Message from the President and Chief Executive Officer

Our times are marked by the need to fight climate change—and with that, the realization that we must phase out fossil fuels—but also by legitimate expectations on the part of all Quebecers in terms of economic development. Our clean and renewable energy is a major asset. Used efficiently, it has the power to secure a prosperous and sustainable future in a decarbonized Québec.

This is precisely the spirit informing the development of Hydro-Québec's [Action Plan 2035 – Towards a Decarbonized and Prosperous Québec](#), which aims to reduce greenhouse gas emissions while meeting the anticipated growth in electricity demand brought about by the energy transition—all while improving the quality of the services it delivers to customers.

Work on these fronts is already well underway. Our access to renewable, low-carbon energy sources positions us to play a key role in the development of a sustainable economy. The present plan attests to our commitment to fight climate change and conserve biodiversity in our operations and undertakings.

Achieving these aims will involve working closely with local communities. And it will only be possible with the participation of Indigenous communities, with whom we have launched an economic reconciliation process to ensure they receive a fair share of the benefits from energy development.

As a United Nations Global Compact signatory, we are guided by the principles of sustainable development in the areas of human rights, labor standards, environmental protection and the fight against corruption. The *Sustainable Development Plan 2024–2028* constitutes our formal pledge to integrate these fundamental principles into our development strategies, business practices and management processes.

What drives us above all is the desire to build a sustainable and responsible tomorrow for future generations of Quebecers. In this sense, our contribution to the collective wealth has never been so valuable.

Michael Sabia

Hydro-Québec at a glance

OUR MISSION

We deliver reliable electric power and high-quality services tailored to our customers' needs at competitive prices. By developing clean, renewable energy sources, we contribute to Québec's collective wealth and play a central role in the emergence of a green, sustainable economy.

As recognized leaders in hydropower and large transmission systems, we help neighboring markets reduce their carbon footprint by leveraging the attributes of our energy.

Firm believers in the power of innovation, we develop state-of-the-art solutions and share our expertise to help decarbonize the economy and optimize energy use.

KEY FIGURES LINKED TO OUR OPERATIONS IN QUÉBEC (2023)

99.6%

of electricity derived from renewable sources for customers supplied by Hydro-Québec's main grid

Installed capacity of

37,436 MW

62 hydropower generating stations (36,885 MW)
23 thermal generating stations (541 MW)
2 photovoltaic generating stations (10 MW)

34,922 km

of transmission lines

228,568 km

of distribution lines

\$4.7B

in contributions to Québec government revenue

\$20.6M

in donations and sponsorships

\$4.9B

of investments made in Québec

25 Mt CO₂ eq.

of GHG emissions avoided thanks to the electrification presented in the *Action Plan 2035*

Action Plan 2035 – Towards a Decarbonized and Prosperous Québec

In the face of the climate crisis, all Quebecers must rally to accelerate the energy transition and ensure a sustainable future. The need to meet these imperatives while offering a more streamlined, more reliable and affordable electricity service led to the development of Hydro-Québec's *Action Plan 2035 – Towards a Decarbonized and Prosperous Québec*, whose clear and ambitious initiatives focus on five priorities:

1. Improve service quality.
2. Help our customers make better use of electricity.
3. Increase our power generation capacity.
4. Partner with Indigenous communities.
5. Become an agile, innovative and transparent organization.

Why the urgency? Consider this: though our hydropower generation gives us a head start in the global race toward decarbonization, nearly 50% of local energy comes from fossil fuels that emit greenhouse gases (GHGs). Achieving the net-zero emissions target that Québec has set itself for 2050 will involve gradually replacing these polluting sources with clean and renewable energy—an objective that implies a major electrification drive, primarily for transportation, buildings and industry. Naturally, this will bring about a significant spike in electricity demand. Indeed, we predict that consumption in Québec will double by 2050.

While 75% of the additional 8,000 to 9,000 MW expected to be needed by 2035 will be linked to decarbonization, the society-wide endeavor that is the energy transition is also an excellent opportunity to generate wealth, as new industries arising from the transition stimulate entrepreneurship and create jobs in promising sectors across Québec. In short, the three pillars of sustainable development—the environment, the economy and society—are at the heart of the Action Plan 2035.

