conditional on giving prior notice to that effect at least 1 year before the end of the commitment or of any of its renewals.

The customer agrees that all of their power may be curtailed without notice at any time by Hydro-Québec.

Conditions applicable to interruptions 9.37

Interruptions carried out by Hydro-Québec under this section, notably for purposes of system management, can occur any time and without limitation as to their number. However, the maximum duration of any given interruption period is 30 days. The interruption may be extended beyond this period only by an agreement between Hydro-Québec and the customer.

Hydro-Québec confirms the start and end dates and times of the interruption period to the representatives of the selected customers.

Amount of credit 9.38

The credit applicable is as follows:

- \$1.447 per kilowatt of interruptible power for each hour of interruption, up to a maximum of \$40.171 per kilowatt of interruptible power for each 168-hour period (7 days) within a given interruption period.

Credit applicable to the contract 9.39

The credit calculated in accordance with Article 9.38 is applied to the bill for the consumption period in question.

SECTION 6

DUAL-ENERGY DOMESTIC RATE - INUKJUAK SYSTEM

Application 9.40

This rate applies to a Rate DN-eligible contract when the customer is served by the Inukjuak off-grid system and uses a dual-energy system that meets the conditions stipulated in Article 9.42.

Definition 9.41

In this section, the following definitions applies:

dual-energy system: A central system used for the heating of space, or space and water, and designed in such a way that electricity can be used as the main heating source and a fuel as the auxiliary source.

Eligibility 9.42

For the contract to be eligible for this rate, the following conditions must be met:

- a) The capacity of the dual-energy system, in both electrical and fuel mode, must be sufficient to heat the premises in question. The energy sources of the dual-energy system must not be used simultaneously;
 - b) The dual-energy system must be equipped with a switch remotely controlled by Hydro-Québec and permitting transfer from one source of energy to the other at all times;
 - c) The customer must not use any device other than the dual-energy system to heat the premises in question.
-

Sign-up procedure 9.43

To sign up for this rate, the customer must submit an application to Hydro-Québec in writing.

Thereafter, the customer must notify Hydro-Québec of any change made to the dual-energy system or of the addition of any other heating device that would render the contract ineligible for this rate.

Structure of the Dual-Energy Domestic Rate – Inukjuak System **9.44**

The structure of this rate for a weekly contract is as follows:

- 46.154¢ system access charge for each day in the consumption period, times the multiplier
plus
- 6.905¢ per kilowatthour for energy consumed, up to the product of 40 kilowatthours, the number of days in the consumption period and the multiplier, and
- 20.567¢ per kilowatthour for the remaining consumption
plus a monthly charge of
- \$7.054 per kilowatt of billing demand in excess of the base billing demand.

Prices are set on an annual basis as specified in Article 9.46.

If applicable, the credit for supply, as described in Article 12.3, applies.

Multiplier **9.45**

For a contract at this rate, the multiplier is 1, unless the contract was eligible for Rate DM on May 31, 2009.

Where the multiplier is not 1, it is determined as follows:

a) Apartment building or community residence consisting of dwellings:

Number of dwellings in the apartment building or community residence.

b) Community residence consisting of dwellings and rooms:

Number of dwellings in the community residence

plus

1 for the first 9 rooms

plus

1 for each additional room.

c) Rooming house or community residence with 10 rooms or more:

1 for the first 9 rooms

plus

1 for each additional room.

Determination of prices under the Dual-Energy Domestic Rate – Inukjuak System 9.46

The system access charge, first-tier energy price and demand charge at this rate are respectively equal to the system access charge, first-tier energy price and demand charge at Rate DN specified in Article 9.2.

The second-tier energy price is determined as follows:

$$P_{2e} = \frac{(A + B)}{2} \times \frac{C}{D \times E}$$

where

P_{2e} = the second-tier energy price in effect as of December 1, 2022;

A = the average price of oil in Nunavik for the 2021–2022 season published by the Régie de l'énergie in the *Relevé hebdomadaire des prix du mazout léger* on the first week of March 2022. This price is expressed in cents per litre and excludes federal and provincial sales taxes (GST and QST);

B = the average price of oil in Nunavik for the 2021–2022 season published by the Régie de l'énergie in the *Relevé hebdomadaire des prix du mazout léger* on the first week of March 2022. This price is expressed in cents per litre and excludes federal and provincial sales taxes (GST and QST);

C = the calorific value of electricity, i.e., 3.6 megajoules per kilowatthour;

- D = the calorific value of oil, i.e., 37.5 megajoules per litre;
- E = the efficiency rate of the dual-energy system in fuel mode, which is equal to 75%.

