Project News

Construction of an underground 315-kV transmission line between Guy and Des Irlandais substations

Dates: September to November 2026

To meet growing demand for electricity and ensure the long-term operability of its facilities on the island of Montréal, Hydro-Québec is building an underground transmission line between Guy substation and the new Des Irlandais substation.

Description of the work

Following the work to build the underground duct banks and rebuild the roadway, new work must be carried out to complete the connection for the commissioning of the underground power system. This phase of work includes pulling and connecting of the electric cables installed in the underground infrastructures.

Dates and areas affected:

- September 14 to 18: Rue Richmond (between rues Notre Dame and William)
- September 14 to November 20: Place des Bassins (cycling path, pedestrian access)
- September 25 to October 30: rue De Montmorency (between the bike path and la rue Saint-Patrick)

Impacts of the work:

- Temporary disruptions affecting traffic, parking, pedestrians and cyclists;
- More workers and machinery;
- Noise and dust during the work.

Mitigation measures:

- Appropriate signage and flaggers or police presence as necessary
- Uninterrupted pedestrian access to residences, businesses and essential services, as well as continued public transit service with stops relocated as necessary

Note: No service interruptions are anticipated as part of the work.