Sustainability governance

Hydro-Québec is a sustainable development pioneer. Already in 1973, well before the concept had even been given a name, we were applying sustainability principles to our many operations as we set about building structures and frameworks to support our aims.

Sustainability governance is overseen by our Board of Directors, supported by its Governance and Social Responsibility Committee, whose members are independent directors. Hydro-Québec's President and CEO attends its meetings as a guest. The committee examines an entire array of questions through the lens of sustainability, from social acceptability to communications, the environment, governance and ethics, community and Indigenous relations, and workplace safety.

Hydro-Québec's management committee follows up on the decisions made by the Governance and Social Responsibility Committee, ensuring that company guidelines and actions align with the expectations of the government. For example, it mobilizes all the teams responsible for the design and implementation of strategies aimed at securing social acceptability for Hydro-Québec's projects and operations. It also oversees the realization of the Sustainable Development Plan to ensure that employees across the company consider environmental, social and governance issues, as well as the production of the Sustainability Report, which is published annually.

Sustainable Development Plan 2024–2028

The *Sustainable Development Plan 2024–2028*¹ is the result of extensive consultation with internal and, in some cases, external stakeholders along with an in-depth review of best practices.

It goes without saying that the commitments outlined in the pages that follow support the energy transition. Corresponding to nine distinct themes, they will allow us to concretely integrate sustainability into the full range of our operations and, more broadly, contribute to decarbonizing Québec.

These commitments and actions also echo the priorities of the *Action Plan 2035*. For example:

- Major investment in strengthening grid reliability and climate change resilience will cut the number and duration of power outages, thereby improving service quality.
- Promoting more responsible electricity use among our customers while boosting our output of clean and renewable energy will contribute significantly to Québec's decarbonization.

- Infrastructure projects that align with sustainable development principles—particularly with regard to biodiversity, the long-term operability of our facilities, working with local communities and partnering with Indigenous communities—will improve living conditions across Québec and secure a sustainable energy supply for generations to come.
- Hiring more people from diverse backgrounds, including Indigenous communities, while continually improving our workplace health and safety practices will help us build a safer, healthier and more inclusive organization.

For each commitment in the *Sustainable Development Plan 2024–2028*, we indicate how it contributes to the 17 Sustainable Development Goals put forth by the [United Nations Development Programme](#), the United Nation's lead agency on international development. We also specify the Government Sustainable Development Strategy subgoal corresponding to each action item in the Plan.

1. From January 1, 2024 to December 31, 2027, in accordance with Hydro-Québec's fiscal year.

Responsible procurement

Reinforce our responsible supply chain by implementing sustainable solutions that meet environmental, social and governance (ESG) criteria.

We will spur the development of local, inclusive, responsible and low-carbon supply chains.

Action	Indicator	Starting measurement (year/period)	2027 target (Government Sustainable Development Strategy subgoal)
Increase the share of our sustainable procurement. ¹	% of contracts incorporating new sustainability components ²	New indicator	50% (5.4.1)
Increase the business opportunities made available to social economy enterprises.	Number of social economy enterprises with a contract or active order for the current year ³	49 (2023)	72 (5.4.1)

Some of the initiatives in this category

- Ensure that suppliers in targeted purchasing categories have undergone due diligence and apply human rights risk mitigation measures.
- Establish an eligibility criterion related to occupational health and safety and apply it to the supplier selection process by requiring a pass mark in targeted procurement categories.

1. This action targets all contracts entered into by the Direction principale – Approvisionnement stratégique et matériel.

2. Our procurement practices already feature a number of responsible components. This indicator concerns new components such as the circular economy, human rights and reduced GHG emissions.

3. Excluding oil cooperatives.

UN Sustainable Development Goals

Biodiversity

Manage and protect the land and aquatic habitats on our properties that support biodiversity, ensure ecosystem connectivity and incorporate biodiversity-friendly features into our facilities.