The result is multiplied by a reference index, which is established as follows:

- the reference index is set at 1.0 on December 1, 2022;
- it is increased on April 1 of each year, according to the average year-over-year variation of the Consumer Price Index in Québec, on a calendar year basis.

These increases are cumulative.

Billing demand **9.47**

The billing demand at this rate is equal to the maximum power demand during the consumption period in question, but is never less than the minimum billing demand as defined in Article 9.48.

Minimum billing demand **9.48**

The minimum billing demand for any given consumption period is equal to 65% of the maximum power demand during a consumption period that falls wholly within the winter period included in the 12 consecutive monthly periods ending at the end of the consumption period in question.

Base billing demand **9.49**

The base billing demand is the higher of the following values:

- a) 50 kilowatts, or
- b) 4 kilowatts times the multiplier.

Non-compliance with conditions **9.50**

If the electricity delivered is used for space heating during a period when the dual-energy system is supposed

to be operating in fuel mode, the system access charge as well as the price and method for calculating billing demand specified in this rate will continue to apply, but all the energy consumed will be billed at 47.054¢ per kilowatthour, namely the second-tier energy price at Rate DN specified in Article 9.2.

Hydro-Québec may choose not to apply this provision if it is given prior notice by the customer that the non-compliance resulted from an exceptional and unforeseeable situation. The customer must then undertake to correct this situation as soon as possible.

Provision applicable to customers benefiting from the Efficient Energy Use Program **9.51**

Customers benefiting from the Efficient Energy Use Program on November 30, 2022, will be entitled to a rebate on the second-tier energy price until March 31, 2029.

For these customers, the second-tier energy price will be multiplied by:

- 30% starting on December 1, 2022;
- 40% starting on April 1, 2023;
- 50% starting on April 1, 2024;
- 60% starting on April 1, 2025;
- 70% starting on April 1, 2026;
- 80% starting on April 1, 2027;
- 90% starting on April 1, 2028.

Starting on April 1, 2029, the second-tier energy price will be equal to the price set out in Article 9.44 of this rate.

CHAPTER 10

FLAT RATE FOR GENERAL USE

Application 10.1

Flat Rate F, described in this chapter, applies to a contract for general use when Hydro-Québec decides not to meter consumption.

Conditions of application 10.2

For all Rate F contracts, the customer must provide all the information Hydro-Québec deems necessary to determine the billing demand per delivery point.

The customer must also notify Hydro-Québec of any change in the loads supplied under a Rate F contract. In the event of such a change, the revised billing demand per delivery point shall take effect at the beginning of the consumption period during which Hydro-Québec receives the customer's written notice.

The customer may terminate the Rate F contract at any time, subject to the payment of the price applicable for a minimum of 30 days.

Structure of Rate F 10.3

The structure of Rate F is as follows:

\$53.947 per kilowatt of billing demand per delivery point per monthly period.

Billing 10.4

The customer's bill for each consumption period is established as follows:

- a) For each delivery point, the Rate F price in effect is multiplied by the billing demand per delivery point;
- b) The amounts obtained in subparagraph a) above are added up.

As a rule, the billing demand per delivery point at Rate F is determined according to the installed capacity in kilowatts, as follows:

- a) If the electricity delivered supplies power to emergency equipment such as fire pumps, surface-water pumps, National Defence sirens or other similar apparatus used only in case of disaster or fortuitous event, the billing demand is equal to 25% of the installed capacity in kilowatts, but cannot be less than 1 kilowatt;
- b) If the electricity delivered supplies power to any other load, the billing demand is equal to the installed capacity in kilowatts, subject to subparagraph c) below; however, it cannot be less than 0.2 kilowatts for single-phase delivery or 0.6 kilowatts for three-phase delivery;
- c) If the electricity delivered supplies power to a system with a device for recharging batteries that are used only in case of outages on the Hydro-Québec system, the power used for the battery recharger is not taken into account in determining the billing demand.

If it deems appropriate, Hydro-Québec may determine the billing demand per delivery point using metering tests or a maximum-demand meter that it installs for this purpose. If there is a maximum-demand meter, the billing demand per delivery point is equal to the highest maximum power demand since the date of connection, but it cannot be less than the minimum billing demand.

CHAPTER 11

PUBLIC AND SENTINEL LIGHTING RATES

SECTION 1

PUBLIC LIGHTING RATES

Subsection 1.1 – General Provisions

Application 11.1

This section covers the rates and conditions for the supply by Hydro-Québec to the federal and provincial governments and municipalities, or to any person duly authorized by them, of electricity for public lighting and, where applicable, other related services.

Customer charged for unusual costs 11.2

When Hydro-Québec must cover the unusual costs mentioned in articles 11.11 and 11.12, it requires full reimbursement of these costs from the customer and may impose any other condition it deems necessary before undertaking the work.

The additional operating and maintenance costs are determined in current dollars for a period of 15 years; the present value is calculated at the prospective cost of capital in effect as approved by the Régie de l'énergie.

Reimbursement by the customer of the unusual costs gives the customer no right of ownership over the installations for which these costs were incurred.

Subsection 1.2 – Rate for General Public Lighting Service

Description of service 11.3

The general public lighting service comprises the supply of electricity for public lighting installations as well as, in some cases, the rental of space on poles in the Hydro-Québec distribution system for the attachment of the customer's luminaires.

For municipalities with luminaires not equipped with individual on/off controls, this service also comprises the supply and operation of power-supply and control circuits used solely for the operation of the luminaires.

The rate for general public lighting service applies only to luminaires and signalling devices that are connected to public lighting circuits whose energy consumption is metered. If other devices or equipment are connected to the public lighting circuits or if energy consumption is not metered, all energy delivered to this delivery point is subject to Rate F, described in Chapter 10.

Rate	11.4
-------------	-------------

The rate for general public lighting service is 12.487¢ per kilowatthour.

Determination of consumption	11.5
-------------------------------------	-------------

As a rule, the energy consumption is not metered. However, Hydro-Québec may meter the consumption if it deems appropriate.

When it is not metered, the energy consumption is the product of the connected load and 345 hours of monthly utilization.

In the case of tunnels or other facilities that remain lighted 24 hours a day, the energy consumption is the product of the connected load and 720 hours of monthly utilization.

The customer must provide all the information Hydro-Québec deems necessary to determine the connected load. In doing so, Hydro-Québec takes into account the rated power of the bulb and accessories.

The customer must also notify Hydro-Québec of any change in the public lighting circuits. In the event of such a change, the revised connected load shall take effect at the beginning of the consumption period during which Hydro-Québec receives the customer's written notice.

Costs for related services 11.6

When Hydro-Québec incurs costs for installation, replacement or removal of a luminaire on a pole in its distribution system, or if it provides any other service related to general public lighting service, it requires full reimbursement of those costs from the customer.

Minimum term of contract 11.7

In cases where the general public lighting service covers only the supply of electricity, the minimum term of a contract is 1 month. In other cases, the minimum term of a contract is 1 year.

**Subsection 1.3 –
Rate for Complete Public Lighting Service**

Description of service 11.8

The complete public lighting service comprises the supply, operation and maintenance of luminaires that conform to Hydro-Québec's standards and approved models, and the supply of electricity to them. These luminaires are mounted on Hydro-Québec's distribution poles or, in the case of distribution lines not along roadways, on poles used exclusively for public lighting.

Only municipalities may obtain installation of new luminaires used for complete public lighting service; Hydro-Québec then installs standard luminaires. However, this article shall not be interpreted as an obligation of Hydro-Québec to provide this service.

Minimum term of contract 11.9

Complete public lighting service is available only under an annual contract. Moreover, a new luminaire must remain in service for at least 5 years. A customer who asks Hydro-Québec to remove or replace a luminaire before the end of this period must pay the cost of this modification, unless it is occasioned by the malfunctioning of the luminaire.

Rates for standard luminaires **11.10**

The following monthly rates apply to standard luminaires used for complete public lighting service:

a) High-pressure sodium-vapour luminaires

<u>Rating of luminaire</u>	<u>Rate per luminaire</u>
5,000 lumens (or 70 W)	\$27.118
8,500 lumens (or 100 W)	\$29.542
14,400 lumens (or 150 W)	\$31.891
22,000 lumens (or 250 W)	\$37.423

b) Light-emitting diode luminaires

<u>Rating of luminaire</u>	<u>Rate per luminaire</u>
6,100 lumens (or 65 W)	\$27.949

Poles **11.11**

The rates for complete public lighting service apply to installations that are supplied by overhead circuits and mounted on wood poles. Any other kind of installation is subject to the provisions of Article 11.2.