We will redouble our efforts to protect, restore and enhance biodiversity in tandem with Indigenous communities and other local communities.

Action	Indicator	Starting measurement (year/period)	2027 target (Government Sustainable Development Strategy subgoal)
Determine the conservation potential of our properties so as to help attain government biodiversity conservation objectives.	Cumulative number of hectares targeted for conservation	New indicator	2027 target to be set in 2025 (2.1.1)
Incorporate improvement or restoration measures aimed at promoting biodiversity in our projects.	% of projects subject to Section 31 of the <i>Environmental Quality Act</i> (EQA) that integrate these measures	New indicator	100% (2.1.2)

Some of the initiatives in this category

- Draw up a biodiversity action plan.
- Develop tools and methods for increasing awareness of the ecological value of our properties and determining their conservation potential.

BIODIVERSITY ACTION PLAN

Hydro-Québec is working on a biodiversity action plan that would enable us to:

- identify commitments and establish targets for protecting and enhancing biodiversity
- promote close collaboration with municipalities and external stakeholders to protect vulnerable or threatened species and areas with high ecological value, all while ensuring grid reliability
- integrate biodiversity protection throughout the activities provided for in the *Action Plan 2035*, from project planning to asset operation
- actively contribute to Québec's efforts to achieve the goals it has set in terms of biodiversity protection

UN Sustainable Development Goals

Sustainable Indigenous communities and other communities

Work to enhance the living environment and collective well-being of all Quebecers by taking their interests into account.

We want to work with Indigenous communities to increase their participation in our energy projects, to turn the latter into sources of sustainable prosperity. We also intend to make room for, value and leverage Indigenous potential and support its development in all our spheres of activity: as a partner, an employer, a supplier and a purchaser of goods and services. In addition, through our activities and programs, we plan to support communities by facilitating their input in regional vitality and promoting access to services and resources that meet their needs.

Action	Indicator	Starting measurement (year/period)	2027 target (Government Sustainable Development Strategy subgoal)
Obtain Gold-level certification in the Progressive Aboriginal Relations (PAR) program.	Certification level	Silver (2023)	Gold (3.2.2)
Support Indigenous women entrepreneurs.	Cumulative financial contribution (\$M)	1 (2023)	5 (3.2.2)
Work with municipalities to implement projects that foster biodiversity in our transmission rights-of-way.	Cumulative number of hectares developed	19.68 (2023)	100 (4.1.1)

Some of the initiatives in this category

- Apply the new social acceptability framework to new generating facilities.
- Promote our guide to [fostering biodiversity in power line rights-of-way](#) (in French only), which we published for municipalities.

ECONOMIC RECONCILIATION

In collaboration with First Nations and Inuit, draw up an economic reconciliation plan that includes partnership opportunities and other means for these communities to draw autonomous sources of income from energy projects that they can allocate to priorities of their own choosing.

UN Sustainable Development Goals

Responsible energy use

Offer innovative energy efficiency programs and activities to encourage our customers to treat electricity as a valuable resource that should be used wisely.

We are working to raise customer awareness of the importance of using less electricity by opting for energy-efficient technologies and adopting responsible consumption habits, particularly during peak periods. We will support them in this by offering financial incentives and advisory services adapted to their needs, all of it in an effort to limit the number of new assets deployed to meet growing demand for electricity.

Action	Indicator	Starting measurement (year/period)	2027 target (Government Sustainable Development Strategy subgoal)
Achieve the 21-TWh energy savings target by 2035 through our energy efficiency programs.	Cumulative terawatthours (TWh) saved	0.84 (2023)	5.15 (1.1.3)
Free up 3,500 MW of electricity that can be shaved or shifted by 2035 through our demand response offers. ¹	Number of megawatts (MW) shifted or shaved	1,871 (2023-2024) ²	2,744 (1.3.2)

Some of the initiatives in this category

- Enhance our incentives to speed up the rollout of energy efficient equipment.
- Expand our rate offerings to encourage desired behaviors.

1. Demand response offerings include dynamic pricing, Hilo products and services, the Demand Response Option and Interruptible Electricity options. Other offers like the Additional Electricity Option also help optimize power demand.
 2. Annual measurement of demand response performance covers parts of two winters.

UN Sustainable Development Goals

Decarbonization

Accelerate the decarbonization of our operations.

In addition to contributing to the decarbonization of Québec through our *Action Plan 2035*,¹ we will develop advanced knowledge of how our operations impact GHG emissions, integrate decarbonization into our decision-making and business processes and influence our suppliers to do likewise.

We will also stimulate the growth of sustainable mobility in Québec and encourage our workforce to shift to travel options that contribute to decarbonization.

Action	Indicator	Starting measurement (year/period)	2027 target (Government Sustainable Development Strategy subgoal)
Increase electricity supply to help reduce the energy intensity of transporting people and goods.	Number of fast-charge stations in Québec for light- and heavy-duty vehicles	896 (2023)	1,800 (4.2.2)
Reduce direct (Scope 1) GHG emissions. ²	% reduction in tonnes of CO ₂ equivalent	362,820 (2015-2020 average)	-11% (5.6.1)
Gradually convert our fleet of gas-powered vehicles to low- or zero-emission models.	Percentage of vehicle fleet electrified ³	39% (2023)	56% ⁴ (5.8.1)

Some of the initiatives in this category

- Continue to work on converting our off-grid systems to renewable, low-carbon energy sources.
- Determine the carbon cost of current internal operations.

1. The reduction of gross GHG emissions through the electrification of transportation, residential and commercial buildings and industrial activities will be on the order of 25 Mt CO₂ eq. in 2035.

2. Including from thermal power plant operation, mobile sources such as vehicle fleets, fuel combustion or other emissions sources. Note that Hydro-Québec uses only renewable energies (zero CO₂-eq. emissions) to meet the heating and electricity needs of its administrative buildings. Hydro-Québec's GHG emissions calculations take into account various factors such as scientific benchmarks and international standards that are currently being revised. Hydro-Québec closely follows the evolution of these parameters and, once they are announced, will be able to chart a new path toward carbon neutrality.

3. Based on the light vehicle fleet (hybrid, electric, plug-in and dual-energy) as at December 31, 2023, excluding light vehicles weighing more than a half-ton and full-size SUVs. There is no commercial offering for such vehicles at this time.

4. This is the target for the year 2026. The 2027 target will be determined in 2025.

UN Sustainable Development Goals

Circular economy

Promote a circular approach to materials and energy to reduce pressure on resources.

In light of our social role and the scope of our operations, we intend to instill a circular value chain and make the circular economy a true business strategy. Such a strategy must focus on reducing the use of raw materials, efficient and sustainable use of materials and energy sources and recirculating resources that have reached the end of their useful life.

Action	Indicator	Starting measurement (year/period)	2027 target (Government Sustainable Development Strategy subgoal)
Implement a plan that sets out our corporate guidelines with regard to the circular economy.	% of progress on the plan	0% (2023)	100% (1.1.2)
Implement a circular economy plan for waste materials, including waste generated from construction, refurbishment and renovation sites.	Cumulative new circular initiatives, including those for waste materials from construction, refurbishment and renovation sites	0 (2023)	3 new measures (5.6.2)

Some of the initiatives in this category

- Develop partnerships, especially with municipalities, to improve our circularity rate for target materials.
- Increase the reclamation rate for materials and the recycling rate for residual materials in our buildings and on our worksites.
- Help implement the government's 2022–2027 circular economy roadmap.

UN Sustainable Development Goals

Responsible governance

Instill sustainability in our teams' DNA so that it is taken into account in our decision-making processes and mechanisms at every link in our value chain.

We want to set the benchmark in responsible governance. That's why we're integrating environmental, social and governance (ESG) criteria into our management practices, decision-making mechanisms and all activities, including the selection process for our partners and suppliers.