Costs for installations and related services **11.12**

When Hydro-Québec provides, at the customer's request, special installations or services that are not included in the complete public lighting service, the customer must fully reimburse the costs so incurred by Hydro-Québec. These costs, determined in accordance with Article 11.2, are payable within 21 days of the billing date.

SECTION 2

SENTINEL LIGHTING RATES

Application **11.13**

Sentinel lighting service comprises the supply, operation and powering of photoelectric-cell luminaires of the Sentinel type. These luminaires are the property of Hydro-Québec and are used for outdoor lighting, but not for public lighting.

This service is provided only for annual contracts dated prior to April 1, 2007, and will no longer be available in the case of luminaires that have to be replaced.

Sentinel lighting with poles supplied **11.14**

When Hydro-Québec installs a pole used exclusively for Sentinel lighting, or when it rents such a pole from a third party, the monthly rates are as follows:

Rating of luminaire	Rate per luminaire
7,000 lumens (or 175 W)	\$50.150
20,000 lumens (or 400 W)	\$66.095

Sentinel lighting with no poles supplied **11.15**

When Hydro-Québec does not supply or rent the poles to be used exclusively for Sentinel lighting, the monthly rates are as follows:

Rating of luminaire	Rate per luminaire
7,000 lumens (or 175 W)	\$39.410
20,000 lumens (or 400 W)	\$56.803

CHAPTER 12

SUPPLEMENTARY PROVISIONS

SECTION 1

GENERAL PROVISIONS

Choice of rate 12.1

Unless otherwise provided for in these *Rates*:

- a) Any customer eligible for more than one general rate may choose the rate they prefer when the request for electricity service is made;
- b) In the case of an annual contract, the customer may submit a request in writing for a change of rate during the term of the contract. Such a change may not be made before expiration of a 12-month period after a previous change made in accordance with this subparagraph.

The change of rate takes effect, at the customer's discretion, either at the beginning of the consumption period during which Hydro-Québec receives the written request, at the beginning of the previous consumption period or at the beginning of any subsequent consumption period;

- c) In the case of a new annual contract and only during the first 12 monthly periods, the customer may opt once for another rate for which they are eligible.

The change of rate takes effect, at the customer's discretion, either at the beginning of the contract, at the beginning of any one of the consumption periods preceding the request, or at the beginning of any subsequent consumption period.

To obtain a change of rate under this subparagraph, the customer must submit a request to Hydro-Québec in writing before the end of the 14th monthly period following the date of the beginning of the contract.

- d) In the case of a short-term contract, the customer may, only once, opt for another short-term contract for which they are eligible.

The change of rate takes effect, at the customer's discretion, either at the beginning of the contract, at the beginning of any one of the consumption periods preceding the request, or at the beginning of any subsequent consumption period.

To obtain a change of rate under this subparagraph, the customer must submit a request to Hydro-Québec in writing before the end of the second monthly period following the termination date of the contract.

If the customer retroactively changes the short-term contract to an annual contract, the change of rate is taken into account in the application of subparagraph c) of this article.

The provisions of this article do not apply to changes from Rate M to Rate L or vice versa.

Credit for supply at medium or high voltage 12.2

When Hydro-Québec supplies electricity at medium or high voltage and the customer utilizes it at this voltage or transforms it themselves at no cost to Hydro-Québec, this customer is entitled to a monthly credit in dollars per kilowatt on the demand charge applicable to the contract. The credits, determined according to the supply voltage, are as follows:

Nominal voltage between phases equal to or greater than	Monthly credit \$ per kilowatt
5 kV, but less than 15 kV	0.6869
15 kV, but less than 50 kV	1.1008
50 kV, but less than 80 kV	2.4576
80 kV, but less than 170 kV	3.0063
170 kV	3.9726

No credit is granted for short-term contracts with a term of less than 30 days or on the minimum monthly amount billed under rates G, G9, GD, Flex G, Flex G9, M, Flex M and CB.