Action	Indicator	Starting measurement (year/period)	2027 target (Government Sustainable Development Strategy subgoal)
Assess the sustainability of our projects that are subject to Section 31 of the <i>Environment Quality Act</i> .	% of major projects assessed	0 (2023)	100% (5.1.1)
Integrate sustainability criteria into our donation and sponsorship evaluation and selection processes.	% of donation/sponsorship recipients that meet sustainability criteria	New indicator	80% (5.3.4)

Some of the initiatives in this category

- Incorporate mechanisms and tools into our management processes so that we may seize every opportunity to make projects sustainable.
- Improve the consideration of ESG criteria in our decision-making.

UN Sustainable Development Goals

Our commitment to responsible governance is in line with the 17 UN goals.

Sustainable and resilient infrastructures

Encourage employees to participate in our efforts to adapt to climate change and factor sustainability principles into our building, land and infrastructure life cycle management.

Science and best practices will continue to inform our actions to adapt our operations to climate change. Our efforts in this regard will sync with our other sustainable development goals as we make our value chain more resilient and apply a sustainable outlook to building, operating and safeguarding our infrastructures.

Action	Indicator	Starting measurement (year/period)	2027 target (Government Sustainable Development Strategy subgoal)
Integrate climate change adaptation into our targeted processes. ¹	Number of processes	36 (2023)	68 (5.6.1)
Renew our BOMA BEST ² certificates as per version 4.0 of the applicable standards.	% of renewals meeting 4.0 requirements	0% (2022)	60% (5.7.1)

Some of the initiatives in this category

- Maximize the use of climate and hydrological data to determine the facility design and performance criteria for optimally incorporating climate change into our projects.
- Pursue efforts to obtain our first ENVISION³ designation for the Hochelaga 315/25-kV transformer substation.

1. That is, the processes targeted by the Task Force on Climate-Related Financial Disclosures (TCFD).
 2. BOMA BEST certificates are valid for three years. In 2023, Hydro-Québec carried out activities in 21 certified buildings.
 3. ENVISION provides a consistent, consensus-based framework for assessing infrastructure sustainability and resilience while supporting higher performance through more sustainable choices.

UN Sustainable Development Goals

Human resources

Make occupational health and safety (OHS) a pillar of our corporate performance. Create a work climate where the pooling of ideas and talents constitutes a vital source of energy that is recognized and supported each day.

To these ends, we will continue to work toward making our health and safety culture a source of pride for our teams. We will also deploy measures to promote responsible business practices throughout our workforce. Our emphasis on health extends to encouraging our employees to adopt active transportation, for example.

Action	Indicator	Starting measurement (year/period)	2027 target (Government Sustainable Development Strategy subgoal)
Improve workplace safety by adopting measures to reduce accident risks.	Frequency of work-related accidents involving lost time and/or death, per 200,000 hours worked at Hydro-Québec ¹	1.17 (2023)	0.99 (sans objet)
Increase the share of active, collective or alternative transportation used as compared to single-occupancy vehicle use.	% of modes of transport other than single-occupancy vehicle travel	14% (2023) ²	19% (5.8.2)

Some of the initiatives in this category

- Improve access for all by implementing measures like building adaptation and digital accessibility.
- Improve management of the main hazards—particularly those linked to energy sources—by introducing simple prevention measures consistent with on-the-ground realities.

1. This rate applies to Hydro-Québec employees and thus excludes supplier personnel.

2. Based on a survey conducted with employees who work in buildings able to accommodate at least 150 people.

UN Sustainable Development Goals

Appendix 1: Summary of *Sustainable Development Plan 2024–2028* actions and targets in relation to the Government Sustainable Development Strategy 2023–2028

The table below presents an overview of the actions, indicators and targets of Hydro Québec's *Sustainable Development Plan 2024–2028* as they pertain to subgoals of the Government Sustainable Development Strategy (GSDS) 2023–2028.¹