Credit for supply applicable to domestic rates 12.3

When Hydro-Québec supplies electricity at a nominal voltage between phases equal to or greater than 5 kV for a contract at Rate D, Rate DM, Rate DT, Rate Flex D

or Time-of-Use Rate D and the customer uses it at this voltage or transforms it themselves at no cost to Hydro-Québec, this customer is entitled, for this contract, to a credit of 0.2736¢ per kilowatthour on the price of all energy billed.

Adjustment for transformation losses **12.4**

To take account of transformation losses, Hydro-Québec grants a monthly discount of 19.930¢ on the demand charge when:

- a) the metering point of the electricity is at the supply voltage, and the latter is 5 kV or more; or
- b) the metering point is located on the supply side of the Hydro-Québec equipment that transform electricity from a voltage of 5 kV or more to the supply voltage furnished by contract to the customer.

Power factor improvement **12.5**

If the customer installs capacitors, synchronous motors or synchronous condensers that reduce the maximum apparent power demand, Hydro-Québec may, at the customer's request and in regard to the annual contract thereby affected, adjust the minimum billing demand accordingly.

This adjustment applies as of the first consumption period in which the meter reading indicates a permanent and significant improvement in the ratio of the maximum real power demand to the maximum apparent power demand, or as of any subsequent consumption period, at the customer's discretion.

The adjustment is made by reducing the minimum billing demand by the number of kilowatts of maximum power demand corresponding to the effective improvement of said ratio. However, such reduction must not result in a decrease in the minimum billing demand based on a real power demand recorded within the last 12 monthly periods.

This adjustment does not alter the period of 12 monthly periods available to the customer for reducing the minimum billing demand of a Rate L contract.

SECTION 2

RESTRICTIONS

Restriction concerning contracts 12.6

Hydro-Québec may deny a request for a rate change or contract termination if the sole purpose of the request is to avoid the application of a condition provided for in these *Rates*.

Restriction concerning large-power contracts and special contracts 12.7

Hydro-Québec is not obliged to enter into a contract for any new load of more than 5 megawatts or to accede to any request to supply an additional load of more than 5 megawatts or any request from a customer who has a special contract.

Restriction concerning short-term contracts 12.8

Hydro-Québec is not obliged to enter into any short-term contract for a power demand of more than 100 kilowatts.

Adaptation of rates to term of contract 12.9

a) A customer may terminate their annual small-power or medium-power contract before the end of the first 12 consecutive monthly periods during which electricity has been delivered to the premises.

Unless another customer assumes responsibility for a contract for the same premises starting on the contract end date, the customer must then pay the lesser of:

- i. the electricity bill calculated according to the rate provisions for short-term contracts, retroactive to the beginning of the contract, or
- ii. the electricity bill calculated according to the rate provisions for annual contracts, until the end of the 12 consecutive monthly periods.

b) A customer may retroactively ask Hydro-Québec to change their short-term small-power or medium-power contract to an annual contract if they have

taken delivery of electricity for at least 12 consecutive monthly periods. This change then takes effect at the beginning of the contract.

Available power**12.10**

The provisions of these *Rates* may in no case be interpreted as allowing the customer to exceed the available power stipulated in their contract.

SECTION 3

BILLING CONDITIONS

Adjustment of rates to consumption periods**12.11**

The monthly rates described in these *Rates* are applied without adjustment when the consumption period is 30 consecutive days, or 720 consecutive hours in the case of large-power rates and options.

For consumption periods of a different duration, the monthly rates are adjusted in proportion to the number of days or hours in the consumption period, as the case may be, as follows:

- a) Each of the following components of the monthly rate is divided by 30 days or by 720 hours, as the case may be:
- the system access charge,
 - the demand charge,
 - the number of kilowatthours or hours of use included, if applicable, in each rate tier,
 - the minimum monthly bill,
 - the optimization charge,
 - the credit for supply at medium or high voltage, as described in Article 12.2,
 - the adjustment for transformation losses, as described in Article 12.4,
 - any increase in charges provided for under these *Rates*.

- b) The resulting quantities are multiplied by the number of days or hours in the consumption period, as the case may be.

SECTION 4

PROVISIONS REGARDING THESE *RATES*

Amendment **12.12**

The provisions of these *Rates* may be amended at any time with the approval of the Régie de l'énergie.