GSDS subgoal	Action	Indicator	Starting measurement (year/period)	2024 target	2025 target	2026 target	2027 target
Sustainable procurement							
5.4.1 Increase the share of sustainable procurement	Increase the share of our sustainable procurement.	% of contracts incorporating new sustainability components	New indicator	10%	20%	35%	50%
	Increase the business opportunities made available to social economy enterprises.	Number of social economy enterprises with a contract or active order for the current year	49 (2023)	55	60	65	72
Biodiversity							
2.1.1 Enhance and ensure the long-term survival of Québec's protected areas.	Determine the conservation potential of our properties so as to help attain government biodiversity conservation objectives.	Cumulative number of hectares targeted for conservation	New indicator	Adopt a method for establishing conservation potential	Study our properties and set target for 2026-2027	2026 target to be set in 2025	2027 target to be set in 2025
2.1.2 Improve the state of Québec's plant and wildlife species.	Incorporate improvement or restoration measures aimed at promoting biodiversity in our projects.	% of projects subject to Section 31 of the <i>Environmental Quality Act</i> (EQA) that integrate these measures	New indicator	100%	100%	100%	100%

1. The Government Sustainable Development Strategy 2023–2028 is published in French only. Translation of subgoals and other excerpts is provided by Hydro-Québec as a courtesy.

GSDS subgoal	Action	Indicator	Starting measurement (year/period)	2024 target	2025 target	2026 target	2027 target
Sustainable Indigenous communities and other communities							
3.2.2 Support entrepreneurship among women, Indigenous people and people from diverse backgrounds.	Obtain Gold-level certification in the Progressive Aboriginal Relations (PAR) program.	Certification level	Silver (2023)	Gold	Gold	Gold	Gold
	Support Indigenous women entrepreneurs.	Cumulative financial contribution (\$M)	1 (2023)	2	3	4	5
4.1.1 Help municipalities take sustainable action in their jurisdictions.	Work with municipalities to develop projects that foster biodiversity in our transmission rights-of-way.	Cumulative number of hectares developed	19.68 (2023)	40	60	80	100
Responsible energy use							
1.1.3 Support the development of green industries and clean technologies.	Achieve the 21 TWh energy savings target by 2035 through our energy efficiency programs.	Cumulative number of terawatt-hours (TWh) saved	0.84 (2023)	1.77 (+0.93)	2.81 (+1.05)	3.95 (+1.14)	5.15 (+1.20)
1.3.2 Facilitate responsible and local consumption options.	Free up 3,500 MW of electricity that can be shaved or shifted by 2035 through our demand response offers.	Number of megawatts (MW) shifted or shaved	1,871 (2023-2024)	2,152	2,424	2,580	2,744
Decarbonization							
4.2.2 Reduce the energy intensity of transporting people and goods.	Increase electricity supply to help reduce the energy intensity of transporting people and goods.	Number of fast-charge stations in Québec for light- and heavy-duty vehicles	896 (2023)	1,120	1,345	1,575	1,800
5.6.1 Improve sustainability of buildings and infrastructures.	Reduce direct (scope 1) GHG emissions.	% reduction of tonnes of CO ₂ equivalent	362,820 (average of the 2015–2020 period)	-5%	-5%	-9%	-11%
5.8.1 Reduce GHG emissions from government vehicle fleets (light- and heavy-duty models).	Gradually convert our fleet of gas-powered vehicles to low- or zero- emission models.	% of vehicle fleet electrified	39% (2023)	47%	50%	56%	2027 target to be set in 2025