Replacement **12.13**

The *Rates* effective April 1, 2024, are replaced as of the effective date of these new *Rates*.

Effective date **12.14**

These *Rates* become effective on April 1, 2025. The rates herein shall apply to electricity consumed and services provided as of that date, until they are amended or replaced.

If a consumption period straddles November 30, 2024, or April 1, 2025, it is divided into two sub-periods for billing purposes. The electricity to be billed at the previous rates is based on the meter reading taken by Hydro-Québec on November 30, 2024, or March 31, 2025, as the case may be, whereas the electricity to be billed at the rates herein is based on the reading taken at the end of the consumption period. If Hydro-Québec does not take a meter reading on the relevant date, the electricity to be billed at the previous rates and the rates herein is determined exclusively on a prorata basis according to the number of days prior to December 1, 2024, or April 1, 2025, and the number of days between that date and the end of the consumption period.

Services to be billed at the previous rates or at the rates herein are determined exclusively on a prorata basis according to the number of days prior to December 1, 2024, or April 1, 2025, as the case may be, and the number of days between the relevant date and the end of the consumption period, unless the service was rendered at a specific date. If such is the case, the service is billed at the rate applicable on the date on which it was provided.

**Contracts entered into before
the effective date of these *Rates***

12.15

The rates and conditions stipulated in contracts entered into by Hydro-Québec or by one of its subsidiaries before the effective date of these *Rates* remain in effect until the contracts expire, but no automatic renewal clause shall apply unless the parties agree otherwise.

These *Rates*, as of their effective date, apply to all contracts which give Hydro-Québec termination or modification rights or which provide for amendment of the *Rates*.

When notice must be given before Hydro-Québec can terminate a contract or amend the rate and conditions therein, these *Rates* shall apply as soon as the notice period has expired.

CHAPTER 13

SIGNATURE SERVICE RATE

SECTION 1

SIGNATURE SERVICE

Application	13.1
--------------------	-------------

This section describes the prices and conditions that apply to the Signature service, which Hydro-Québec offers to medium- and large-power customers.

Description of service	13.2
-------------------------------	-------------

The Signature service consists of a basic service and 2 complementary options.

Basic service consists of the following offerings:

- a) automatic notification of every electrical event that results in loss of customer load. Notices are sent by email to the customer's designated representative, regardless of time of day or day of the week;
- b) a weekly power quality report as well as a log and analysis of voltage dips;
- c) continuous measurement of power quality using instruments supplied by Hydro-Québec.

The complementary options are as follows:

- a) continuous tracking of harmonics;
- b) an annual review of power quality indicators and a load behaviour analysis.

Basic service price	13.3
----------------------------	-------------

An annual charge of \$6,327.443 applies to each delivery point.

Price for options	13.4
--------------------------	-------------

The following annual charges apply to the complementary options for each contract:

- a) continuous tracking of harmonics: \$6,026.135;
- b) annual review of power quality indicators and load behaviour analysis: \$6,026.135.

Eligibility **13.5**

In order to be eligible, the customer must:

- a) provide access to their site for the installation and maintenance of the instruments required for purposes of the Signature service;
- b) have the appropriate computer equipment and an Internet connection;
- c) be receiving three-phase electricity.

Sign-up procedure **13.6**

To sign up for the Signature service, the customer must submit a request to Hydro-Québec in writing.

The customer must also sign an agreement with Hydro-Québec in which the customer undertakes to sign up for the service for an initial term of 12 consecutive months. If the customer terminates their commitment before the end of the initial 12-month term, the customer will be obliged to pay the applicable fees for the duration of this initial term.

At the end of the initial 12-month term, the agreement continues to apply for at least 1 consumption period. The agreement is renewed each consumption period, unless it is terminated by the customer or Hydro-Québec.

The customer or Hydro-Québec may terminate the agreement by written notice at least 1 consumption period in advance. Upon termination of the agreement, Hydro-Québec will remove the instruments installed for purposes of the Signature service.

Sign-up date **13.7**

Provision of the service is subject to the signing of an agreement between the customer and Hydro-Québec, as set forth in Article 13.6. The service charges apply as of the first complete consumption period following the date on which the service is made available to the customer.

Responsibility**13.8**

Hydro-Québec shall not be held responsible for the accuracy of information, data and reports provided under this service, for their availability, or for the decisions a customer may make based thereon.