GSDS subgoal	Action	Indicator	Starting measurement (year/period)	2024 target	2025 target	2026 target	2027 target
Circular economy							
1.1.2 Accelerate the development of the circular economy.	Implement a plan that sets out our corporate guidelines with regard to the circular economy.	% of progress on the plan	0% (2023)	0%	33%	66%	100%
5.6.2 Increase sustainable management of construction and renovation sites.	Implement a circular plan for waste materials, including waste generated from construction, refurbishment and renovation sites.	Cumulative new circular initiatives, including those for waste materials from construction, refurbishment and renovation sites	0 (2023)	0	1	2	3
Responsible governance							
5.1.1 Assess the sustainability of government actions.	Assess the sustainability of our projects that are subject to Section 31 of the <i>Environment Quality Act</i>	% of major projects assessed	0 (2023)	100%	100%	100%	100%
5.3.4 Increase the percentage of standardized programs that include sustainability criteria.	Integrate sustainability criteria into our donation and sponsorship evaluation and selection processes.	% of donation/ sponsorship recipients that meet sustainability criteria	New indicator (2023)	15%	25%	50%	80%
Sustainable and resilient infrastructures							
5.6.1 Improve the sustainability of buildings and infrastructures.	Integrate climate change adaptation into our targeted processes.	Number of processes	36 (2023)	44	52	60	68
5.7.1 Improve management of government-generated waste materials.	Renew our BOMA BEST certificates as per version 4.0 of the applicable standards.	% of renewals meeting 4.0 requirements	0% (2023)	25%	35%	45%	60%
Human resources							
N/A	Improve workplace safety by adopting measures to reduce accident risks.	Frequency of work-related accidents involving lost time and/or death, per 200,000 hours worked at Hydro-Québec	1.17 (2023)	1.12	1.08	1.04	0.99
5.8.2 Increase the modal share of active, collective and alternative transportation over single-occupancy vehicle use by government employees.	Increase the share of active, collective or alternative transportation used as compared to single-occupancy vehicle use.	% of modes of transportation other than single-occupancy vehicle travel	14% (2023)	16%	17%	18%	19%

Appendix 2: Some Hydro-Québec plans and policies that contribute to sustainable development

Document name	Guideline or objective	Link to the Government Sustainable Development Strategy 2023–2028 ¹
Action Plan 2035 – Towards a Decarbonized and Prosperous Québec	This plan will allow Hydro-Québec to reduce its greenhouse gas emissions, meet the expected growth in electricity demand related to the energy transition and provide a streamlined, reliable and affordable service.	The Plan contributes directly and indirectly to the five policy guidelines of the Government Sustainable Development Strategy: 1. Make Québec a hub for innovation and excellence in terms of a green, sustainable economy. 2. Take steps to promote and protect nature and health. 3. Encourage all Quebecers to contribute to Québec's sustainable development. 4. Develop communities sustainably. 5. Build a model government that supports innovation.
Our social role policy (in French only)	This policy sets out Hydro-Québec's commitments regarding its social role from a sustainable development and social acceptability perspective.	2.3. Maximize the benefits of nature for the population. 3.1. Ensure an equitable socio-ecological transition. 3.2. Promote equality and diversity in our society. 4.1. Create sustainable, inclusive and user-friendly living environments. 4.3. Build dynamic and innovative communities. 5.3. Invest sustainably in a way that benefits all Quebecers. 5.4. Leverage public markets for sustainable growth
Our environment policy (in French only)	This policy lays out Hydro-Québec's guidelines and commitments with regard to the environment and the judicious use of natural resources from a sustainable development perspective.	1.3. Promote responsible energy use. 2.1. Preserve biodiversity and ecosystem services. 2.2. Improve ecosystem health. 5.6. Improve the environmental performance of public buildings and infrastructures. 5.7. Reclaim residual materials. 5.8. Bring about a shift toward more sustainable modes of travel.
Our acquisition of goods and services and contract management policy (in French only)	This policy sets out Hydro-Québec's commitment to efficiently and responsibly acquiring the goods and services needed for its day-to-day business and strategic operations. These goods and services allow the company to fulfil its basic mission, i.e., to generate, transmit and distribute electricity.	5.3. Invest sustainably in a way that benefits all Quebecers. 5.4. Leverage public markets for sustainable growth.
Electricity supply plan 2023–2032 (in French only)	The supply plan forecasts the electricity needs of Québec customers through 2032 and sets out the means used to meet them, including electricity purchases, energy efficiency initiatives and energy transition projects for off-grid systems.	1.1. Support the transition toward sustainable business models. 1.3. Promote responsible energy use. 5.6. Improve the environmental performance of public buildings and infrastructures.

1. The Government Sustainable Development Strategy (GSDS) 2023–2028 is published in French only. Translation of subgoals and other excerpts is provided by Hydro-Québec as a courtesy.
